Her back pain is about 3-4/10 with pain medications. She is taking Morphine ER 45mg three times a day and Oxycodone 10mg BID. She had fup with FH med/onc on 10/23/26.

Her questions for the provider today
How will you know if radiation tx worked? What is the plan moving forward? If further tx is needed, how is that evaluated?

Above info relayed to the provider.

Subjective
She is having nausea that started last week after her second fraction. This did not seem to improve with 1 tab of Zofran. She is now taking scheduled Zofran and Compazine with resolution of her nausea.
Her pain is overall improved and she feels much better than when she first presented during the summer.

Objective

No acute distress
No increased work of breathing

Lab Results

Component	Value	Date	
	WBC	2.04 (L)	10/07/2026

Progress Notes - documented in this encounter

Julia Anne B Suico - 10/07/2026 9:00 AM PDT

Formatting of this note might be different from the original.

47 year old with PMH of ER/PR+, HER2- Metastatic Breast Cancer
Current tx with Ribociclib 600mg PO daily D1-21/28 + Anastrozole + Leuprolide
S/p XRT to sacrum planned 10/1-10/7

Last seen via tm 7/2026 for T1, T4, T5 and T8 vertebral bodies, and known lesions in her entire spine. Recommended urgent kypho, now s/p 9/16/26 T8, S1 kyphoplasty and ablation - path consistent metastatic carcinoma of breast origin.

Rx MS contin, oxycodone, APAP -> gradually weaning

Presents for f/u after kypho.
Completed RT on C spine and initiated tx with Ribociclib
Doing great since kypho, but residual soreness. Improved mobility and functionality. Walking 4-6 miles per day.
She has residual soreness and stiffness at her neck and upper back, but greatly improved. Denies radiculopathy, bowel/bladder control.

Nervous and wanting to know we are monitoring C spine.
Also completed brain MRI "vein that popped up"

Electronically signed by Julia Anne B Suico at 10/08/2026 7:59 AM PDT

Anubhav Gautam Amin - 10/07/2026 9:00 AM PDT

Formatting of this note might be different from the original.
University of Washington Medical Center Neurosurgery
Provider: Anubhav Amin, MD
Visit Date: 10/7/2026

Distant Site Telemedicine Encounter
I conducted this encounter via secure, live, face-to-face video conference with the patient. I reviewed the risks and benefits of telemedicine as pertinent to this visit and the patient agreed to proceed.

Provider Location: On-site location (clinic, hospital, on-site office)
Patient Location: At home
Present with patient: Family member

Use of Ambient Listening:
Was ambient listening technology used during this visit and was verbal consent for recording obtained? **Yes, used in visit. Consent was obtained.**
?

History of Present Illness
Yvonne Kalley Franklin is a 47-year-old female with metastatic breast cancer to bone status post T8 and S1 kyphoplasty with ablation on 09/16/26 who presents for follow-up for residual neck stiffness and questions about interval cervical and brain imaging.

Spinal Metastatic Disease and Postoperative Course:
- Diagnosed with metastatic breast cancer to bone following evaluation for back pain and pathologic vertebral compression fractures in July 2026
- Underwent T8 and S1 kyphoplasty with ablation on 09/16/26; pathology confirmed metastatic carcinoma of breast origin
- Marked improvement in pain and mobility since surgery
- Ambulates 4-6 miles per day
- Remains on morphine and oxycodone, currently tapering

Neck and Upper Back Symptoms:
- Persistent mild neck and upper back stiffness and tightness
- Symptoms substantially improved compared to prior months
- No sharp pain
- No arm pain, radiation, numbness, tingling, weakness, bowel or bladder dysfunction, or balance problems

Pain Management:
- Continues to use morphine and oxycodone, currently tapering doses

Imaging and Surveillance Concerns:
- No cervical spine imaging since July 2026
- Requests surveillance cervical spine imaging, as upcoming PET-CT in November 2026 may not include the neck
- Requests second opinion on brain MRI from 09/24/26, which showed a 1-2 mm punctate focus described as possibly a vein

Oncologic Therapy and Radiation Side Effects:
- Currently on ribociclib
- Completing sacral radiation
- Experienced nausea and vomiting early in radiation course, now improved

IMAGING:

Results
Radiology
Cervical spine MRI (07/2026): No new lesion.
Brain MRI (09/24/2026): No intracranial metastatic disease. Single punctate focus in the left precentral gyrus, likely vascular. (Independently interpreted)

Pathology
T8 and S1 vertebral pathology (kyphoplasty/ablation specimen) (09/16/2026): Metastatic carcinoma consistent with breast primary.

IMPRESSION / ASSESSMENT:

	ICD-10-CM	
1. Secondary malignant neoplasm of bone (HCC)	**C79.51**	**CT C Spine w Contrast**
	CANCELED: CT C Spine w Contrast	

	CANCELED: CT C Spine wo Contrast
	CANCELED: CT C Spine w Contrast
	CANCELED: CT C Spine wo Contrast

Assessment & Plan
Secondary malignant neoplasm of bone
Osseous metastatic breast carcinoma involving spine and sacrum, managed with ribociclib and completing sacral radiation. No acute neurologic deficits.
- Order CT cervical spine to pair with November PET/CT for cervical surveillance.
- Coordinate CT cervical spine with November imaging.
- Discuss timing and need for repeat brain MRI surveillance with Medical Oncology.
- Follow up to review November imaging results around Thanksgiving, approximately one week after scan.

Pathologic vertebral compression fractures
Pathologic vertebral compression fractures secondary to metastatic breast cancer, status post T8 and S1 kyphoplasty with ablation, with marked symptomatic improvement and increased mobility. Spine stabilized after cement augmentation.
- Continue current oncologic treatment plan including post-procedure radiation as coordinated by Dr. Kang and Dr. Som
- Contact oncology and spine team urgently for new severe sharp pain, radicular arm symptoms (numbness, tingling, shooting pain), or weakness.

Neck pain
Persistent but improved cervical stiffness and tightness without radicular or myelopathic symptoms; managed conservatively.
- Maintain physical activity, exercise, and neck stretching; no activity restrictions.
- Order CT cervical spine to monitor cervical involvement (attempt to pair with November imaging).
- Seek prompt evaluation for severe, intense, or new neck pain, symptoms radiating down arms (numbness, tingling, shooting pain), or weakness.

Prior EMR records reviewed as available and clinically relevant. All questions answered. Discharge and follow up instructions were discussed with the patient. The patient fully understands and is in agreement with the plan.

Number and Complexity of Problems Addressed
1 acute, uncomplicated illness or injury
1 acute or chronic illness or injury that poses a threat to life or bodily function

Amount and/or Complexity of Data to be Reviewed and Analyzed
Independent interpretation of a test performed by another physician/other qualified health care professional (not separately reported)

Risk of Complications and/or Morbidity or Mortality of Patient Management
Moderate

Portions of this chart were made using voice recognition software.

GENETIC TEST RESULT - Phone call

I called on 10/5/2026 and spoke with Yvonne Kalley Franklin to disclose the results of her recent germline (inherited) genetic testing.

Result: NEGATIVE. This test did not identify any pathogenic variants known to cause disease.

Lab: Invitae
Test: Hereditary Breast Cancer Guidelines-Based Panel (13 genes total)

Genes Analyzed: ATM*, BARD1, BRCA1, BRCA2, CDH1, CHEK2, NF1*, PALB2, PTEN*, RAD51C, RAD51D, STK11, TP53

This result has the following implications for Yvonne:

1. **This is a normal result.** The reason for Yvonne's personal history of breast cancer remains unknown. This negative result greatly reduces the likelihood of a genetic cause.

2. This result greatly reduces the likelihood of a cancer predisposition syndrome in Yvonne.

3. This result does not inform/change current recommendations for her cancer treatment.

4. We discussed that Yvonne's genetic testing only covered genes associated with breast cancer. There are several of the genes above that overlap with risks for ovarian, prostate, pancreatic, melanoma, and some other cancers. However, more cancer-related testing is available to her.Yvonne is aware up to 70 other cancer genes could be assessed for free by Invitae until **March 3, 2027.** Yvonne can contact me if she is interested. At this time, she is not interested in expanded testing.

5. No additional germline genetic testing is recommended for Yvonne at this time. She is recommended to follow-up with our genetics clinic in 3-5 years to see if additional genetic testing is available and/or recommended (scheduling # 206-606-6990).

6. *Yvonne* has the possibility of enrolling in clinical DNA biobanking for future genetic testing. *Yvonne* is eligible as an established patient at Fred Hutch based on her underlying diagnosis. There would be no extra charges for *Yvonne* to clinically bank their DNA. If *Yvonne* voices interest in the program, I will place a referral for them and coordinator will reach out to provide more information on the procedure, obtain consent, and schedule the blood sample collection. The coordinator can assist with answering *Yvonne*'s questions.

1. Referral placed today.

This result has the following implications for Yvonne's relatives:

1. Yvonne's relatives are encouraged to share the family history of cancer(s) with their PCPs to help receive personalized recommendations for cancer screening. Yvonne is encouraged to share a copy of her testing report with her relatives as well.

2. Genetic testing is NOT recommended for Yvonne's relatives who are unaffected (ie. No cancer histories) since we did not identify a clear genetic cause for Yvonne's cancer.

3. Yvonne's close female relatives, such as her daughter and mother, are encouraged to talk with their doctors about increased breast cancer surveillance (starting at age 37) based on the family history. The National Comprehensive Cancer Network (NCCN) recommends that for individuals at greater than 20 percent average lifetime risk of invasive breast cancer, screening recommendations include:

1. *Clinical breast exams*: Every 6 to 12 months starting 10 years younger than the youngest breast cancer case in the family;
2. *Mammograms*: Every year starting 10 years younger than the youngest breast cancer case in the family; and
3. *Breast MRIs*: Every year starting 10 years younger than the youngest breast cancer case in the family.

All of Yvonne's questions were answered over the phone today. I will send a copy of this summary letter and the genetic testing result to Yvonne. She may contact our clinic if questions about the results arise in the future.

Miscellaneous Notes - documented in this encounter

Telephone Encounter - Jackie K - 10/05/2026 12:17 PM PDT

Formatting of this note might be different from the original.

Pt sent in a my chart message regarding N/V post her radiation tx.
Spoke with pt today while in the clinic.
RN had instructed pt to take Zofran an hour prior to radiation tx. Then post radiation, can take compazine as needed.
Recommended to take Zofran and compazine RTC until radiation is complete to help. Pt stated she did not expect to have N/V and has been miserable with this. Pt was good with plan with taking antiemetics RTC until radiation is complete. Pt has a fup visit with rad onc provider on Wednesday 10/7/26. Instructed to call back if antiemetics do not help.

Electronically signed by Jackie K at 10/05/2026 12:25 PM PDT

Telephone Encounter - Claire K - 10/02/2026 5:08 PM PDT

Formatting of this note might be different from the original.

Oncology Telephone Triage Note

Subjective / Visit Information:

Reason for Call: Vomiting and Nausea

Assessment and Plan:

Call Summary: Patient is on her day 2 of radiation. She had nausea after her first dose of radiation, after her second dose today she started to vomit. She has had 3 episodes of emesis since this afternoon. She denies fevers, chills, abdominal pain, dizziness, feeling like her heart is racing, SOB, CP, urinary or orther GI symptoms. She reports that she has not eaten since this morning and has been drinking minimally . She took Compazine this morning and took Zofran right before she called triage. Recommended that she let the Zofran set in. If she remains nauseated, take another Compazine. If she has another episode of emesis we could consider doing hydration. State we would call the patient back in 45 minutes to check in. Patient reporting feeling a little better and will take another Compazine. Sent patient information about Nausea and Radiation Nutrition via MyChart.

Additional documentation may exist in Flowsheets or Education Activity

?

ID/CC: 47 year old female with de novo metastatic breast cancer with osseous metastases. Diagnosed 07/2026. Admission 7/27/26 for pain. Currently on Lupron and anastrozole. Awaiting start of ribociclib. ACE visit 8/12/26 for increased pain. Kyphoplasty 9/16/26. Started radiation to lower spine yesterday.

Treatment goal	[No plan goal]
Plan Name	OP Ribociclib + Endocrine Therapy
Start Date	8/15/2026
End Date	11/7/2026 (Planned)

History of Present Illness
Yvonne Kalley Franklin is a 47 year old female with cancer-related pain on chronic opioids who presents for opioid dose reduction counseling.

Started radiation therapy yesterday to the lower back and sacrum at L5 and S1-S3 with a planned 5-day course. Since starting, she has had marked fatigue and nausea yesterday, requiring an antiemetic after previously stopping nausea medications while on Kisqali; she took another antiemetic dose this morning for prophylaxis. For a couple days prior to radiation, she had mild fatigue and generalized soreness with a flu-like feeling that has since resolved. She is aware diarrhea can be a radiation side effect but has not had diarrhea.

She takes morphine 45 mg three times daily and oxycodone 10 mg three times daily, taken with morphine, decreased from 15 mg three times daily. She is interested in safely reducing opioids and has discussed tapering options with Amy Brustkern. With prolonged standing, she has diffuse low back irritation that is unpleasant but not acute pain and improves with sitting.

She uses Miralax for opioid-associated constipation; it was initially difficult to tolerate but she now has regular bowel movements.

Assessment & Plan
Cancer related pain
Chronic low back and sacral pain controlled on morphine and oxycodone with mild positional discomfort. No acute exacerbation. She requested opioid dose reduction. Discussed opioid discontinuation syndrome symptoms including jitteriness, anxiety, diarrhea, goosebumps, excessive tearing and salivation. Instructed her to contact clinic if symptoms occur rather than self-adjusting oxycodone. If withdrawal occurs, will reassess tolerance and adjust opioid dosing.
- Change oxycodone 10 mg TID to PRN for moderate or greater pain, including severe pain.
- Continue morphine 45 mg TID.
- Monitor pain control and functional impact over the next week to guide further tapering.
- Follow up 10/15/2026 at 3:00 PM; physician fellow Carly will be working in clinic.

Nausea and fatigue
Acute fatigue and nausea temporally associated with initiation of radiation therapy to L5 and S1 to S3. Etiology uncertain, possibly radiation related.
- Continue antiemetic as needed for nausea.

Opioid-induced constipation
Constipation controlled on polyethylene glycol. Bowel regimen stable. Planned to avoid preemptive bowel regimen changes during opioid taper and adjust based on symptoms and opioid dose changes.
- Continue polyethylene glycol.
- Reassess bowel regimen during opioid taper and adjust as needed.

Palliative care encounter
Ongoing palliative care focused on symptom management and opioid tapering.
- Follow up with Amy Brustkern on 10/21/2026.
- Interim palliative care follow up 10/15/2026 at 3:00 PM.

I spoke with the patient via telehealth new for this encounter. I spent a total time of 20 minutes with the patient, of which more than 50% was spent counseling as outlined in this note. Indirect time spent preparing for the visit, charting, and care-coordination was 10 minutes for total time spent 30 minutes.

Oral Chemotherapy Monitoring Program

Oral chemotherapy management per FHCC CDTA

Yvonne Kalley Franklin is a 47 year old female contacted for follow up by phone for oral chemotherapy treatment monitoring.

Indication: ER/PR+, HER2- Metastatic Breast Cancer
Treatment Plan/Dose: Ribociclib 600mg PO daily D1-21/28 + Anastrozole + Leuprolide
Cycle: Subsequent Review-Refill Rx

Cycle Start Date: 09/12/26
Anticipated Next Cycle Start Date: 10/10/26

Treatment delayed or held?: Yes
Reason: XRT to sacrum planned 10/1-10/7, planning to start holding ribociclib 9/30, will miss 4 doses before her off week.

Problem list

Patient Active Problem List

Diagnosis	
•	Secondary malignant neoplasm of bone (HCC)
•	Neck pain
•	Cancer related pain
•	Breast cancer metastasized to bone, unspecified laterality (HCC)
•	Acute bilateral thoracic back pain
•	Pathologic compression fracture of vertebra (HCC)
•	Metastatic malignant neoplasm (HCC)
•	Cancer, metastatic to bone (HCC)

Allergies Review of patient's allergies indicates:

Allergies

Allergen	Reactions	
•	Fentanyl	Other
		Isolated PVCs *8/20/2026 states took Fentanyl without incident.* *9/16/2026 took fentanyl without incident*
•	Propofol	Palpitations and Other
		PVC's *Palpitation* *9/16/2026 took propofol without incident*

Medications

Current Outpatient Medications

Medication	Instructions	
•	acetaminophen (TYLENOL)	975 mg, Every 8 hours scheduled
•	albuterol HFA 108 (90 Base) MCG/ACT inhaler	2 puffs, Every 4 hours PRN
•	anastrozole (ARIMIDEX)	1 mg, Oral, Daily
•	cholecalciferol (VITAMIN D-3)	4,000 units, Daily
•	lidocaine viscous 2 % mouth/ throat solution	5 mL, Oral, 4 times daily PRN
•	morphine ER (MS CONTIN)	30 mg, Oral, Every 8 hours scheduled, Take with a 15 mg tablet for a total of 45 mg every 8 hours
•	morphine ER (MS CONTIN)	15 mg, Oral, Every 8 hours scheduled, Take with a 30 mg tablet for a total of 45 mg every 8 hours
•	naloxone 4 MG/0.1ML nasal spray	Use 1 spray in one nostril for suspected opioid overdose. Call 911. If unresponsive in 2 to 3 minutes, repeat with new naloxone nasal spray in opposite nostril.
•	ondansetron (ZOFRAN)	8 mg, Every 8 hours
•	oxyCODONE	10 mg, Oral, Every 3 hours PRN
•	pantoprazole (PROTONIX)	40 mg, Oral, Daily empty stomach
•	polyethylene glycol 3350 (MIRALAX)	17 g, Daily
•	prochlorperazine (COMPAZINE)	10 mg, Oral, Every 6 hours PRN
•	propranolol (INDERAL)	10 mg, Daily
•	ribociclib (600 mg dose) (KISQALI)	600 mg, Oral, Daily, Take on days 1 to 21 followed by 7 days off. Repeat every 28 days.
•	senna (SENOKOT)	17.2 mg, Oral, Nightly PRN
•	tretinoin 0.025 % cream	1 application, 3 times weekly

Medication History
Pt reports changes to their medication on med list: No

Possible drug interactions:
Rx Interactions
Clinically relevant drug interactions identified?: No

Adherence Assessment:
Rx-Adherence
Was adherence assessed during this encounter?: Yes
Patient reported X missed doses in the last month: 0
Patient reported taking incorrect dose in the last month: No
Concerns for Adherence?: No

Symptom/Toxicities Assessment:
Patient reports the following side effects:
Side effects to report?: Yes

General: Fatigue: Grade 1 (Overall feeling a bit more fatigued during this past week of ribociclib, however, not impacting her day-to-day activities. Will CTM.);

Gastrointestinal: Nausea: -- (Nausea has improved, reports no longer need Zofran prior to doses but has on hand for PRN needs.);

Interventions and Follow-up Plan:

Plan: 9/25 labs reviewed and WNL to continue ribociclib, XRT to sacrum planned 10/1-10/7, planning to start holding ribociclib 9/30, will miss 4 doses before her off week.Will repeat labs after completion of XRT, if WNL will plan to start next cycle of ribociclib as planned on 10/10.

Follow-up Dates:
Date of next outreach:: 10/08/26
Next Outreach type:: Phone
Date of next pharmacist lab review:: 10/07/26
Next refill due: 11/20/26
Reference: MONALEESA-2

FRED HUTCHINSON CANCER CENTER
BREAST ONCOLOGY CLINIC NOTE

Use of Ambient Listening:
Was ambient listening technology used during this visit and was verbal consent for recording obtained? **Yes, used in visit. Consent was obtained.**
?

Patient: Yvonne Kalley Franklin
DOB: 6/17/1979
MRN: U4772842

ATTENDING ONCOLOGIST:
Patient Care Team:
Purcell, William Thomas, MD as Oncologist (Hematology-Oncology)
Symonds, Lynn Katherine, MD as Oncologist (Hematology-Oncology)

IDENTIFICATION AND CHIEF COMPLAINT:
Yvonne Kalley Franklin is a 47 year old female with de novo metastatic breast cancer (ER+/PR+/HER2-) currently on OS+AI+ribociclib here for follow-up.

CURRENT THERAPY:
Ribociclib 600 mg day 1-21 q 28 days
Anastrozole 1 mg daily
Lupron q 4 weeks
Zometa q 12 weeks

ONCOLOGIC HISTORY:
-February 2026: Developed back pain which got progressively worse
-7/1/26: MRI spine showed expansile lesions in T1, T5, T8-T10 with expansile element in T10
-7/13/26: CT chest/abdomen/pelvis showed diffuse bony lesions throughout spine and pelvis and left 11th rib fracture as well as a few scattered lung nodules.
-7/21/26: PET-CT w FDG lesions in L breast, R axilla, FDG avid osseous lesions, compression fracture.
-7/22/26: L breast core biopsy showed invasive lobular carcinoma, ER+ (91-100%), PR+ (91-100%), HER2- (1+ by IHC), Ki-67 21-30% , Right axilla LN biopsy showed metastatic carcinoma
-7/24/26: Right iliac crest biopsy showed metastatic carcinoma
-7/27/26-7/30/26: Admitted for pain control, she received palliative radiation with 800 cGy over 1 fraction to the right hip joint, started on lupron and anastrozole, also received zometa as an inpatient
-8/15/26: Start Ribociclib

INTERVAL HISTORY:
Last clinic visit 9/11/2026 .
History of Present Illness
Yvonne Kalley Franklin is a 47 year old female with metastatic hormone receptor-positive, HER2-negative breast cancer with bone metastases who presents for oncology follow-up during her second cycle of ribociclib.

She is two weeks into her second cycle of ribociclib and reports significant improvement in overall well-being compared to the first cycle. Previously, she experienced poor appetite and frequent nausea requiring antiemetic medication, but now she has regained appetite, feels hungry, and has discontinued antiemetics without recurrence of nausea. Pain following recent outpatient spinal surgery was initially severe but has improved substantially and is now almost nonexistent. She is eating and drinking well with no issues related to oral intake.

Over the past two days, she has experienced increased fatigue, particularly in the afternoons. During the first cycle of ribociclib, she had significant exhaustion, but overall energy levels have been better this cycle until the recent onset of fatigue. She is not yet on her break week for ribociclib and anticipates starting it in about a week. She continued ribociclib through her recent spinal surgery after confirming with her care team that it was appropriate.

She underwent outpatient spinal surgery and was discharged the same day. She completed a simulation for radiation yesterday. She is also receiving Zometa for bone health and Lupron as part of her ongoing therapy.

Recent imaging includes an MRI brain, which showed one area of enhancement; follow-up imaging is planned. She has a follow-up with neurosurgery scheduled for October 7. She expresses concern about prior lesions in the cervical, thoracic, and lumbar spine, including compression fractures at T4 and T8, and wants to ensure these areas are monitored in future imaging. She recalls prior imaging showed bone lesions with more than 50% density loss in some areas and disc protrusions in the cervical spine not related to malignancy.

She is tolerating the current regimen well. She discussed with the clinician the possibility of holding ribociclib during radiation.

REVIEW OF SYSYEMS:
A complete review of systems was conducted and was negative in detail except as described above.

MEDICATIONS:
Current Medications

ALLERGIES:
Review of patient's allergies indicates:

Allergies

Allergen	Reactions	
•	Fentanyl	Other
		Isolated PVCs *8/20/2026 states took Fentanyl without incident.* *9/16/2026 took fentanyl without incident*
•	Propofol	Palpitations and Other
		PVC's *Palpitation* *9/16/2026 took propofol without incident*

IMAGING:
No orders to display

ASSESSMENT AND PLAN:
Yvonne Kalley Franklin is a 47 year old female with diagnosis of de novo metastatic breast cancer.

#Metastatic Breast Cancer:
-- ribociclib 600 mg day 1-21 q 28 days
-- anastrozole 1 mg daily
-- tolerating well overall with plan to continue as long as therapy is working and they are tolerating
-- plan for restaging scans 11/2026
-- NGS testing drawn today and pending
-- follow up prior to the next cycle with labs
-- talked with rad onc- hold ribo during XRT, RN to let pt know. Will resume as planned with next cycle

#Bone mets:
-- currently on zometa q 12 weeks
-- no sign of ONJ, encourage good oral health and regular dental checks
-- Vit D 2000 IU and Calcium 1000-1200 mg daily
-- S/P 9/16/26 T8, S1 kyphoplasty and ablation - path consistent metastatic carcinoma.

#MRI brain:
-- There is a tiny 1 to 2 mm focus of enhancement along the left precentral gyrus visible on the turbo spin-echo axial images (series 1601, image 143) but not identified on the SPGR postcontrast or FLAIR images and appears somewhat linear on the sagittal turbo spin-echo reconstructions (series 1603, image 73) and most likely represents an incidental prominent vein however attention this region may be helpful on future scans. There is no correlating enhancement or apparent vessel on the July 27, 2026 CTA.
-- no overt mets, will repeat to assess if this is a vessel with next restaging.
-- ordered for 11/2026

#pain management:
-- s/p palliative RT to right hip joint.
-- Following with palliative care for pain management.

#Genetics:
-- Genetic testing done and pending - will follow with counselor when back

Assessment & Plan
Cancer related pain
Pain significantly improved post-spinal surgery, currently minimal. Ongoing monitoring warranted.
- Monitor pain symptoms and functional status at each visit.

Drug-induced neutropenia
Neutropenia secondary to ribociclib therapy; neutrophil count 1.46, within acceptable parameters. No anemia or thrombocytopenia.
- Monitor CBC and neutrophil count regularly.
- Continue ribociclib at current dose, holding during radiation, then resume.
- Monitor for signs of infection or further cytopenias.

Fatigue
Fatigue improved compared to first cycle of therapy, recent onset of afternoon fatigue. Likely multifactorial, related to systemic therapy, recovery from surgery, and upcoming radiation. Not anemic, laboratory parameters stable.
- Monitor fatigue symptoms and provide reassurance regarding expected side effects of therapy and radiation.
- Encourage rest and self-care, especially approaching her break week from ribociclib.

DISPOSITION:
Provider follow up prior to next cycle with labs
Encouraged to call for new or worsening symptoms

Medical Decision Making is HIGH COMPLEXITY due to the following:
Chronic illness with severe exacerbation, progression, or side effects of treatment
Diagnosis poses a threat to life or bodily function in the near future

Currently on drug therapy requiring intensive monitoring for toxicity

Results - documented in this encounter

Brain MRI (MRI BRAIN TUMOR/METASTASIS) - Final result (09/24/2026 7:21 PM PDT)

Anatomical Region	Laterality	Modality
Brain	N/A	Magnetic Resonance

Specimen (Source)	Anatomical Location / Laterality	Collection Method / Volume	Collection Time	Received Time
			09/25/2026 12:03 AM PDT	

Impressions

09/25/2026 12:13 AM PDT
1. Essentially negative brain MRI without evidence of metastases or cause of headaches identified.

Narrative

09/25/2026 12:13 AM PDT
This result has an attachment that is not available.
EXAMINATION:
MRI BRAIN TUMOR/METASTASIS

CLINICAL INDICATION:
breast cancer, HA , eval for CNS mets
Secondary malignant neoplasm of bone

TECHNIQUE:
MRI Head without and with contrast: Tumor (Primary) (B 2PT)
Non-contrast: Axial T1, T2, DWI, Post-contrast : Sagittal 3D FLAIR. Sagittal, axial and coronal T1

CONTRAST:
GADOTERIDOL 279.3 MG/ML IV SOLN,11 mL Intravenous,09/24/2026 1921

COMPARISON:
Head CT August 16, 2026 and head CT/CTA July 27, 2026..

FINDINGS:
MASS EFFECT & VENTRICLES: No shift. The lateral ventricles are symmetric. The ventricles, sulci and cisterns are normal.
BRAIN: There are several tiny periventricular and deep white matter foci of high FLAIR signal. These are nonspecific but most commonly incidental and related to age related microvascular changes. The brain parenchyma is otherwise unremarkable. No hemorrhage or mass lesion is seen .
ENHANCEMENT: There is a tiny 1 to 2 mm focus of enhancement along the left precentral gyrus visible on the turbo spin-echo axial images (series 1601, image 143) but not identified on the SPGR postcontrast or FLAIR images and appears somewhat linear on the sagittal turbo spin-echo reconstructions (series 1603, image 73) and most likely represents an incidental prominent vein however attention this region may be helpful on future scans. There is no correlating enhancement or apparent vessel on the July 27, 2026 CTA.
VASCULAR: Cavernous carotid, vertebral, and other intracranial vascular flow voids are normal
EXTRA-AXIAL: Extra-axial spaces are normal.
EXTRA-CRANIAL: Skull and facial bones are normal. Sinuses and mastoids are clear with incidentally noted minor right maxillary sinus small mucous retention cysts.. Orbits are normal.

Progress Notes - documented in this encounter

Jackie K - 09/24/2026 8:30 AM PDT

Formatting of this note might be different from the original.

Radiation Treatment Plan:

Consenttoday
SIMtoday
RN Teachtoday

Skin Care:
Addressed not to put anything 2 hours before each radiation treatment. Written information provided.
Hydrogel or Aquaphor given: No

Radiation Treatment Site: Sacrum

# of Fractions: 5

Patient Questionnaire: completed
Social worker referral: Not needed at this time
Nutrition referral: Not needed at this time

Pt does not have a pacemaker.

Pt had recently received radiation treatment to her spine.
I met the patient for the teach, accompanied by husband, Mark. Radiation oncology information was discussed and provided with written materials. Reviewed clinic procedures, radiation side effects- fatigue,skin irritation, possible pain flare, and loose stools and how to contact the clinic. Business cards provided.

She verbalized an understanding of her SIM, treatment schedule, optimal self-care, and our contact information during and after-hours for urgent needs.

Electronically signed by Jackie K at 09/24/2026 9:11 AM PDT

Felicia Lew - 09/24/2026 8:00 AM PDT

Formatting of this note might be different from the original.

Radiation Oncology Consent Note

This visit was to sign consent. Please see prior note for HPI and plan.

Yvonne Kalley Franklin is a 47 year old female with metastatic Lt breast cancer (ER+/PR+/Her2-) diffusely to bone with lesions along the entire spinal axis with diffuse T-spine pain (index lesions C4, C6, T1, T4, T5, T8 with compression fractures <25%) s/p 8 Gy x1 to C4-T11 on lupron, anastrozole, ribociclib since Jul-Aug '26

Yvonne was accompanied by her husband. She reports no pain even with movement. She had mild discomfort along her left buttocks after the kyphoplasty that is improving.

There were no vitals taken for this visit.

-CT-simulation
-Plan to start radiation 10/1

Felicia Lew, MD, DVM

Progress Notes - documented in this encounter

Brenda Rae Kline - 09/24/2026 11:15 AM PDT

Formatting of this note might be different from the original.

I called and talked to Ms. Franklin. She tells me the original pain is gone. She was having quite a bit of soreness for a couple days after the procedure, but she could tell it was not her original pain. It has subsided quit a bit. She is doing well. No concerns. I reminded her of her follow up on 10/30, but told her to contact us if she has concerns prior to her visit.
She verbalized understanding and agreement with plan.

I spent a total of 10 minutes for the patient's care on the date of the service.

Distant Site Telemedicine Encounter
I conducted this encounter via secure, live, audio only conference with the patient. I reviewed the risks and benefits of telemedicine as pertinent to this visit and the patient agreed to proceed.

Provider Location: On-site location (clinic, hospital, on-site office)
Patient Location: At home
Present with patient: No one else present

Electronically signed by Brenda Rae Kline at 09/24/2026 11:18 AM PDT

Medications at Time of Discharge - documented as of this encounter

Medication	Sig	Dispense Quantity	Last Filled	Start Date	End Date
acetaminophen 325 MG tablet	Take 3 tablets by mouth every 8 hours.			07/30/2026	
albuterol HFA 108 (90 Base) MCG/ACT inhaler	Inhale 2 puffs by mouth every 4 hours as needed for shortness of breath/wheezing.				
anastrozole 1 MG tablet	Take 1 tablet by mouth daily.	30 tablet		08/21/2026	
cholecalciferol 50 mcg (2,000 unit) capsule	Take 2 capsules by mouth daily.				
citalopram 20 MG tablet	Take 1 tablet by mouth daily.			08/05/2026	
cyclobenzaprine 10 MG tablet	TAKE 1/2 TO 1 TABLET BY MOUTH THREE TIMES DAILY AS NEEDED FOR MUSCLE SPASMS			04/24/2026	
Lidocaine 10 % cream	Apply 1 g topically.			07/13/2026	
lidocaine viscous 2 % mouth/ throat solution	Take 5 mL by mouth 4 times a day as needed (for throat pain). To avoid numbing tongue, use straw/applicator to apply to back of throat).	200 mL		08/06/2026	
meloxicam 15 MG tablet				05/12/2026	
naloxone 4 MG/0.1ML nasal spray	Use 1 spray in one nostril for suspected opioid overdose. Call 911. If unresponsive in 2 to 3 minutes, repeat with new naloxone nasal spray in opposite nostril.	2 each		07/27/2026	07/27/2027
ondansetron 8 MG tablet	Take 1 tablet by mouth every 8 hours.				
pantoprazole 40 MG EC tablet	Take 1 tablet by mouth daily on an empty stomach.	20 tablet		08/06/2026	
polyethylene glycol 3350 17 g packet	Take 1 packet by mouth daily. Dissolve in 4-8 ounce water.				
prochlorperazine 10 MG tablet	Take 1 tablet by mouth every 6 hours as needed.			07/24/2026	
propranolol 10 MG tablet	Take 1 tablet by mouth daily.				
tretinoin 0.025 % cream	Apply 1 application topically 3 times a week. Apply to face.				
morphine ER 15 MG ER tablet	Take 1 tablet by mouth every 8 hours. Take with a 30 mg tablet for a total of 45 mg every 8 hours	90 tablet		09/08/2026	10/05/2026
morphine ER 30 MG ER tablet	Take 1 tablet by mouth every 8 hours. Take with a 15 mg tablet for a total of 45 mg every 8 hours	90 tablet		09/08/2026	10/05/2026
oxyCODONE 10 MG tablet	Take 1 tablet by mouth every 3 hours as needed for moderate pain.	100 tablet		09/23/2026	10/26/2026
prochlorperazine 10 MG tablet	Take 1 tablet by mouth every 6 hours as needed for nausea/ vomiting.	50 tablet		08/21/2026	09/25/2026
ribociclib (600 mg dose) 200 MG tablet therapy pack	Take 3 tablets by mouth daily. Take on days 1 to 21 followed by 7 days off. Repeat every 28 days.	63 tablet		09/12/2026	11/06/2026
senna 8.6 MG tablet	Take 2 tablets by mouth at bedtime as needed for constipation.	60 tablet		09/23/2026	10/05/2026

Results - documented in this encounter

MRI L SPINE WO/W CONTRAST - Final result (09/24/2026 7:21 PM PDT)

Anatomical Region	Laterality	Modality
L-spine	N/A	Magnetic Resonance

Specimen (Source)	Anatomical Location / Laterality	Collection Method / Volume	Collection Time	Received Time
			09/25/2026 4:59 PM PDT	

Impressions

09/25/2026 9:22 PM PDT

In comparison to MRI lumbosacral spine 7/27/2026:
1. Accounting for differences in technique, similar appearance and extent of multilevel diffuse enhancing osseous metastasis with epidural extension as detailed above.
2. Most notably, expansile soft tissue within S2 and S3 with ventral epidural extension and mild deformation of the ventral thecal sac, as well as extension into the right S2 neuroforamina.
3. Slightly improved encasement of the right S2 nerve root at the level of the foramina.

The following findings are so common in normal, pain-free volunteers that while we report their presence, they must be interpreted with caution and in the context of the clinical situation. Among people between the age of 40 and 60 years who do not have back pain, an MRI will find that about:
* 8 in 10 have disk degeneration
* 7 in 10 have disk signal loss (desiccation)
* 6 in 10 have disk height loss
* 6 in 10 have a bulging disk
* 3 in 10 have an annular fissure
* 3 in 10 have a disk protrusion

Note that even 3 in 10 means that the finding is quite common in people without back pain.
(AJNR 2015; 6:811-6)

ATTENDING FINAL REVIEW:

I agree with the preliminary report.

I have personally reviewed the images and agree with the report (or as edited).

Narrative

09/25/2026 9:22 PM PDT

This result has an attachment that is not available.

Narrative

EXAMINATION:
MRI L SPINE WO/W CONTRAST

CLINICAL INDICATION:
metastatic Lt breast cancer (ER+/PR+/Her2-) diffusely to bone with lesions along the entire spinal axis with diffuse T-spine pain s/p 8 Gy x1 to C4-T11, kyphoplasty to T8 and S1 on 9/16, SBRT planning, also with new sacrum pain

TECHNIQUE:
MRI Lumbar Spine without and with contrast for radiation treatment planning. FOV centered at treatment level.
Pre Contrast: 2D T1, 3D T1, 3D T2, Cardiac Triggered BFFE, DTI
Post Contrast: DCE T1, 3D T1 Fat Sat

CONTRAST:
GADOTERIDOL 279.3 MG/ML IV SOLN,11 mL Intravenous,09/24/2026 1921

COMPARISON:
MRI lumbosacral spine 7/27/2026

FINDINGS:
ALIGNMENT: Normal
MARROW: Diffuse T1 hypointense, enhancing osseous metastasis. Redemonstrated pathologic compression deformity of the right aspect of the L5 vertebral body. The vertebral body heights are otherwise well-maintained.
DISCS: Mild multilevel disc height loss and disc desiccation.
CORD: Conus ends at L2. Visualized cord and cauda equina are normal.
PARAVERTEBRAL SOFT TISSUES: Normal
ENHANCEMENT: Extraosseous extension of enhancing tumor as detailed below:
* Similar ventral epidural extension at L2, L3, and L5 (right aspect) without deformation of the thecal sac.
* Similar ventral epidural extension at S1 with mild indentation of the ventral thecal sac.
* Similar expansile enhancing soft tissue within S2 and S3 with ventral epidural extension and mild indentation of the ventral thecal sac, as well as extension into the right S2 neuroforamina. Slightly improved encasement of the right S2 nerve root at the level of the foramina.

AXIAL DISCS, DURAL COMPRESSION & FORAMINA: As above. Otherwise, no high-grade central canal or foraminal stenosis.

FRED HUTCHINSON CANCER CENTER NUTRITION NOTE

GENERAL INFORMATION

Care Team:
Medical Oncologist: Purcell, William Thomas, MD
Symonds, Lynn Katherine, MD
Medical Oncology APP: No care team member to display
Radiation Oncologist: No care team member to display
Surgical Oncologist: No care team member to display
Appointment Type: Initial Nutrition Assessment and TeleHealth

Distant Site Telemedicine Encounter
I conducted this encounter via secure, live, face-to-face video conference with the patient. I reviewed the risks and benefits of telemedicine as pertinent to this visit and the patient agreed to proceed.

Provider Location: On-site location (clinic, hospital, on-site office)
Patient Location: At home
Present with patient: No one else present

Diagnosis: de novo metastatic breast cancer
Treatment Plans

Name	Type	Plan Dates	Plan Provider
Active			
OP Leuprolide Every 4 Weeks	Oncology Supportive Plan 1	8/17/2026 - Present	Lynn Katherine Symonds, MD
OP Zoledronic Acid for Bone Metastases and Multiple Myeloma Every 4 Weeks	Oncology Supportive Plan 2	8/24/2026 - Present	Lynn Katherine Symonds, MD
OP Ribociclib + Endocrine Therapy	Treatment Plan 1	8/13/2026 - Present	Lynn Katherine Symonds, MD

ASSESSMENT

Client History: Yvonne presents to her initial Nutrition visit, made at her request to discuss food recommendations for someone living with metastatic breast cancer.
Medical History
Surgical History
Food and Nutrition-Related History:
Diet preference: No specific preference
Food allergies/intolerances: shellfish intolerance
Knowledge/beliefs regarding food: n/a
Physical activity history: running, including marathons
Substance use: no EtOH since diagnosis

[image:important suggestion] **No data to display**

Food Insecurity: No Food Insecurity (7/27/2026)

Food Insecurity	
•	Worried About Running Out of Food in the Last Year: Never true
•	Ran Out of Food in the Last Year: Not on file

Medications: Reviewed

Dietary Supplements: Reviewed, pt reports taking vitamin D, iron, magnesium glycinate, zinc and omega 3

•	ondansetron (ZOFRAN)	8 mg, Every 8 hours
•	oxyCODONE	10 mg, Oral, Every 3 hours PRN
•	pantoprazole (PROTONIX)	40 mg, Oral, Daily empty stomach
•	polyethylene glycol 3350 (MIRALAX)	17 g, Daily
•	propranolol (INDERAL)	10 mg, Daily
•	ribociclib (600 mg dose) (KISQALI)	600 mg, Oral, Daily, Take on days 1 to 21 followed by 7 days off. Repeat every 28 days.
•	senna (SENOKOT)	17.2 mg, Oral, Nightly PRN
•	tretinoin 0.025 % cream	1 application, 3 times weekly

Intake: since diagnosis Yvonne has been working on increasing protein intake.
24 Hour Recall:
Breakfast: overnight oats with protein powder and fruit
Lunch: ground beef, rice, cauliflower, broccoli and Brussels sprouts
Snack: fruit, Fairlife protein shake (30 gm)
Dinner: salad (tomatoes, cucumber, butter lettuce), turkey meatball
Beverages: water, coffee, green tea

Nutrition Impact Symptoms: none; C1 of Ribociclib experienced low appetite, nausea and vomiting, these have not returned with C2

Physical Activity: daily 4-6 mile walk, weight lifting 4x/week

Anthropometrics:
Weight History: Weight: Patient reported usual body weight: 125 pounds and pt notes loss associated with poor intake at diagnosis and side effects from C1

Wt Readings from Last 4 Encounters:

09/11/26	54 kg (119 lb)
08/28/26	56.2 kg (124 lb)
08/28/26	55.8 kg (123 lb 0.3 oz)
08/14/26	56.7 kg (125 lb)

Ht Readings from Last 1 Encounters:

08/28/26	5' 3.75" (1.619 m)

BMI: Estimated body mass index is 20.59 kg/m² as calculated from the following:
Height as of 8/28/26: 5' 3.75" (1.619 m).
Weight as of 9/11/26: 54 kg (119 lb).
Nutrition Focused Physical Assessment: TH deferred

Labs/Procedures/Imaging: Lab results reviewed

DIAGNOSIS
Behavioral/Environmental:
-- Opportunity for nutrition education related to lack of prior education by RD on the topic of nutrition and breast cancer, as evidenced by patient with questions about the topic, Status: New

INTERVENTION

Nutrition Prescription:
Estimated Macronutrient Needs
Based on actual weight (54 kg)
1400-1500 kcal (MSJ 1156 x 1.2-1.3)
65-80 g protein (1.2-1.5 g/kg)
1900 ml fluid (35 ml/kg)

Recommended Diet: General

Nutrition Education and Counseling:
-- Nutrition Prescription Education: Reviewed AICR/ACS recommendations on diet and lifestyle for cancer prevention and survivorship, Reviewed lack of cancer-related evidence-based guidelines to support avoiding sugar/carbohydrates and avoiding soy/phytoestrogens

Person(s) Instructed: Patient
Desire and Motivation to Learn: Patient/caregiver demonstrated understanding of information provided, Engaging with education, asking questions, Reports ready to learn/make changes
Special Learning Needs: None
Teaching Methods Utilized: Explanation, Printed material
Handouts Provided: AICR Guidelines 9/23/26, Phytoestrogen-Containing Foods and Supplements 9/23/26

MONITORING AND EVALUATION

Nutrient Intake: % energy needs met, % protein needs met, % fluid needs met, adherence to AICR guidelines
Weight: Goals for weight: Maintenance
Nutrition Impact Symptoms: anorexia, emesis, nausea
Physical Activity: maintenance of current habits

Patient Acuity: Low nutrition acuity

MNT Service Group: Breast

Follow up: PRN, Provided RD contact information

To patients reading this note: Please be advised that the primary purpose of this note is for me to communicate with other members of your medical team. Standard sentence structure is not always used. Medical terminology, abbreviations and acronyms may be used that are unfamiliar to non-health care affiliated individuals. Measurements are used for calculation purposes only. "Ideal" weights are not intended to serve as recommendations for healthy weight goals.

Past Medical History:

VISIT INFORMATION:
Date of Service: 9/23/2026
Type of Visit: Return Visit
Referral Reason: Cancer-related pain, Symptom management (non-pain), and Emotional support/coping

ID/CC: 47 year old female with de novo metastatic breast cancer with osseous metastases. Diagnosed 07/2026. Admission 7/27/26 for pain. Currently on Lupron and anastrozole. Awaiting start of ribociclib. ACE visit 8/12/26 for increased pain. Kyphoplasty 9/16/26.

Use of Ambient Listening:
Was ambient listening technology used during this visit and was verbal consent for recording obtained? **Yes, used in visit. Consent was obtained.**
?

Treatment goal	[No plan goal]
Plan Name	OP Ribociclib + Endocrine Therapy
Start Date	8/15/2026
End Date	11/7/2026 (Planned)

Addressed during this visit: Patient's narrative, Symptom management, Optimizing quality of life, and Education about palliative care
Participants: Patient

History of Present Illness
Yvonne Kalley Franklin is a 47 year old woman with de novo metastatic breast cancer here today for follow up.

Over the last month, overall symptoms have improved with better energy. She is in week 2 of cycle 2 of ribociclib, better tolerated than cycle 1. She stopped anti-nausea medication 3 days ago without recurrent nausea. Tumor markers are down per recent discussion with Dr. Symonds.

One week status post vertebral cementing or kyphoplasty with expected post-procedure soreness at cemented sites, worst in the mid-back, steadily improving and now about 80% healed. Residual discomfort is mild soreness most noticeable with movement or engaging that area. A low back ache is also present; lumbar MRI is scheduled tomorrow to further consider radiation and possible new progression with new pain.

Analgesic regimen has been stable for the last couple of weeks with morphine ER 45 mg three times daily and oxycodone IR 10 mg three times daily, taken together around 7 am, 3 pm, and 10 pm. Pain is most noticeable in the evening before bed, particularly after light weightlifting. Overnight sleep is not interrupted by pain; she wakes only to urinate and returns to sleep without analgesics. Mornings are marked by generalized stiffness and aches rather than focal pain. The mid-day dose is sometimes taken without clear pre-dose pain escalation. She wants to cautiously reduce opioids.

Constipation is well controlled on senna plus polyethylene glycol after earlier constipation. She is no longer taking a muscle relaxant previously used for spasms. No hot flashes. No current vaginal pain or discomfort.

Goals of Care
I acknowledged recent improvements with kyphoplasty recovery, better tolerance of Kisqali, and downtrending tumor markers per her discussion with Dr. Symonds, while also naming the uncertainty early in treatment. She shared ongoing fear and worry about what comes next and noted that any new ache increases her anxiety, with MRI planned to assess for possible progression and consideration of additional radiation.

She emphasized priorities of regaining strength and function and staying present day to day. She described focusing on nutrition, increasing protein, and gradually returning to activity including light progressive weightlifting and cardiovascular exercise, with her husband providing close support and guidance for safe incremental progress. She stated a goal to reduce medications when possible without sacrificing comfort or function.

I discussed a stepwise approach to opioid de-escalation to avoid pain crisis and withdrawal symptoms. She stated she is not willing to tolerate pain that interferes with function and preferred a trial of using oxycodone immediate release only as needed while continuing morphine extended release for now, with close monitoring over the next week to guide further reductions. No discussion of code status, advance directives, or surrogate decision maker occurred.

Assessment & Plan
Cancer-related pain
Pain improved with increased activity; mild postoperative soreness at kyphoplasty sites, no need for nocturnal analgesics.
- Change oxycodone immediate release to 10 mg orally every 4 hours as needed; maintain morphine extended release at the current dose during a 1-week trial to quantify PRN needs.
- Take oxycodone as needed when pain increases, prior to pain becoming function-limiting.
- Reassess morphine extended release needs after the 1-week trial before making a dose reduction.
- Refill oxycodone immediate release prescription.
- Follow up with Glenn, palliative care pharmacist, in 1 week to review PRN opioid use and plan stepwise taper.
- Discuss stepwise opioid reductions as tolerated; next morphine extended release reduction to 30 mg, frequency to be determined based on PRN needs.
- Follow up with palliative care in 3-4 weeks.

Opioid-induced constipation
Constipation well-controlled on current bowel regimen.
- Refill senna.
- Continue senna and polyethylene glycol (Miralax) regimen.

Metastatic breast cancer to bone
Improved tolerance to ribociclib; tumor markers decreased; ongoing post-kyphoplasty recovery; new lumbar symptoms under evaluation.
- Proceed with lumbar spine MRI to assess for progression and guide possible radiation to lower back.
- Continue ribociclib and letrozole per oncology.
- Hold antiemetics as currently not needed.

Palliative care
Focus on symptom management, opioid tapering, functional optimization, and anticipatory guidance regarding hormone suppression-related symptoms and sexual health.
- Refer to Kelly Nelson (Sexual Health Clinic) for counseling and management of hormone suppression-related symptoms; schedule for future date.
- Ensure referral to Jennifer (social worker) is in place.
- Trial hyaluronic acid vaginal suppositories if vaginal dryness develops.
- Consider topical vaginal estrogen for significant symptoms; discuss with oncology if needed.

Pain

Pain Source: Cancer
Opioid Prescriber: Palliative
Long Acting Opioid (strength/dose/qty): Morphine ER 45 mg TID
Short Acting Opioid (strength/dose/qty): Oxycodone 10-15 mg every 3-4 hours PRN for pain. Currently using 10 mg TID
Adjuvant Meds: Tylenol 1000 mg TID
MED: 180
PMP Check (08/04/26): Yes
Opioid agreement:signed Yes

DISPOSITION:
Follow up visit in 2-3 weeks

FUNCTIONAL ASSESSMENT:
ECOG Performance Scale: (1) Restricted in physically strenuous activity, ambulatory and able to do work of light nature
Palliative Performance Scale:
Prognosis: Uncertain of prognosis

Subjective
PALLIATIVE CARE DISCUSSION:
Social History: Lives in Kirkland with husband Mark. 2 children ages 9 and 11. Corporate job. Working full time but planning to take the next month to treat pain and start treatment.
Understanding/Perspective of Illness: Metastatic disease. Treatment is palliative
Hopes, Strengths And What Brings Life Meaning Or Purpose: More time with 2 kids and family. Continuing to work and do the normal things.
Fears, Concerns, Worries: Worries about pain and controlling symptoms
Communication Preferences: Appreciates detail focused information. Uutilizes MyChart, telehealth as appropriate.
Role Of Spirituality, Faith, Religion, Spiritual Assessment:
Past Experience With Serious Illness/Hospice:
Acceptable Quality Of Life:

Advance Care Planning
FHCC ACP

Legal Next of Kin: Husband Mark

Paras, Leilani D, MD as PCP - General (Family Practice)
Purcell, William Thomas, MD as Oncologist (Hematology-Oncology)
Shepherd, Annemarie, MD (Radiation Oncology)
Kang, John, MD as Primary Contact (Radiation Oncology)
Symonds, Lynn Katherine, MD as Oncologist (Hematology-Oncology)
Brustkern, Amy K, PA-C as Physician Assistant (Palliative Medicine)

IMPORTANT CLINICAL HISTORY:
Imaging: 7/27/26 MRI C-T-L
IMPRESSION

1. No cord compression. Anterior epidural tumor extension at T5 and T8 levels
Diffuse osseous metastasis multiple cervical, thoracic and lumbar vertebral bodies. Pathologic fractures involving T4, T5 and T8 vertebral bodies with mild height loss at T5 (40%).

This is a preliminary report dictated by Abraham Mengstu M.D., neuroradiology fellow (PGY-6).

Unless an Attending Final Impression appears below, the report has not yet been finalized and an attending radiologist has not reviewed these images.
Pathology: 7/24/26 A) Right iliac crest, biopsy:
- Metastatic carcinoma.
Treatment History: Lupron + AI. Awaiting approval for Ribociclib.

Oncology History Overview Note

7/1/26: MRI T Spine
IMPRESSION:
Diffusely heterogeneous T1 hypointense and multifocal T2 hyperintense marrow signal including 2.3 x 2.3 cm expansile aneurysmal bone cyst like lesion in T5 vetebral body and similar lesions in T1, T8, T9, T10 and vertebral bodies, as well as 1.2 x 1.1 cm expansile T1 isointense, T2 hyperintense lesion in the posterior elements of T10. Additionally there is a 1.8cm ovoid T2 hyperintense mass in the visualized posterior right liver lobe. While multiple aneurysmal bone cysts is a small possibility, the appearance is highly concerning for metastases from unknown primary. Recommend CT chest, abdomena nd pelvis with contrast or PET/CT for further evaluation.
Compression deformities of T1, T4, T5 and T8 vertebral bodies which may be pathologic.
Mild bilateral neural foraminal narrowing at T8-9 secondary to bony expansion.

7/13/26: CT Chest
IMPRESSION
* Multiple osseous lytic lesions, as described, concerning for a neoplastic process.
* Fracture of the left 11th rib.
* A few scattered nodules, measuring up to 4 mm. In the context of a potential primary malignancy, a follow-up CT of the chest in 3 months is advised.

7/13/26: CT A/P
IMPRESSION
Diffuse lytic bone lesions throughout the spine and pelvis without CT evidence of primary malignancy in the abdomen or pelvis. Small bilateral ovarian cysts would be better characterized on transvaginal ultrasound.

7/22/26 PET/MR: Lt breast lesion 3.3x2.4cm SUVmax 1.9 with Rt axillary node 9x8mm SUVmax 2.0. Innumerable bony foci including compression fractures of T4, T8, L5.

7/15/26 Dx imaging: ***Left*** Status post breast reduction. Left breast 9 mm x 7 mm x 11 mm mass at 1 o'clock with ill-defined heterogeneous tissue seen more medially. There is no definite mammographic correlate. Assessment: 4 - Suspicious finding. Left breast 7 mm x 4 mm x 7 mm oval circumscribed mass at 2 o'clock. Assessment: 3 - Probably benign Left breast normal-appearing intramammary lymph node at 2 o'clock. Assessment: 2 - Benign finding. ***Right*** Status post breast reduction. Right breast 13 mm x 8 mm x 15 mm simple cyst at 5 o'clock. Assessment: 2 - Benign finding. At least three morphologically abnormal right axillary lymph nodes. Assessment: 4 - Suspicious finding.

7/21/26 PET/CT:
Mild to moderately FDG-avid lesion in the left lateral breast, concerning for a primary breast neoplasm. No left axillary lymphadenopathy or abnormal FDG uptake within the left axillary lymph nodes. Moderately FDG-avid right axillary lymph node, suspicious for metastatic involvement.
Innumerable markedly intense FDG-avid osseous lesions throughout the axial and appendicular skeleton, with associated compression fractures involving several vertebral bodies, consistent with widespread metastatic disease. * Given the markedly greater extent and intensity of skeletal FDG uptake relative to the left breast lesion, along with the absence of ipsilateral axillary nodal involvement, the pattern of metastatic disease is atypical for a breast primary, and an alternative primary malignancy should be considered.
* Mild to moderately avid left lateral breast lesion, possible neoplastic involvement. No left axillary lymphadenopathy or abnormal FDG uptake within the lymph nodes. * Moderately avid right axillary lymph node, concerning for metastatic.* Innumerable foci of intense FDG uptake involving axial and appendicular skeleton, with compression fractures of few vertebrae, likely metastatic. The intensity of the FDG uptake in the bone metastatic disease in comparison to the breast lesion and negative left lymph node involvement make it less likely to be originaria from the breast.
7/22/26 Left breast bx 1:00 7N: ILC G2 ER (91-100%) PR (91-100%) Her2 (1+) Ki67 21-30%
Right axillary LN: Metastatic carcinoma, Neoplastic cells are morphologically similar to the findings in part A, compatible with metastasis from breast primary

7/24/26 Right iliac crest bx: metastatic carcinoma

7/27/26 CT Full spine * Extensive lytic osseous metastases involving multilevel vertebral bodies and posterior elements. Redemonstrated age-indeterminant mild pathologic fractures (<25% height loss) in the C4, C6, T1, T4, T5, T8, and L5 levels. Findings are grossly similar to the prior PET/MR. * No definite new evidence of significant vertebral fracture or subluxation. * Of note, there are some extra-osseous extension involving left C4/5, left C6/7, and right T8/9 foraminal canals, and S1, S2/3 anterior epidural extension, resulting in spinal canal narrowing as described. Findings are similar to the 07/13/2026 abdominal CT. Consider MRI for evaluation of epidural/foraminal canal involvement if clinically warranted.* Of note, the left C4 and C6 lateral process involvement may involve the left V2 vertebral artery. Consider neck CTA to evaluate luminal patency if clinically warranted.

7/27/26 CT head/neck: Normal head CT. No acute infarct, hemorrhage or mass effect. Normal CTA head. No high-grade stenosis or occlusion. Normal CTA of the neck vessels. No stenosis, dissection or occlusion. Internal carotid artery origin stenosis by NASCET criteria: No significant stenosis by NASCET criteria
7/27/26 MRI Spine: No cord compression. Anterior epidural tumor extension at T5 and T8 levels

Diffuse osseous metastasis multiple cervical, thoracic and lumbar vertebral bodies. Pathologic fractures involving T4, T5 and T8 vertebral bodies with mild height loss at T5 (40%).

7/28/26 XR T spine: On the standing AP, lateral, and swimmer's views, skin metallic markers are noted at apparent levels of pain centered at the T1/2 level and the upper T7 level. The multiple lytic lesions throughout the thoracic spine are better visualized on the prior day CT but grossly stable again consistent with bony metastases without definite evidence of gross pathologic fracture. Again there is essential anatomic alignment on the lateral and frontal views. There are mild degenerative disc changes in the mid and lower thoracic spine.

7/28/26 Radiation Oncology consult inpt- plan to start radiation

7/29/26 Oncology consult inpt- start Lupron 7.5mg, anastrozole 1mg daily, zometa 4mg

7/29/26 Palliative radiation to C4-T11 800cGy in Fx

8/14/26 Start Ribociclib 600mg, 3 wks on, 1 wk off

Secondary malignant neoplasm of bone (HCC)

PHYSICAL EXAMINATION:
Not completed today as visit TH.

Distant Site Telemedicine Encounter
I conducted this encounter via secure, live, face-to-face video conference with the patient. I reviewed the risks and benefits of telemedicine as pertinent to this visit and the patient agreed to proceed.

Provider Location: On-site location (clinic, hospital, on-site office)
Patient Location: At home
Present with patient: No one else present

I spent a total of 43 minutes for the patient's care on the date of the service.

Current Outpatient Medications:
• acetaminophen 325 MG tablet, Take 3 tablets by mouth every 8 hours., Disp: , Rfl:
• albuterol HFA 108 (90 Base) MCG/ACT inhaler, Inhale 2 puffs by mouth every 4 hours as needed for shortness of breath/ wheezing., Disp: , Rfl:
• anastrozole 1 MG tablet, Take 1 tablet by mouth daily., Disp: 30 tablet, Rfl: 11
• cholecalciferol 50 mcg (2,000 unit) capsule, Take 2 capsules by mouth daily., Disp: , Rfl:
• lidocaine viscous 2 % mouth/throat solution, Take 5 mL by mouth 4 times a day as needed (for throat pain). To avoid numbing tongue, use straw/applicator to apply to back of throat). (Patient not taking: Reported on 8/28/2026), Disp: 200 mL, Rfl: 1
• morphine ER 15 MG ER tablet, Take 1 tablet by mouth every 8 hours. Take with a 30 mg tablet for a total of 45 mg every 8 hours, Disp: 90 tablet, Rfl: 0
• morphine ER 30 MG ER tablet, Take 1 tablet by mouth every 8 hours. Take with a 15 mg tablet for a total of 45 mg every 8 hours, Disp: 90 tablet, Rfl: 0
• naloxone 4 MG/0.1ML nasal spray, Use 1 spray in one nostril for suspected opioid overdose. Call 911. If unresponsive in 2 to 3 minutes, repeat with new naloxone nasal spray in opposite nostril., Disp: 2 each, Rfl: 0
• ondansetron 8 MG tablet, Take 1 tablet by mouth every 8 hours., Disp: , Rfl:
• oxyCODONE 10 MG tablet, Take 1-1.5 tablets by mouth every 3 hours as needed for moderate pain., Disp: 170 tablet, Rfl: 0
• pantoprazole 40 MG EC tablet, Take 1 tablet by mouth daily on an empty stomach. (Patient not taking: Reported on 8/28/2026), Disp: 20 tablet, Rfl: 0
• polyethylene glycol 3350 17 g packet, Take 1 packet by mouth daily. Dissolve in 4-8 ounce water., Disp: , Rfl:
• propranolol 10 MG tablet, Take 1 tablet by mouth daily., Disp: , Rfl:
• ribociclib (600 mg dose) 200 MG tablet therapy pack, Take 3 tablets by mouth daily. Take on days 1 to 21 followed by 7 days off. Repeat every 28 days., Disp: 63 tablet, Rfl: 2
• tretinoin 0.025 % cream, Apply 1 application topically 3 times a week. Apply to face., Disp: , Rfl:

The following attachments were made available to the patient upon discharge.
PHARMACY, SCOPOLAMINE PATCH (ENGLISH) (UWM IP CUSTOM INSTRUCTIONS)

Medications at Time of Discharge - documented as of this encounter

Medication	Sig	Dispense Quantity	Last Filled	Start Date	End Date
acetaminophen 325 MG tablet	Take 3 tablets by mouth every 8 hours.			07/30/2026	
albuterol HFA 108 (90 Base) MCG/ACT inhaler	Inhale 2 puffs by mouth every 4 hours as needed for shortness of breath/wheezing.				
anastrozole 1 MG tablet	Take 1 tablet by mouth daily.	30 tablet		08/21/2026	
cholecalciferol 50 mcg (2,000 unit) capsule	Take 2 capsules by mouth daily.				
citalopram 20 MG tablet	Take 1 tablet by mouth daily.			08/05/2026	
cyclobenzaprine 10 MG tablet	TAKE 1/2 TO 1 TABLET BY MOUTH THREE TIMES DAILY AS NEEDED FOR MUSCLE SPASMS			04/24/2026	
Lidocaine 10 % cream	Apply 1 g topically.			07/13/2026	
lidocaine viscous 2 % mouth/ throat solution	Take 5 mL by mouth 4 times a day as needed (for throat pain). To avoid numbing tongue, use straw/applicator to apply to back of throat).	200 mL		08/06/2026	
meloxicam 15 MG tablet				05/12/2026	
naloxone 4 MG/0.1ML nasal spray	Use 1 spray in one nostril for suspected opioid overdose. Call 911. If unresponsive in 2 to 3 minutes, repeat with new naloxone nasal spray in opposite nostril.	2 each		07/27/2026	07/27/2027
ondansetron 8 MG tablet	Take 1 tablet by mouth every 8 hours.				
pantoprazole 40 MG EC tablet	Take 1 tablet by mouth daily on an empty stomach.	20 tablet		08/06/2026	
polyethylene glycol 3350 17 g packet	Take 1 packet by mouth daily. Dissolve in 4-8 ounce water.				
prochlorperazine 10 MG tablet	Take 1 tablet by mouth every 6 hours as needed.			07/24/2026	
propranolol 10 MG tablet	Take 1 tablet by mouth daily.				
tretinoin 0.025 % cream	Apply 1 application topically 3 times a week. Apply to face.				
morphine ER 15 MG ER tablet	Take 1 tablet by mouth every 8 hours. Take with a 30 mg tablet for a total of 45 mg every 8 hours	90 tablet		09/08/2026	10/05/2026
morphine ER 30 MG ER tablet	Take 1 tablet by mouth every 8 hours. Take with a 15 mg tablet for a total of 45 mg every 8 hours	90 tablet		09/08/2026	10/05/2026
oxyCODONE 10 MG tablet	Take 1-1.5 tablets by mouth every 3 hours as needed for moderate pain.	170 tablet		08/10/2026	09/23/2026
prochlorperazine 10 MG tablet	Take 1 tablet by mouth every 6 hours as needed for nausea/ vomiting.	50 tablet		08/21/2026	09/25/2026
ribociclib (600 mg dose) 200 MG tablet therapy pack	Take 3 tablets by mouth daily. Take on days 1 to 21 followed by 7 days off. Repeat every 28 days.	63 tablet		09/12/2026	11/06/2026

Miscellaneous Notes - documented in this encounter

Procedure Nursing Note - Alex C - 09/16/2026 8:26 PM PDT

Formatting of this note might be different from the original.

PACU Summary, Outpatient Discharge:

Patient summary/synopsis
Level of consciousness: awake, alert, and oriented
Nausea:None
Dressing(s) are: clean, dry, and intact
Pain is present: No
Oral fluids taken: Yes
Voiding Status: Declined, denied need to void prior to discharge; educated to call if unable to void
Precautions or restrictions: Fall and Weight bearing restrictions

Home with: Written instructions.
Escort present:Yes

INTERVENTIONAL RADIOLOGY
BRIEF PROCEDURE NOTE
PROCEDURE: T8, S1 kyphoplasty and ablation

OPERATORS:
Attending: Som
Resident(s): Li
MS4: Zhou

FINDING: Uneventful procedure, full dictation to follow. Normal bilateral lower extremity neuologic exam post procedure.

POST-PROCEDURE DIAGNOSIS: Same

PROCEDURE IMAGES: Refer to PACS

COMPLICATION: None

ESTIMATED BLOOD LOSS: < 25 mL

SPECIMEN: None

PLAN / RECOMMENDATION:
- bedrest 1 hour
- IR to arrange follow up in clinic

ANTICOAGULATION PLAN: Hold therapeutic anticoagulation 24 hours post procedure, then okay to start/resume. Okay to start/resume prophylactic anticoagulation post procedure.

A full procedural report will be available under the **Imaging** *tab in* **Chart Review** *when finalized by the attending of record.*

Pre-Procedure H&P - Gabe Li - 09/16/2026 1:48 PM PDT
Formatting of this note might be different from the original.
NON-OR PREPROCEDURE H&P

Planned procedure: NIR ANGIO VERTEBROPLASTY [AVERPL]
Diagnosis and indications for procedure: Pathologic fracture

Non-OR Pre-Procedure H&P: I have recorded the Relevant History and Changes to History below AND I have reviewed any available pre-procedure screening/assessments on the EMR or written forms.

RELEVANT HISTORY OR CHANGE TO HISTORY:

Medical History
Surgical History
Social History

Medications:
I have reviewed any medications recorded on any pre-procedure assessment or the EMR.

Current Outpatient Medications

Medication	Instructions	
•	acetaminophen (TYLENOL)	975 mg, Every 8 hours scheduled
•	albuterol HFA 108 (90 Base) MCG/ACT inhaler	2 puffs, Every 4 hours PRN
•	anastrozole (ARIMIDEX)	1 mg, Oral, Daily
•	cholecalciferol (VITAMIN D-3)	4,000 units, Daily
•	lidocaine viscous 2 % mouth/ throat solution	5 mL, Oral, 4 times daily PRN
•	morphine ER (MS CONTIN)	30 mg, Oral, Every 8 hours scheduled, Take with a 15 mg tablet for a total of 45 mg every 8 hours
•	morphine ER (MS CONTIN)	15 mg, Oral, Every 8 hours scheduled, Take with a 30 mg tablet for a total of 45 mg every 8 hours

•	naloxone 4 MG/0.1ML nasal spray	Use 1 spray in one nostril for suspected opioid overdose. Call 911. If unresponsive in 2 to 3 minutes, repeat with new naloxone nasal spray in opposite nostril.
•	ondansetron (ZOFRAN)	8 mg, Every 8 hours
•	oxyCODONE	10-15 mg, Oral, Every 3 hours PRN
•	pantoprazole (PROTONIX)	40 mg, Oral, Daily empty stomach
•	polyethylene glycol 3350 (MIRALAX)	17 g, Daily
•	prochlorperazine (COMPAZINE)	10 mg, Oral, Every 6 hours PRN
•	propranolol (INDERAL)	10 mg, Daily
•	ribociclib (600 mg dose) (KISQALI)	600 mg, Oral, Daily, Take on days 1 to 21 followed by 7 days off. Repeat every 28 days.
•	tretinoin 0.025 % cream	1 application, 3 times weekly

Allergies:
I have reviewed any allergies recorded on any pre-procedure assessment or the EMR.
Review of patient's allergies indicates:

Allergies

Allergen	Reactions	
•	Propofol	Palpitations and Other
		PVC's *Palpitation*
•	Fentanyl	Other
		Isolated PVCs *8/20/2026 states took Fentanyl without incident.*

Reviewed Labs:
I have reviewed available labs.

Other results pertinent to this procedure include: None

Pre-procedure physical exam by MD
I have reviewed vital signs recorded on the EMR just prior to the procedure or recorded them below:
BP 117/67 (Patient Position: Lying) | Pulse 86 | Temp 36.5 °C (Temporal) | Resp 16 | SpO2 99%

Physical Exam

General appearance: in no acute distress

Cardiovascular: Rate: Regular

Respiratory: NWOB on RA

Abdominal: nondistended

Neurological/Neuromuscular: Normal

Other notable PE findings relevant to planned procedure: None

Assessment and Care Plan:
T8, T9, S1 ablation + biopsy + kyphoplasty with anesthesia support

Past Medical History:

Diagnosis	Date	
•	Breast cyst	Always

Past Surgical History:

Procedure	Laterality	Date
•	BREAST AUGMENTATION	
•	PR BREAST REDUCTION	2022
•	WISDOM TOOTH EXTRACTION	

Social History

Tobacco Use		
•	Smoking status:	Never
•	Smokeless tobacco:	Never
Substance and Sexual Activity		
•	Alcohol use:	Not Currently
•	Drug use:	Never
Social History Narrative		
	Resides with husband and two children (ages 9 and 11) in Kirkland, WA

Impressions

09/16/2026 6:10 PM PDT
T8 and S1 unipedicular kyphoplasty and ablation.
S1 biopsy

PLAN:Follow-up in clinic in one month.

Narrative

09/16/2026 6:10 PM PDT
This result has an attachment that is not available.

Narrative

PROCEDURE:
NIR ANGIO VERTEBROPLASTY, kyphoplasty and ablation of T8 and S1. Biopsy of S1

PRE-PROCEDURE DIAGNOSIS:
Metastatic breast cancer

POST-PROCEDURE DIAGNOSIS:
Same.

CONSENT:
The risks, benefits, and alternatives of the planned procedure were explained in detail to the patient. Questions were answered and written informed consent was obtained.

TIME OUT:
A time out and final verification was done by the entire team to verify patient, procedure, and site.

STERILE PREPARATION:
All elements of maximal sterile barrier technique were followed, including use of cap, mask, sterile gown, gloves, sterile sheet, chlorhexidine 2% isopropyl alcohol or povidone-iodine, and appropriate hand hygiene.

ANESTHESIA/SEDATION:
Anesthesia supervision: Dirrect monitoring by Interventional Radiology physician performing procedure, and administered by appropriately credentialed nurse.

Level of anesthesia achieved: Moderate sedation: Nurse or other qualified health professional providing continuous monitoring of sedation and vital signs throughout the procedure

DESCRIPTION OF PROCEDURE AND FINDINGS:
Procedure:
The patient was brought to the angiography suite and placed prone upon the examination table. The patient was prepped and draped in the usual sterile fashion. The T7 vertebral levels were identified and targeted using fluoroscopy. The soft tissues above the unilateral T8 and S1 pedicles were anesthetized using lidocaine via a 25G needle and subsequently a 22G spinal needle. With a unipedicular transpedicular approach, separate 11G needles were placed into the lateral aspect of the T8 and S1 vertebral bodies under fluoroscopic guidance with position confirmed under lateral and frontal projections. S1 was repeatedly assessed with repeat cone beam CTs. Biopsy of S1 was performed through the left transpedicular approach.

Subsequent evaluation demonstrated adjustable radiofrequency probe placed through the left T8 and S1 pedicle and curved medially and superiorly. Additionally, radiofrequency probes were placed through T8 and S1 pedicles and curved superomedially and inferomedially. Radiofrequency ablation was then performed to the appropriate and targeted the 50 degrees Celsius. Radiofrequency probes were then removed.

Methylmethacrylate was mixed and injected through both needles under direct fluoroscopic visualization. Subsequently, needles were removed. The patient tolerated the procedure well with no immediate complications.

T8 and S1 was done in sequence. T8 was done first, and then S1.

FINDINGS:
Initial evaluation delineated successful bilateral pedicular needle placement and subsequent fluoroscopic spot film demonstrated good needle tip positioning within the T8 and S1 vertebrae.
Subsequent evaluation then demonstrated ablation and augmentation as described above with final films demonstrating good vertebral fill and no significant extraosseous extension. There is a small amount of cement extravasation into the right S1 neural foramina that appears largely open on final cone beam CT. .

RADIATION DOSE:
Fluoroscopy time for this procedure was 25 minutes.

ESTIMATED BLOOD LOSS:
Minimal.

SPECIMENS OBTAINED:
None

COMPLICATIONS:
None.

Fentanyl	Other	Low	09/18/2019	Isolated PVCs 8/20/2026 states took Fentanyl without incident. 9/16/2026 took fentanyl without incident
Propofol	Palpitations, Other	Low	09/18/2019	PVC's Palpitation 9/16/2026 took propofol without incident

Medications - documented as of this encounter (statuses as of 11/18/2026)

Medication	Sig	Dispense Quantity	Last Filled	Start Date	End Date	Status
propranolol 10 MG tablet	Take 1 tablet by mouth daily.					Active
naloxone 4 MG/0.1ML nasal spray	Use 1 spray in one nostril for suspected opioid overdose. Call 911. If unresponsive in 2 to 3 minutes, repeat with new naloxone nasal spray in opposite nostril.	2 each		07/27/2026	07/27/2027	Active
albuterol HFA 108 (90 Base) MCG/ACT inhaler	Inhale 2 puffs by mouth every 4 hours as needed for shortness of breath/ wheezing.					Active
tretinoin 0.025 % cream	Apply 1 application topically 3 times a week. Apply to face.					Active
cholecalciferol 50 mcg (2,000 unit) capsule	Take 2 capsules by mouth daily.					Active
polyethylene glycol 3350 17 g packet	Take 1 packet by mouth daily. Dissolve in 4-8 ounce water.					Active
acetaminophen 325 MG tablet	Take 3 tablets by mouth every 8 hours.			07/30/2026		Active
lidocaine viscous 2 % mouth/ throat solution	Take 5 mL by mouth 4 times a day as needed (for throat pain). To avoid numbing tongue, use straw/applicator to apply to back of throat).	200 mL		08/06/2026		Active
pantoprazole 40 MG EC tablet	Take 1 tablet by mouth daily on an empty stomach.	20 tablet		08/06/2026		Active
anastrozole 1 MG tablet	Take 1 tablet by mouth daily.	30 tablet		08/21/2026		Active
ondansetron 8 MG tablet	Take 1 tablet by mouth every 8 hours.					Active
oxyCODONE 10 MG tablet	Take 1-1.5 tablets by mouth every 3 hours as needed for moderate pain.	170 tablet		08/10/2026	09/23/2026	Discontinued (Reorder)
prochlorperazine 10 MG tablet	Take 1 tablet by mouth every 6 hours as needed for nausea/vomiting.	50 tablet		08/21/2026	09/25/2026	Expired
ribociclib (600 mg dose) 200 MG tablet therapy pack	Take 3 tablets by mouth daily. Take on days 1 to 21 followed by 7 days off. Repeat every 28 days.	63 tablet		09/12/2026	11/06/2026	Discontinued (Side effects/ adverse reaction)
morphine ER 30 MG ER tablet	Take 1 tablet by mouth every 8 hours. Take with a 15 mg tablet for a total of 45 mg every 8 hours	90 tablet		09/08/2026	10/05/2026	Discontinued (Reorder)
morphine ER 15 MG ER tablet	Take 1 tablet by mouth every 8 hours. Take with a 30 mg tablet for a total of 45 mg every 8 hours	90 tablet		09/08/2026	10/05/2026	Discontinued (Reorder)

Active Problems - documented as of this encounter (statuses as of 11/18/2026)

Problem	Noted Date	Diagnosed Date
Acute bilateral thoracic back pain	07/28/2026

Anesthesia Postprocedure Evaluation - Deepak Sharma - 09/16/2026 6:37 PM PDT

Formatting of this note might be different from the original.

Patient: Yvonne Kalley Franklin

Procedure Summary:

Date: 9/16/2026	Room/Location: * No operating room entered * / UWMC INTERVENTIONAL RADIOLOGY
Anesthesia Start: 2:04 PM	Anesthesia Stop: 6:19 PM
* No procedures listed *	* No Diagnosis Codes entered *
Responsible Provider: Sharma, Deepak, MD	ASA Status: 3

Vitals	Value	Taken Time
BP	114/73	09/16/26 18:30
Temp	36.4 °C	09/16/26 18:07
Pulse	83	09/16/26 18:36
SpO2	99 %	09/16/26 18:36
Resp	16	09/16/26 18:30

Vitals shown include unfiled device data.

Place of evaluation: PACU

Patient participation: patient participated

Level of consciousness: sedated and responsive to voice

Patient pain control satisfaction: patient is satisfied with level of pain control

Airway patency: patent

Cardiovascular status during assessment: stable

Respiratory status during assessment: breathing comfortably

Anesthetic complications: no

Intravascular volume status assessment: euvolemic

Nausea / vomiting: patient is not experiencing nausea

Planned post-operative disposition at time of assessment: ward care

Anesthesia Procedure Notes - Diane Elizabeth Sy - 09/16/2026 3:23 PM PDT

Associated Order(s): Airway Placement
Formatting of this note might be different from the original.
Airway Placement

Staff:
Performing Provider: Sy, Diane Elizabeth, CRNA
Authorizing Provider: Banyas, Michael R, MD

Airway management:
Patient location: OR/Procedural area
Final airway type: Endotracheal airway
Intubation reason: General anesthesia/planned procedure

Induction:
Positioning: supine
Preoxygenation: Yes
Mask Ventilation:Grade 1 - Ventilated by mask

Intubation:

Number of Attempts: 1

Final Attempt
Airway Type: ETT
Primary Laryngoscopy: GlideScope
Glidescope Blade Geometry: LoPro (hyperangulated)
Blade Size: 3
Laryngoscopic View: Grade I
ETT Type: standard, cuffed
ETT Route:oral
Size: 7
ETT secured with adhesive tape and ETT holder
Depth at:teeth (21cm)
Bite Block: handmade cotton & tape - unilateral

Assessment:
Confirmation: waveform capnography, auscultation and direct visualization
Difficult Airway: no
Procedure Abandoned: no

Date / Time Airway Secured / Re-Secured:
9/16/2026 2:13 PM

Final procedure comments:
Elective use of Glidescope Lo Pro 3 d/t hx of C spine stenosis and limited mobility. Pt pre-oxygenated for > 2 mins, verified that neck is in comfortable position prior to starting induction. Smooth, standard induction, easy mask. With Cspine in neutral position, glidescope introduced. Easy, grade 1 view, oropharyngeal structures undamaged and unchanged from pre-op. Soft gauze roll bite block in place.

Narrative & Impression

NORMAL SINUS RHYTHM
POSSIBLE LEFT ATRIAL ENLARGEMENT
LOW VOLTAGE QRS IN PRECORDIAL LEADS
NONSPECIFIC T WAVE ABNORMALITY
PROLONGED QT
ABNORMAL ECG
WHEN COMPARED WITH ECG OF 28-Aug-2026 14:28,
NO SIGNIFICANT CHANGE WAS FOUND
Echo 12/9/19
INTERPRETATION SUMMARY
Normal left ventricle chamber size and function with an EF of 55-60%
Normal right ventricle chamber size and function.
Normal left and right atria.
No hemodynamically significant valvular abnormalities seen.
Normal estimated RVSP of <20mmHg.
Normal IVC size with normal respiratory collapse.
Intertrial septal aneurysm is noted with no doppler evidence of a shunt.

Perioperative Risk Scores:

• **DUKE**
Total Score: 18 | V02Peak: 17.34 | METS: 4.95

Obstructive Sleep Apnea (OSA): Low Risk Total Score: 2

Miscellaneous Notes - documented in this encounter

Procedure Nursing Note - Savannah S - 09/14/2026 10:02 AM PDT

Formatting of this note might be different from the original.

Radiology Pre-Procedure Telephone Note

Planned Procedure: Vertebroplasty
Date & Time Scheduled: Wed 9/16 @ 1230
Arrival Time: 1030 at OP lab

BMI: Estimated body mass index is 20.59 kg/m² as calculated from the following:
Height as of 8/28/26: 5' 3.75" (1.619 m).
Weight as of 9/11/26: 54 kg (119 lb).
Allergies Reviewed: Yes

Allergy to Contrast/Iodine? No

Prep Call
Spoke with (patient or other): patient

The following was discussed with patient or representative: all

Respiratory
Hx OSA? No
Uses CPAP? No

Medication Information
Relevant Home Meds: none
(Medications need to be verified day of procedure)

Pt instructed to HOLD (meds): none
Pt instructed to TAKE (meds): all as prescribed

Anticoagulation meds: none

Pregnancy Test:
Indicated: **Yes - pre menopausal**
Test ordered: **No - will sign waiver**

Diabetic? No
Diabetic Medication Instructions: n/a

GLP1 Agonists? No
GLP1 Agonist Medication Instructions: n/a

Sedation Plan:

Anesthesia

Expected length of bedrest post procedure: 2 hr
Post Procedure Disposition: PACU

The patient was also instructed on the following:
Please do not eat anything for at least 8 hours prior to your scheduled procedure time. You can still have CLEAR liquids, but must also then refrain from these liquids for 2 hours prior to your scheduled procedure time. Bring CPAP machine if applicable.

Please arrive to the Front Desk Registration Desk 1.5 hrs prior to your procedure. You will then be instructed on where to wait until your pre-procedure nurse is ready.

Post Procedure Escort Name/Relation: husband

Patient and/or representative verbalize understanding of all instructions and agree with the plan?
Yes

Electronically signed by Savannah S at 09/14/2026 10:23 AM PDT

FRED HUTCHINSON CANCER CENTER
Genetic Counseling Clinic Note
Date of Visit: 9/14/2026

PATIENT IDENTIFICATION
Legal Name: Yvonne Kalley Franklin
Name in use: Yvonne
DOB: 6/17/1979
MRN: U4772842

Pronouns: she/her/hers

REASON FOR VISIT
Yvonne Kalley Franklin was referred for a genetic evaluation regarding her recent diagnosis of breast cancer.

Referred by: Lynn Symonds, MD
825 Eastlake Avenue East
Seattle, WA 98109-4405

Distant Site Telemedicine Encounter
I conducted this encounter via secure, live, face-to-face video conference with the patient. I reviewed the risks and benefits of telemedicine as pertinent to this visit and the patient agreed to proceed.

Provider Location: Off-site location (home, non-UW location)
Patient Location: At home
Present with patient: No one else present

I spent a total of 35 minutes of face-to-face time with Yvonne.

MEDICAL AND FAMILY HISTORY
Refer to the below pedigree obtained at this clinic visit based on information provided by Yvonne.

[image]

Yvonne is a 47 year old female. Yvonne Kalley Franklin was recently diagnosed with de novo metastatic ER+/PR+, HER2-negative ILC of left breast with predominantly osseous metastatic disease. Received palliative radiation and been on Ribociclib.

Cancer screenings and significant history detailed below:

COLON: C-scope in 2021 with 1 tubular adenoma. C-scope in 2023.

GYN: Retains ovaries and uterus.
Age of Menarche:16
Menopausal Status:perimenopausal
G2P2
Age of First Birth:35
HRT Last Use:N/A

SKIN: No prior concerns.

She has no prior germline cancer-related genetic testing.

The family history is listed below:

Children: 1 son, 1 daughter (ages 9 and 11)

Siblings: 1 maternal half-brother

Maternal Family: Grandmother had colon cancer and passed at 52.

Paternal Family: No information and no contact.

Ethnicity: Maternal ancestry is Central/Eastern European; paternal ancestry is Central/Eastern European. Yvonne reports no Ashkenazi Jewish ancestry.

GENETIC COUNSELING
Cancer occurs due to a combination of environmental and genetic factors. Most cancers are sporadic, or occur at random, without a strong hereditary component. About 5-10% of cancers are thought to be caused by cancer predisposition syndromes, which are associated with a mutation in a single gene that increases a person's risk for certain cancers. When a hereditary cancer predisposition syndrome is present in a family, there is a list of common patterns that can be seen. These patterns include: multiple family members and/or multiple generations affected with cancer, cancers diagnosed at younger ages than expected, individuals with multiple primary cancers, or rare types of cancer pathologies.

Yvonne's recent diagnosis of early-onset breast cancer raises suspicion for a genetic cancer susceptibility. The most common genes associated with hereditary breast cancer are BRCA1 and BRCA2. Mutations in these genes have been shown to increase the lifetime risk for breast and ovarian cancer, increase risk for male breast cancer, prostate cancer, and in some families increase the incidence of pancreatic cancer and melanoma. Other possible hereditary risks for breast cancer include mutations in genes such as ATM, CDH1, CHEK2, PALB2, PTEN, and TP53.

Yvonne meets NCCN criteria for cancer-related genetic testing.

We discussed the implications of genetic testing for Yvonne and her family members. Identifying a pathogenic variant can broaden treatment options, guide screening and management, and identify cancer risks not indicated by family history. We discussed various options for pursuing genetic testing, along with potential results (i.e., positive, negative and a variant of uncertain significance) and inheritance pattern.

Yvonne decided to proceed with cancer-related genetic testing. She was motivated by a desire to inform possible treatments and hereditary cancer risks for self and children.

PLAN
1. Verbal informed consent was obtained, and the patient will have blood drawn on 9/25/26 at the FHCC Alliance Lab. This will be sent to Invitae for testing.
2. Invitae will facilitate billing with Yvonne's insurance.
3. The results will be disclosed by phone in 2-3 weeks.
4. Further plans for cancer screening and risk reduction can be made pending the outcome of this testing.

I gave Yvonne my contact information for any additional questions or concerns.

Medications

Current Outpatient Medications

Medication	Instructions	
•	acetaminophen (TYLENOL)	975 mg, Every 8 hours scheduled
•	albuterol HFA 108 (90 Base) MCG/ACT inhaler	2 puffs, Every 4 hours PRN
•	anastrozole (ARIMIDEX)	1 mg, Oral, Daily
•	cholecalciferol (VITAMIN D-3)	4,000 units, Daily
•	lidocaine viscous 2 % mouth/ throat solution	5 mL, Oral, 4 times daily PRN
•	morphine ER (MS CONTIN)	30 mg, Oral, Every 8 hours scheduled, Take with a 15 mg tablet for a total of 45 mg every 8 hours
•	morphine ER (MS CONTIN)	15 mg, Oral, Every 8 hours scheduled, Take with a 30 mg tablet for a total of 45 mg every 8 hours
•	naloxone 4 MG/0.1ML nasal spray	Use 1 spray in one nostril for suspected opioid overdose. Call 911. If unresponsive in 2 to 3 minutes, repeat with new naloxone nasal spray in opposite nostril.
•	oxyCODONE	10-15 mg, Oral, Every 3 hours PRN
•	pantoprazole (PROTONIX)	40 mg, Oral, Daily empty stomach
•	polyethylene glycol 3350 (MIRALAX)	17 g, Daily
•	prochlorperazine (COMPAZINE)	10 mg, Oral, Every 6 hours PRN
•	propranolol (INDERAL)	10 mg, Daily
•	[START ON 9/12/2026] ribociclib (600 mg dose) (KISQALI)	600 mg, Oral, Daily, Take on days 1 to 21 followed by 7 days off. Repeat every 28 days.
•	tretinoin 0.025 % cream	1 application, 3 times weekly

Medication History
Pt reports changes to their medication on med list: No

Possible drug interactions:
Rx Interactions
Clinically relevant drug interactions identified?: No

Adherence Assessment:
Rx-Adherence
Was adherence assessed during this encounter?: Yes
Patient reported X missed doses in the last month: 0
Patient reported taking incorrect dose in the last month: No
Concerns for Adherence?: No

Symptom/Toxicities Assessment:
Patient reports the following side effects:
Side effects to report?: Yes

General: Fatigue: Grade 1;

Gastrointestinal: Nausea: Grade 1 (Going to take Zofran 30 min before Kisqali dose. Taking Kisqali w/ meals - seen inprovement in nausea since doing this);

Interventions and Follow-up Plan:

Plan: 9/11 labs reviewed - ok to continue ribociclib, pt will start new cycle tomorrow. Will try to take Zofran 30 min before Kisqali doses to alleviate some nausea, she'll try to peel of nausea meds and use on more prn basis if she thinks nausea is well controlled. Has compazine on hand as well. Will f/u with labs in 2 weeks.

A prescription for ribociclib will NOT be sent to CVS Specialty pharmacy. Future refills will be managed by the FHCC Oral Chemotherapy Service.

Follow-up Dates:
Date of next outreach:: 09/25/26

Date of next pharmacist lab review:: 09/25/26
Next refill due: 11/20/26
Reference: MONALEESA-2

FRED HUTCHINSON CANCER CENTER
BREAST ONCOLOGY RETURN VISIT

ID/CC: Patient is a 47 yo premenopausal woman presenting with de novo metastatic breast cancer (ER+/PR+/HER2-) currently on OS+AI+ribociclib here for follow-up

ONCOLOGY HISTORY:
-February 2026: Developed back pain which got progressively worse
-7/1/26: MRI spine showed expansile lesions in T1, T5, T8-T10 with expansile element in T10
-7/13/26: CT chest/abdomen/pelvis showed diffuse bony lesions throughout spine and pelvis and left 11th rib fracture as well as a few scattered lung nodules.
-7/21/26: PET-CT w FDG lesions in L breast, R axilla, FDG avid osseous lesions, compression fracture.
-7/22/26: L breast core biopsy showed invasive lobular carcinoma, ER+ (91-100%), PR+ (91-100%), HER2- (1+ by IHC), Ki-67 21-30% , Right axilla LN biopsy showed metastatic carcinoma
-7/24/26: Right iliac crest biopsy showed metastatic carcinoma
-7/27/26-7/30/26: Admitted for pain control, she received palliative radiation with 800 cGy over 1 fraction to the right hip joint, started on lupron and anastrozole, also received zometa as an inpatient
-8/15/26: Start Ribociclib

Interval History:
-Her pain is significantly better, she has been able to use less pain medication
-Walking 4-6 miles a day now and doing light weight lifting
-Her body did adjust to the medication, but beginning was a rough start
-She is experiencing nausea, but feels much better during the off the week
-Fatigue is present
-Still losing weight

ROS: Complete ROS was reviewed and was negative unless stated above in the HPI

ECOG: 0 (prior to diagnosis)

PMH

Patient Active Problem List

Diagnosis	
•	Secondary malignant neoplasm of bone (HCC)
•	Neck pain
•	Cancer related pain
•	Breast cancer metastasized to bone, unspecified laterality (HCC)
•	Acute bilateral thoracic back pain
•	Pathologic compression fracture of vertebra (HCC)
•	Metastatic malignant neoplasm (HCC)
•	Cancer, metastatic to bone (HCC)

Gynecology History:
Menopausal Status: premenopausal
HRT use: Denies
OCP use: Yes, from 18-33 then had IUDs (IUD recently removed)

PSH

Past Surgical History

Procedure	Laterality	Date
•	BREAST AUGMENTATION	
•	PR BREAST REDUCTION	2022
•	WISDOM TOOTH EXTRACTION	

MEDICATIONS

Medication	Sig	Dispense	Refill

•	acetaminophen 325 MG tablet	Take 3 tablets by mouth every 8 hours.		
•	albuterol HFA 108 (90 Base) MCG/ACT inhaler	Inhale 2 puffs by mouth every 4 hours as needed for shortness of breath/wheezing.		
•	anastrozole 1 MG tablet	Take 1 tablet by mouth daily.	30 tablet	11
•	cholecalciferol 50 mcg (2,000 unit) capsule	Take 2 capsules by mouth daily.		
•	lidocaine viscous 2 % mouth/throat solution	Take 5 mL by mouth 4 times a day as needed (for throat pain). To avoid numbing tongue, use straw/applicator to apply to back of throat). (Patient not taking: Reported on 8/28/2026)	200 mL	1
•	morphine ER 15 MG ER tablet	Take 1 tablet by mouth every 8 hours. Take with a 30 mg tablet for a total of 45 mg every 8 hours	90 tablet	0
•	morphine ER 30 MG ER tablet	Take 1 tablet by mouth every 8 hours. Take with a 15 mg tablet for a total of 45 mg every 8 hours	90 tablet	0
•	naloxone 4 MG/0.1ML nasal spray	Use 1 spray in one nostril for suspected opioid overdose. Call 911. If unresponsive in 2 to 3 minutes, repeat with new naloxone nasal spray in opposite nostril.	2 each	0
•	oxyCODONE 10 MG tablet	Take 1-1.5 tablets by mouth every 3 hours as needed for moderate pain.	170 tablet	0
•	pantoprazole 40 MG EC tablet	Take 1 tablet by mouth daily on an empty stomach. (Patient not taking: Reported on 8/28/2026)	20 tablet	0
•	polyethylene glycol 3350 17 g packet	Take 1 packet by mouth daily. Dissolve in 4-8 ounce water.		
•	prochlorperazine 10 MG tablet	Take 1 tablet by mouth every 6 hours as needed for nausea/ vomiting.	50 tablet	0
•	propranolol 10 MG tablet	Take 1 tablet by mouth daily.		
•	[START ON 9/12/2026] ribociclib (600 mg dose) 200 MG tablet therapy pack	Take 3 tablets by mouth daily. Take on days 1 to 21 followed by 7 days off. Repeat every 28 days.	63 tablet	2
•	tretinoin 0.025 % cream	Apply 1 application topically 3 times a week. Apply to face.		

No facility-administered medications prior to visit.

ALLERGIES

Review of patient's allergies indicates:

Allergies

Allergen	Reactions	
•	Propofol	Palpitations and Other
		PVC's *Palpitation*
•	Fentanyl	Other
		Isolated PVCs

SOCIAL HISTORY: Accompanied today by her husband. She has two children ages 9 and 11.
EtOH:She drinks 1-2 drinks alcohol on a few to most nights of the week.
Tobacco: Never smoker
Recreational Drugs: Denies

FAMILY HISTORY

Problem	Relation	Age of Onset
•	Colon Cancer	Maternal Grandmother
•	Breast Cancer	No Hx Of
•	Ovarian Cancer	No Hx Of

PHYSICAL EXAM

Vitals:

IMAGING
No new results

ASSESSMENT/PLAN: Patient is a 47 yo premenopausal woman presenting with de novo metastatic breast cancer (ER+/PR+/HER2-) currently on OS+AI+ribociclib here for follow-up

#Breast Cancer: Patient presented with several months of back pain. An MRI on 7/1/26 showed expansile lesions in T1, T5, T8-T10. Subsequent CT chest/abdomen/pelvis on 7/13/26 showed diffuse bony lesions throughout spine and pelvis and left 11th rib fracture as well as a few scattered lung nodules. PET CT on 7/21/26 showed FDG avid lesions in L breast, R axilla, and bones. Left breast core biopsy on 7/22/26 showed invasive lobular carcinoma, ER+ (91-100%), PR+ (91-100%), HER2- (1+ by IHC), Ki-67 21-30%. Right axillaary LN biopsy showed metastatic carcinoma. Right iliac crest biopsy also showed metastatic carcinoma. She subsequently admitted for pain control and started on lupron+anastrozole. She has now started ribociclib and pain is slowly improving. Overall tolerating well with nausea and fatigue. We will plan to continue at current dose. CEA is declining today which paired with improvement in her pain is reassuring that she is clinically responding. She is scheduled with IR for kyphoplasty as below.
-Continue lupron q4 weeks
-Continue anastrozole daily
-Continue ribociclib (no changes to dose today)
-Repeat PET CT due November 2026
-Scheduled to meet with nutrition
-Will send next generation sequencing on tumor sample (pending)

#pain management: s/p palliative RT to right hip joint. Following with palliative care for pain management. She is following with IR/rad-onc and team is planning for S1 unipedicular kyphoplasty, biopsy, and ablation with general anesthesia and team may consider T8 kyphoplasty if still having pain in that area.

#Bone Mets:
-Continue zometa q4 weeks
-Continue calcium and vitamin D

#Genetics: Genetic testing recommended in the setting of metastatic breast cancer

Return: 1 month

Electronically signed by Lynn Symonds at 09/11/2026 10:39 AM PDT

FRED HUTCH PALLIATIVE CARE NURSE NOTE

VISIT INFORMATION:
Date of Service: 9/8/2026

ID/CC: Refill Request

Participants: Patient

Problem: Controlled Request
Impression: RN call to check on pain/ complete RX refill. Yvonne feels like her back "is a mystery." Lower back pain has stabilized and not that bad anymore. Says it's been a big swing with how pain feels. Overall has been a huge improvement. Lower back still feels "tight" d/t fracture & will have kyphoplasty completed, but no longer feels sharp. Met with IR last Friday for evaluation/ kyphoplasty planning. Pain at R rib has been there on & off, but has been more painful this week. PRN oxycodone helps, but says rib pain "is what it is" and feels manageable. She feels the best she has felt since being diagnosed this week. PRN oxycodone use has decreased to TID dosing (takes 10-15mg per dose depending on pain level). She is not waking up to take oxycodone overnight anymore

Abbreviated Pain Assessment:
1. Are there any changes to pain since you were last seen? Other: yes, see above
2. Are you satisfied with your current pain regimen? Yes
3. How are you taking the pain medication (morphineER)? 45mg q8hrs
4. Have you noticed any new side effects? None

Pain Source: Cancer
Opioid Prescriber: Palliative care
Long Acting Opioid (strength/dose/qty): morphineER 45mg q8hrs
Short Acting Opioid (strength/dose/qty): oxycodone 15mg q4hrs PRN
Adjuvant Meds: tylenol
Total MEDD: 180 - 202.5mg
Pill Counts: morphineER: # 4 - 5 tabs
morphineER: # 4-5 tabs
Date of last appointment: 8/26/2026
Date of next appointment: 9/23/2026

3 Months: **WA PMP Medication Dispense History (from 6/9/2026 to 9/7/2026)**

	Dispensed	Sold	Days Supply	Quantity
MORPHINE SULF ER 15 MG TABLET	8/23/2026	No sold data	14	42 unspecified
MORPHINE SULF ER 30 MG TABLET	8/23/2026	No sold data	14	42 unspecified
OXYCODONE HCL (IR) 10 MG TAB	8/12/2026	No sold data	14	170 unspecified
MORPHINE SULF ER 15 MG TABLET	8/11/2026	No sold data	14	42 unspecified
MORPHINE SULF ER 30 MG TABLET	8/11/2026	No sold data	14	42 unspecified
MORPHINE SULF ER 30 MG TABLET	7/30/2026	No sold data	14	28 unspecified
OXYCODONE HCL (IR) 10 MG TAB	7/30/2026	No sold data	14	170 unspecified
OXYCODONE HCL (IR) 5 MG TABLET	7/17/2026	No sold data	8	100 unspecified
ACETAMINOPHEN-COD #3 TABLET	7/14/2026	No sold data	5	20 unspecified
ALPRAZOLAM 0.25 MG TABLET	7/10/2026	No sold data	30	30 unspecified

EVALUATION AND PLAN:

Nursing Interventions:
Confirmed patient's preferred pharmacy
Refill request sent to provider

Plan:
Amy Brustkern, PA-C to send refill

Patient/Caregiver Response:
Aware of existing appointments, Aware of clinic contact information, and States understanding of plan

Electronically signed by Molly T at 09/08/2026 10:39 AM PDT

INTERVENTIONAL RADIOLOGY OUTPATIENT CONSULT NOTE

REFERRING PHYSICIAN
Amin Gautam, MD

IDENTIFICATION AND CHIEF COMPLAINT
Yvonne K Franklin is a 47 year old female patient who is referred to interventional radiology for consideration of treatment options for vertebral augmentation.

INTERVAL HISTORY
Her husband had a series of questions and had brought up conservative management of T8. She would like to plan for S1 for sure and the pain at T8 has improved somewhat but still difficulty in breathing and some discomfort with motion.

HISTORY OF PRESENT ILLNESS -

Pt was recently admitted for pain control of significant metastatic disease. MRI demonstrates spinal metastases with several levels of compression fractures of varying acuity. No surgical intervention was indicated per NSGY, and patient was discharged following adequate pain control. She has received outpatient radiation therapy three weeks ago. Since 3 weeks ago, her pain is significantly better in her neck.Last week she reported significant pain with motion in the upper spine can get to an 8 or 9. She can't bend, turn, and she is limiting her motion, as well as limiting breathing. However messages sent from her husband on her account noted significant improvement and the desire to be conservative at T8. Discussion on conference call today noted T8 bothers her but is getting better. She still has significant pain in the hip with bending and motion 9-10 though not a direct correlate with prior imaging.

PAST MEDICAL HISTORY

Active Ambulatory Problems

	Diagnosis	Date Noted
•	Secondary malignant neoplasm of bone (HCC)	07/22/2026
•	Neck pain	07/27/2026
•	Cancer related pain	07/27/2026
•	Breast cancer metastasized to bone, unspecified laterality (HCC)	07/27/2026
•	Acute bilateral thoracic back pain	07/28/2026
•	Pathologic compression fracture of vertebra (HCC)	07/28/2026
•	Metastatic malignant neoplasm (HCC)	07/28/2026
•	Cancer, metastatic to bone (HCC)	07/28/2026

Resolved Ambulatory Problems

	Diagnosis	Date Noted
•	No Resolved Ambulatory Problems	

Past Medical History:

IMAGING STUDIES
[image][image]

CT T-L spine today 8-28-26
T8 has progressed in fracture, T9 slightly worse along the inferior endplate.

[image]

[image]

[image]
S1 has fractured in the interval

[image]
L5- approximately the same, maybe slightly worse.

ASSESSMENT AND PLAN
Yvonne K Franklin is a 47 year old female with recently diagnosed metastatic breast cancer and extensive spinal metastases. Since receiving radiation therapy, she has improved in regards to her pain however has significant motion related pain at S1 and some continued discomfort at T8 with shortness of breath and pain.

- Plan S1 unipedicular kyphoplasty, biopsy, and ablation with general anesthesia. If still having pain at T8 can consider T8 kyphoplasty.
- Referral to Dr. Kang for possible radiation to sacrum/coccyx given symptoms
- She would be ok with participating in the research biobank (formal consent to be done)
- Hold AC as per guidelines.

Avik Som, MD, PhD
UW Interventional Radiology

I spent 30 minutes on exam and care with the patient.

Distant Site Telemedicine Encounter
I conducted this encounter via secure, live, audio only conference with the patient. I reviewed the risks and benefits of telemedicine as pertinent to this visit and the patient agreed to proceed.

Provider Location: On-site location (clinic, hospital, on-site office)
Patient Location: At home
Present with patient: No one else present

Electronically signed by Avik Som at 09/04/2026 4:43 PM PDT

Plan of Treatment - documented as of this encounter

Telephone Encounter - Megan D - 09/03/2026 12:13 PM PDT

Formatting of this note might be different from the original.

Fred Hutch Cancer Center RN Telephone Note

ATTENDING: Purcell, William Thomas, MD
Symonds, Lynn Katherine, MD

DIAGNOSIS AND IDENTIFICATION:
47-year-old premenopausal woman with de novo metastatic ER+/PR+, HER2-negative breast cancer with predominantly osseous metastatic disease

CURRENT THERAPY:
Lupron, Anastrozole, Ribociclib, Zometa

Last treatment date:
Ribociclib: will finish current cycle tomorrow
Lupron: 8/28
Zometa: 8/28

SITUATION/BACKGROUND:
Call to discuss symptoms reported in MCM

ASSESSMENT:
Patient Reports:
• Lower back pain
• She's able to walk, but often as she takes a step, she gets sharp pain in her lower back. Notices this with both legs, but maybe slightly more on the right.
• Painful area is roughly 5 inches above tailbone in the middle, about where top of mid-rise jeans would fit.
• Also notices when sitting or lying down
• Difficult to get up from laying down due to pain.
• Pain with walking up the stairs, more so when stepping with R foot.
• Pain meds are not really changing the pain level
• She denies other areas of increased pain, changes to bowel or bladder, and numbness/tingling in her legs.

Yvonne is otherwise feeling well and notes pain improvement elsewhere, specifically in her upper back. Radiation was very successful in her upper back and she's open to discussion about her lower back.

Yvonne has 1 more day of Ribo and then will start the off week. We discussed refill process and timing to call specialty pharmacy. RN to follow up with pharmacists regarding next script, which is ordered as "future" for 9/12.

Patient Denies:
- changes in balance, constipation, dehydration, diarrhea, muscle or joint pain, numbness or tingling, and urination changes. Denies new pain in other parts of her body.

Home Care Tried (if any):
Yvonne had previously decreased Oxy dose due to feeling better overall, but has increased again for back pain management, though she does not feel that it's effective.

PLAN & RECOMMENDATIONS:
Relayed that Dr. Symonds reached out to Dr. Kang about potential radiation to this area. Yvonne is open to this. RN will send note details to Drs Symonds and Kang as well.
RN follow up with pharmacists about Ribo prescription.

Return/ED Precautions:
Call back if: fever (100.4 F or above), new or worsening symptoms, shortness of breath, dizziness, and any other questions or concerns

Reviewed Spinal Cord Compression symptoms with Yvonne and she understands to go directly to ER if she develops any of these symptoms

Action Taken: Provider Notified

Patient Response: Aware of existing appointments, Aware of clinic contact information, States understanding of plan, and No further questions

Electronically signed by Megan D at 09/03/2026 1:14 PM PDT

ADDENDUM:

ADDENDUM:

I have personally reviewed the images and agree with the report (or as edited).

Impressions

08/28/2026 1:36 PM PDT

Normal alignment

Redemonstrating multifocal lytic osseous metastasis throughout the thoracic spine and pathological fracture involving T1, T4, T5, and T8 with approximately 60-70% height loss. Better evaluated in CT spine of the same day.

Mild degenerative changes without significant neural foraminal narrowing or spinal stenosis.

Medications - documented as of this encounter (statuses as of 11/18/2026)

Medication	Sig	Dispense Quantity	Last Filled	Start Date	End Date	Status
propranolol 10 MG tablet	Take 1 tablet by mouth daily.					Active
naloxone 4 MG/0.1ML nasal spray	Use 1 spray in one nostril for suspected opioid overdose. Call 911. If unresponsive in 2 to 3 minutes, repeat with new naloxone nasal spray in opposite nostril.	2 each		07/27/2026	07/27/2027	Active
albuterol HFA 108 (90 Base) MCG/ACT inhaler	Inhale 2 puffs by mouth every 4 hours as needed for shortness of breath/ wheezing.					Active
tretinoin 0.025 % cream	Apply 1 application topically 3 times a week. Apply to face.					Active
cholecalciferol 50 mcg (2,000 unit) capsule	Take 2 capsules by mouth daily.					Active
polyethylene glycol 3350 17 g packet	Take 1 packet by mouth daily. Dissolve in 4-8 ounce water.					Active
acetaminophen 325 MG tablet	Take 3 tablets by mouth every 8 hours.			07/30/2026		Active
lidocaine viscous 2 % mouth/ throat solution	Take 5 mL by mouth 4 times a day as needed (for throat pain). To avoid numbing tongue, use straw/applicator to apply to back of throat).	200 mL		08/06/2026		Active
pantoprazole 40 MG EC tablet	Take 1 tablet by mouth daily on an empty stomach.	20 tablet		08/06/2026		Active
anastrozole 1 MG tablet	Take 1 tablet by mouth daily.	30 tablet		08/21/2026		Active
ondansetron 8 MG tablet	Take 1 tablet by mouth every 8 hours.	90 tablet		07/30/2026	08/29/2026	Expired
senna 8.6 MG tablet	Take 2 tablets by mouth 2 times a day.	120 tablet		07/30/2026	08/29/2026	Expired
ribociclib (600 mg dose) 200 MG tablet therapy pack	Take 3 tablets by mouth daily. Take on days 1 to 21 followed by 7 days off. Repeat every 28 days. Do not take first dose until directed by clinical team.	63 tablet		08/10/2026	08/28/2026	Discontinued (Med list cleanup)
methocarbamol 750 MG tablet	Take 1 tablet by mouth every 6 hours as needed for muscle spasms.	30 tablet		08/10/2026	09/09/2026	Expired
oxyCODONE 10 MG tablet	Take 1-1.5 tablets by mouth every 3 hours as needed for moderate pain.	170 tablet		08/10/2026	09/23/2026	Discontinued (Reorder)
morphine ER 30 MG ER tablet	Take 1 tablet by mouth every 8 hours. Take with a 15 mg tablet for a total of 45 mg every 8 hours	42 tablet		08/21/2026	09/07/2026	Discontinued (Reorder)
morphine ER 15 MG ER tablet	Take 1 tablet by mouth every 8 hours. Take with a 30 mg tablet for a total of 45 mg every 8 hours	42 tablet		08/21/2026	09/07/2026	Discontinued (Reorder)
prochlorperazine 10 MG tablet	Take 1 tablet by mouth every 6 hours as needed for nausea/vomiting.	50 tablet		08/21/2026	09/25/2026	Expired

Narrative

08/29/2026 6:41 AM PDT

This result has an attachment that is not available.

PROCEDURE: CT scan of the thoracolumbar spine. August 28, 2026 0850 hours

Clinical History: Thoracic and lumbar metastasis. Evaluate for compression fractures. Please extend to include sacrum and pelvis.

Technique: Helical axial sections with sagittal and coronal reformats of the thoracolumbar spine were obtained with intravenous contrast. Iterative reconstruction technique was employed to reduce patient radiation exposure.

Radiation Dose: Total exam DLP 519 mGy/cm.

Comparison: Compared with the prior CT whole spine study dated July 27, 2026 and correlated with the prior MR spine study dated July 27, 2026

Findings:
Straightening of the thoraco-lumbar spine. Multifocal lytic lesions involving in vertebral bodies and posterior elements, unchanged since the prior study.
Again seen are compression fracture deformities of the T1, T4, T5 and T8 vertebral bodies with a mild reduction in the vertebral body heights, similar to the prior CT and MRI study. Again seen is extraosseous soft tissue extension of the right transverse process lytic lesion resulting in right T8/T9 neural foraminal narrowing, also unchanged since the prior study.
There is a similar dominant S1 lytic lesion with posterior cortical destruction and extra-osseous anterior epidural soft tissue mass, measuring 2.6 x 1.6 cm in axial dimensions (image 798, series 304). The lesion compresses anterior thecal sac.
Another lytic lesion at the S2/3 level also compresses thecal sac and narrows the adjacent right foraminal canal, unchanged.
Multifocal lytic lesions involving sternum, ribs, scapulae, and pelvic girdles, unchanged.

Impression:
Multifocal lytic lesions involving the axial and appendicular skeleton with compression fracture deformities of the thoracic vertebrae and similar dominant soft tissue component surrounding the S1, S2/S3 lytic lesions causing canal compromise as detailed above.

PROCEDURE: CT scan of the thoracolumbar spine. August 28, 2026 0850 hours

Clinical History: Thoracic and lumbar metastasis. Evaluate for compression fractures. Please extend to include sacrum and pelvis.

Technique: Helical axial sections with sagittal and coronal reformats of the thoracolumbar spine were obtained with intravenous contrast. Iterative reconstruction technique was employed to reduce patient radiation exposure.

Radiation Dose: Total exam DLP 519 mGy/cm.

Comparison: Compared with the prior CT whole spine study dated July 27, 2026 and correlated with the prior MR spine study dated July 27, 2026

Findings:
Straightening of the thoraco-lumbar spine. Multifocal lytic lesions involving in vertebral bodies and posterior elements, unchanged since the prior study.
Again seen are compression fracture deformities of the T1, T4, T5 and T8 vertebral bodies with a mild reduction in the vertebral body heights, similar to the prior CT and MRI study. Again seen is extraosseous soft tissue extension of the right transverse process lytic lesion resulting in right T8/T9 neural foraminal narrowing, also unchanged since the prior study.
There is a similar dominant S1 lytic lesion with posterior cortical destruction and extra-osseous anterior epidural soft tissue mass, measuring 2.6 x 1.6 cm in axial dimensions (image 798, series 304). The lesion compresses anterior thecal sac.
Another lytic lesion at the S2/3 level also compresses thecal sac and narrows the adjacent right foraminal canal, unchanged.
Multifocal lytic lesions involving sternum, ribs, scapulae, and pelvic girdles, unchanged.

Impression:
Multifocal lytic lesions involving the axial and appendicular skeleton with compression fracture deformities of the thoracic vertebrae and similar dominant soft tissue component surrounding the S1, S2/S3 lytic lesions causing canal compromise as detailed above.

INTERVENTIONAL RADIOLOGY OUTPATIENT CONSULT NOTE

REFERRING PHYSICIAN
Amin Gautam, MD

IDENTIFICATION AND CHIEF COMPLAINT
Yvonne K Franklin is a 47 year old female patient who is referred to interventional radiology for consideration of treatment options for vertebral augmentation.

Interval History:

She arrives for corresponding physical exam from our visit last week. Her pain is similar, with focal pain mid-back with moving, and more significant pain when attempting to bend at her low back. She reports difficulty taking deep breaths. Her overall pain is "microscopically" better than last week.

HISTORY OF PRESENT ILLNESS -The history is from the patient as well as from review of medical records.

Pt was recently admitted for pain control of significant metastatic disease. MRI demonstrates spinal metastases with several levels of compression fractures of varying acuity. No surgical intervention was indicated per NSGY, and patient was discharged following adequate pain control. She has received outpatient radiation therapy three weeks ago.

Since 3 weeks ago, her pain is significantly better in her neck. However, she is having significant pain with motion in the upper spine can get to an 8 or 9. She can't bend, turn, and she is limiting her motion, as well as limiting breathing.

She also has significant pain in the hip with bending and motion 9-10 though not a direct correlate with prior imaging.

PAST MEDICAL HISTORY

Active Ambulatory Problems

	Diagnosis	Date Noted
•	Secondary malignant neoplasm of bone (HCC)	07/22/2026

IMAGING STUDIES
[image][image]

CT T-L spine today 8-28-26
T8 has progressed in fracture, T9 slightly worse along the inferior endplate.

[image]

[image]

[image]
S1 has fractured in the interval

[image]
L5- approximately the same, maybe slightly worse.

Physical Exam:
Gen: NAD shivering
Lungs: Breathing well on room air
CV: WWP
Focal pain over the sacrum/coccyx region, and mid-scapula back on palpation

ASSESSMENT AND PLAN
Yvonne K Franklin is a 47 year old female with recently diagnosed metastatic breast cancer and extensive spinal metastases. Since receiving radiation therapy, she has improved in regards to her pain however has significant motion related pain up to 8-9/10 with compression fractures in her mid-upper back, likely correlating with T8. Diffuse metastases throughout the spine.

- X-ray fiducial to confirm if only T8 area or if T3-T5 will need to be treated. Based on exam, unlikely.
- Plan T8, S1 unipedicular kyphoplasty, biopsy, and ablation with general anesthesia. Possible T9 depending on appearance on day of procedure.
- Referral to Dr. Kang for possible radiation to sacrum/coccyx given symptoms
- She would be ok with participating in the research biobank (formal consent to be done)
- Hold AC as per guidelines.

Avik Som, MD, PhD
UW Interventional Radiology

I spent 30 minutes on exam and care with the patient.

Oral Chemotherapy Monitoring Program

Oral chemotherapy management per FHCC CDTA

Yvonne Kalley Franklin is a 47 year old female contacted for follow up by phone for oral chemotherapy treatment monitoring.

Indication: de novo metastatic ER+/PR+, HER2-negative breast cancer
Treatment Plan/Dose: Ribociclib 600mg PO daily D1-21 q 28 days
Cycle: Subsequent Review-Refill Rx

Cycle Start Date: 08/15/26
Anticipated Next Cycle Start Date: 09/12/26

Treatment delayed or held?: No

Problem list

Patient Active Problem List

Diagnosis
• Secondary malignant neoplasm of bone (HCC)
• Neck pain
• Cancer related pain
• Breast cancer metastasized to bone, unspecified laterality (HCC)
• Acute bilateral thoracic back pain
• Pathologic compression fracture of vertebra (HCC)
• Metastatic malignant neoplasm (HCC)
• Cancer, metastatic to bone (HCC)

Allergies Review of patient's allergies indicates:

Allergies

Allergen	Reactions	
•	Propofol	Palpitations and Other
		PVC's *Palpitation*
•	Fentanyl	Other
		Isolated PVCs *8/20/2026 states took Fentanyl without incident.*

Current Outpatient Medications

Medication	Instructions	
•	acetaminophen (TYLENOL)	975 mg, Every 8 hours scheduled
•	albuterol HFA 108 (90 Base) MCG/ACT inhaler	2 puffs, Every 4 hours PRN
•	anastrozole (ARIMIDEX)	1 mg, Oral, Daily
•	cholecalciferol (VITAMIN D-3)	4,000 units, Daily
•	lidocaine viscous 2 % mouth/ throat solution	5 mL, Oral, 4 times daily PRN
•	methocarbamol (ROBAXIN)	750 mg, Oral, Every 6 hours PRN
•	morphine ER (MS CONTIN)	30 mg, Oral, Every 8 hours scheduled, Take with a 15 mg tablet for a total of 45 mg every 8 hours
•	morphine ER (MS CONTIN)	15 mg, Oral, Every 8 hours scheduled, Take with a 30 mg tablet for a total of 45 mg every 8 hours
•	naloxone 4 MG/0.1ML nasal spray	Use 1 spray in one nostril for suspected opioid overdose. Call 911. If unresponsive in 2 to 3 minutes, repeat with new naloxone nasal spray in opposite nostril.
•	ondansetron (ZOFRAN)	8 mg, Oral, Every 8 hours scheduled
•	oxyCODONE	10-15 mg, Oral, Every 3 hours PRN
•	pantoprazole (PROTONIX)	40 mg, Oral, Daily empty stomach
•	polyethylene glycol 3350 (MIRALAX)	17 g, Daily
•	prochlorperazine (COMPAZINE)	10 mg, Oral, Every 6 hours PRN
•	propranolol (INDERAL)	10 mg, Daily
•	ribociclib (600 mg dose) (KISQALI)	600 mg, Oral, Daily, Take on days 1 to 21 followed by 7 days off. Repeat every 28 days. Do not take first dose until directed by clinical team.
•	senna (SENOKOT)	17.2 mg, Oral, 2 times daily
•	tretinoin 0.025 % cream	1 application, 3 times weekly

Medication History
Pt reports changes to their medication on med list: Yes
Comments: Added calcium (already on vitamin D)

Possible drug interactions:
Rx Interactions
Clinically relevant drug interactions identified?: No

Adherence Assessment:
Rx-Adherence
Was adherence assessed during this encounter?: Yes
Patient reported X missed doses in the last month: 0
Patient reported taking incorrect dose in the last month: No
Concerns for Adherence?: No

Symptom/Toxicities Assessment:
Patient reports the following side effects:
Side effects to report?: Yes

General: Fatigue: Grade 1 (Mild, able to do ADLs);

Gastrointestinal: Nausea: Grade 1 (Will switch from compazine BID to ondansetron BID as it works better - will monitor for constipation);

Interventions and Follow-up Plan:

Plan: 8/28 labs reviewed and QTcF 451ms today - OK to proceed with current cycle of ribociclib. She plans on switching from compazine BID to ondansetron BID as is more effective, but she is wary about constipation. CTM. If needing scheduled ondansetron in the future, consider additional EKG given mild QTcF elevation.

A prescription for ribociclib will be sent to CVS Specialty pharmacy. Future refills will be managed by the FHCC Oral Chemotherapy Service.

Follow-up Dates:
Date of next outreach:: 09/11/26
Next Outreach type:: Phone
Date of next pharmacist lab review:: 09/11/26
Next refill due: 11/20/26
Reference: MONALEESA-2

FRED HUTCHINSON CANCER CENTER
BREAST ONCOLOGY NEW PATIENT VISIT

Use of Ambient Listening:
Was ambient listening technology used during this visit and was verbal consent for recording obtained? **Yes, used in visit. Consent was obtained.**
?
ID/CC: 47-year-old premenopausal woman with de novo metastatic ER+/PR+, HER2-negative breast cancer with predominantly osseous metastatic disease, who presents today for follow up on ribociclib.

ONCOLOGY HISTORY:
-February 2026: Developed back pain which got progressively worse
-7/1/26: MRI spine showed expansile lesions in T1, T5, T8-T10 with expansile element in T10
-7/13/26: CT chest/abdomen/pelvis showed diffuse bony lesions throughout spine and pelvis and left 11th rib fracture as well as a few scattered lung nodules.
-7/21/26: PET-CT w FDG lesions in L breast, R axilla, FDG avid osseous lesions, compression fracture.
-7/22/26: L breast core biopsy showed invasive lobular carcinoma, ER+ (91-100%), PR+ (91-100%), HER2- (1+ by IHC), Ki-67 21-30% , Right axilla LN biopsy showed metastatic carcinoma
-7/24/26: Right iliac crest biopsy showed metastatic carcinoma
-7/27/26-7/30/26: Admitted for pain control, she received palliative radiation with 800 cGy over 1 fraction to the right hip joint, started on lupron and anastrozole, also received zometa as an inpatient
8/15/26: Start Ribociclib

HPI: Please see detailed oncology history above. We spent the majority of the visit reviewing the diagnosis and discussing treatment recommendations. Please see details in the assessment and plan.

History of Present Illness
Yvonne Kalley Franklin is a 47-year-old female with metastatic hormone receptor-positive, HER2-negative breast cancer with extensive bone metastases who presents for oncology follow-up to assess treatment tolerance and symptom management.

Cancer-Related Pain and Neurologic Symptoms:
- No new or worsening pain
- No neurologic symptoms, weakness or sensory changes
- No changes in mobility or sensation
- No new breast or soft tissue lumps or open lesions

Fatigue:
- Severe fatigue during first week of CDK4/6 inhibitor therapy
- Energy has improved but remains reduced, no impact to ADLs

Chemotherapy-Induced Nausea and Vomiting:
- Significant nausea and vomiting early in treatment, including one episode requiring emergency department evaluation
- Nausea now controlled with daily Compazine and as-needed Zofran
- Limits Zofran use due to constipation
- One vomiting episode yesterday, though this remains rare for her
- Appetite remains low
- Intentionally increasing protein intake

Drug-Induced Constipation and Bowel Function:
- Severe constipation initially, attributed to opioids and Zofran
- Required aggressive bowel regimen, resulting in transient diarrhea
- Currently has regular bowel movements with daily Miralax and scheduled Senna
- No current bowel issues

Antineoplastic Therapy-Induced Neutropenia:
- Mild neutropenia with ANC of 1.1
- No fever, respiratory, or urinary symptoms

Abnormal Vaginal Bleeding and Menopausal Symptoms:
- Received first Lupron injection about one month ago
- Had a menstrual period after initial ovarian suppression, no current bleeding
- No menopausal symptoms such as hot flashes

Bone Protection Therapy (Zometa):
- No significant side effects from first Zometa infusion
- Aware of potential for flu-like symptoms after today's dose
- Plans to use Tylenol-containing medications as needed

Disease Management and Quality of Life:
- Engaged in care and prioritizes disease control and quality of life

ROS: Complete ROS was reviewed and was negative unless stated above in the HPI

ECOG: 0 (prior to diagnosis)

PMH
Medical History

Gynecology History:
Menopausal Status: premenopausal

HRT use: Denies
OCP use: Yes, from 18-33 then had IUDs (IUD recently removed)

MEDICATIONS

Outpatient Medications Prior to Visit

Medication	Sig	Dispense	Refill	
•	acetaminophen 325 MG tablet	Take 3 tablets by mouth every 8 hours.		
•	albuterol HFA 108 (90 Base) MCG/ACT inhaler	Inhale 2 puffs by mouth every 4 hours as needed for shortness of breath/wheezing.		
•	anastrozole 1 MG tablet	Take 1 tablet by mouth daily.	30 tablet	11
•	cholecalciferol 50 mcg (2,000 unit) capsule	Take 2 capsules by mouth daily.		
•	lidocaine viscous 2 % mouth/throat solution	Take 5 mL by mouth 4 times a day as needed (for throat pain). To avoid numbing tongue, use straw/applicator to apply to back of throat). (Patient not taking: Reported on 8/28/2026)	200 mL	1
•	methocarbamol 750 MG tablet	Take 1 tablet by mouth every 6 hours as needed for muscle spasms.	30 tablet	0
•	morphine ER 15 MG ER tablet	Take 1 tablet by mouth every 8 hours. Take with a 30 mg tablet for a total of 45 mg every 8 hours	42 tablet	0
•	morphine ER 30 MG ER tablet	Take 1 tablet by mouth every 8 hours. Take with a 15 mg tablet for a total of 45 mg every 8 hours	42 tablet	0
•	naloxone 4 MG/0.1ML nasal spray	Use 1 spray in one nostril for suspected opioid overdose. Call 911. If unresponsive in 2 to 3 minutes, repeat with new naloxone nasal spray in opposite nostril.	2 each	0
•	ondansetron 8 MG tablet	Take 1 tablet by mouth every 8 hours.	90 tablet	0
•	oxyCODONE 10 MG tablet	Take 1-1.5 tablets by mouth every 3 hours as needed for moderate pain.	170 tablet	0
•	pantoprazole 40 MG EC tablet	Take 1 tablet by mouth daily on an empty stomach. (Patient not taking: Reported on 8/28/2026)	20 tablet	0
•	polyethylene glycol 3350 17 g packet	Take 1 packet by mouth daily. Dissolve in 4-8 ounce water.		
•	prochlorperazine 10 MG tablet	Take 1 tablet by mouth every 6 hours as needed for nausea/ vomiting.	50 tablet	0
•	propranolol 10 MG tablet	Take 1 tablet by mouth daily.		
•	ribociclib (600 mg dose) 200 MG tablet therapy pack	Take 3 tablets by mouth daily. Take on days 1 to 21 followed by 7 days off. Repeat every 28 days. Do not take first dose until directed by clinical team.	63 tablet	0
•	senna 8.6 MG tablet	Take 2 tablets by mouth 2 times a day.	120 tablet	0
•	tretinoin 0.025 % cream	Apply 1 application topically 3 times a week. Apply to face.		

No facility-administered medications prior to visit.

ALLERGIES
Review of patient's allergies indicates:

Allergies

Allergen	Reactions	
•	Propofol	Palpitations and Other
		PVC's *Palpitation*
•	Fentanyl	Other
		Isolated PVCs *8/20/2026 states took Fentanyl without incident.*

SOCIAL HISTORY: Accompanied today by her husband. She has two children ages 9 and 11.
EtOH:She drinks 1-2 drinks alcohol on a few to most nights of the week.
Tobacco: Never smoker
Recreational Drugs: Denies

IMAGING
Pending

ASSESSMENT/PLAN: 47-year-old premenopausal woman with de novo metastatic ER+/PR+, HER2-negative breast cancer with predominantly osseous metastatic disease, who presents today for follow up on Ribociclib
Assessment & Plan
Breast cancer metastasized to bone, unspecified laterality (HCC)
Metastatic breast cancer with extensive osseous disease. Early in CDK4/6 inhibitor, endocrine therapy, Lupron, and Zometa. Palliative intent. Tolerating with manageable AEs. Discussed treatment sequencing, QoL, and clinical trials if possible
- Continue current systemic therapy, Lupron, and Zometa.
- Lupron injection today, second dose - we discussed that we do not anticipate further episodes of vaginal bleeding and she should report it
- Zometa infusion today, second dose. Continue regular infusions. Monitor flu-like symptoms and fever.
- Plan imaging after approximately 3 months of therapy unless symptoms worsen.
- Monitor tumor markers, molecular testing, clinical symptoms, CBC, and neutrophils. Frequent CBCs initially, then decrease frequency as counts stabilize. EKG monitoring
- Nutrition referral
- Frequent follow-up for toxicity and complications.
- Reviewed expected response timeline and reportable symptoms including nausea, vomiting, constipation, fatigue, bone pain, menopausal symptoms, infection, vaginal bleeding, new pain, or neurologic symptoms.

Neoplasm-related pain
Osseous pain controlled with oxycodone and morphine. Kyphoplasty planned to hopefully improve pain and mobility, reduce opioid needs.
- Continue oxycodone and morphine.
- Proceed with ortho and spine surgery team
- Monitor pain and adjust analgesics as needed.
- Monitor for new or worsening pain or neurologic symptoms.

Antineoplastic therapy-induced neutropenia
Mild neutropenia, neutrophil count 1.1, acceptable for CDK4/6 inhibitor therapy.
- Monitor CBC and neutrophils closely during initial cycles.
- Reviewed hand hygiene and avoidance of sick contacts.
- Report upper respiratory symptoms, fever, or urinary symptoms promptly.

Chemotherapy-induced nausea and vomiting
Previously required emergency care, now controlled with scheduled Compazine and as-needed Zofran. Limits Zofran due to constipation.
- Continue scheduled Compazine PRN
- Use Zofran as needed for breakthrough nausea
- Encouraged oral intake and hydration.

Drug-induced constipation
Previously severe from opioids and antiemetics, now controlled with daily Miralax and scheduled Senna. Ongoing risk with continued therapy.
- Continue daily Miralax, 1 packet daily with minimal fluid volume.
- Continue Senna twice daily.
- Monitor bowel habits and adjust regimen as needed.

Fatigue
Severe during first week of CDK4/6 inhibitor therapy, now improved. Low energy but functional. Likely multifactorial from malignancy and therapy, with low appetite contributing.
- Monitor fatigue and energy at follow-up.
- Reassured fatigue may improve with disease control and medication adjustment.
- Provide supportive care and address contributing factors including low appetite.

Disposition: RTC 2 weeks review labs, EKG and provider visit.
Advised to contact the clinic with any questions or concerns in the interim.

To patients reading this note: Please be advised that the primary purpose of this note is for me to communicate other members of your medical team. Standard sentence structure is not always used. Medical terminology, abbreviations and acronyms may be used that are unfamiliar.

I spent a total of 30 minutes for the patient's care on the date of the service.

zoledronic acid 4 mg in 100 mL IVPB (premix)	08/28/2026 15:05	New Bag/ Syringe	4 mg	Intravenous	Tran, Amber Lee, RN
Ordering Provider: Symonds, Lynn Katherine, MD					
NDC: 25021-826-82					

Assessment and Plan:

Hand off: No

Discharge:
Patient tolerated treatment well and without complications.
Discharge disposition:
Accompanied by: Family
Discharged to: Home
Response: Aware of existing appointments, Aware of clinic contact information, States understanding of plan, Restates plan, and No further questions
Preferred language: English
Interpretation/Language Services: No interpreter

Summary: Pt reports ongoing back pain that is well controlled with analgesics as needed. Pt also had an isolated episode of vomiting x1 yesterday, taking antiemetics as needed and denies N/V today. Ok to proceed with lupron per Symonds, L. MD. Pt tolerated tx well and aware to call if having new or worsening sx. PIV removed and discharge stable.

Additional documentation may exist in Flowsheets or Education Activity

FHCC PALLIATIVE CARE NOTE

VISIT INFORMATION:
Date of Service: 8/26/2026
Type of Visit: Return Visit
Referral Reason: Cancer-related pain, Symptom management (non-pain), and Emotional support/coping

ID/CC: 47 year old female with de novo metastatic breast cancer with osseous metastases. Diagnosed 07/2026. Admission 7/27/26 for pain. Currently on Lupron and anastrozole. Awaiting start of ribociclib. ACE visit 8/12/26 for increased pain.

Use of Ambient Listening:
Was ambient listening technology used during this visit and was verbal consent for recording obtained? **Yes, used in visit. Consent was obtained.**
?

Treatment goal	[No plan goal]
Plan Name	OP Ribociclib + Endocrine Therapy
Start Date	8/15/2026 (Planned)
End Date	11/7/2026 (Planned)

Addressed during this visit: Patient's narrative, Symptom management, Optimizing quality of life, and Education about palliative care
Participants: Patient

History of Present Illness
Yvonne Kalley Franklin is a 47 year old woman with metastatic breast cancer here today for follow up.

Cancer-related pain gradually improved after a recent morphine increase with decreased need for breakthrough oxycodone. Oxycodone 15 mg now taken about every 5 hours rather than every 3 hours, consistently for the past week; increasing pain becomes noticeable as the 5-hour mark approaches. Movement-triggered pain remains most limiting, especially transitions and core-engaging motions such as getting up or sitting down, turning or twisting in bed; pain is more tolerable when sitting still.

Early ribociclib course complicated by an ED evaluation over the weekend for headache and vomiting with inability to keep down food or water; symptoms resolved and ribociclib is now tolerated. Currently on day 12. Constipation improved with reduced oxycodone use, with daily morning bowel movements until today. Nausea improved overall; antiemetic taken last night after nausea following eggs. Appetite remains poor with little hunger; intentionally eating with focus on protein and whole foods and avoiding fried foods.

Interventional radiology visit with Dr. Sam last Friday addressed possible kyphoplasty; the team is leaning toward intervention, at least at T8. Prior radiation helped with pain control, particularly in the neck; interventional radiology is also considering whether neck disease would require a different procedure, possibly surgery.

Sleep generally adequate without difficulty falling asleep or returning to sleep; wakes around 3 AM for oxycodone and returns to sleep quickly. Turning and positioning in bed can be painful and disruptive. Fatigue was marked during the first week on ribociclib and has improved, with intermittent afternoon tiredness and occasional naps. Activity level remains high with a focus on

movement, including walking about 4-6 miles per day. Mood largely positive with intermittent tearfulness and uncertainty; baseline anxiety with prior short-term anxiolytic use and no current spiraling.

Goals of Care
I discussed my role in palliative care and how our team can support her alongside oncology and interventional radiology. She shared understanding that symptom improvement is expected to be gradual and that ongoing pain can reflect both healing fractures and disease, and she voiced worry about the unknowns of whether treatment is working and whether she will be able to return to her prior baseline. I reinforced a hopeful trajectory given symptom stabilization and early improvements, while setting expectations that healing and treatment response take time.

She identified priorities of improved quality of life through better mobility, less pain, and reduced opioid needs, with the goal of resuming normal daily functioning and returning to work. She described meaningful time with her husband and children and noted that staying focused on controllable steps and appointments has helped her cope. She acknowledged a history of anxiety and discussed monitoring for worsening anxiety or spiraling, with openness to short term medication support if needed.

We explored decision making around upcoming kyphoplasty, including her weighing potential risks of a spine procedure against anticipated benefits for pain relief and mobility. I emphasized coordination with Dr Symonds and the interventional radiology team regarding timing and whether ribociclib should be held around the procedure. She also sought guidance about a work trip to New York in late September. We discussed practical burdens and symptom risks with travel, including prolonged sitting on a plane and managing luggage, especially if kyphoplasty occurs in the next few weeks. She expressed that the timing does not feel right and is leaning toward deferring travel.

I offered social work support through our team for coping strategies, communication with children, work related stressors, and potential resource needs. She expressed interest in connecting but prefers to defer scheduling until the current cluster of appointments and decisions settles, and plans to message me when ready. Code status, surrogate decision maker, and advance directives were not discussed.

Assessment & Plan
Cancer-related pain management
Pain improving with current opioids; moderate pain persists due to vertebral fractures and osseous metastases. Fracture healing contributes to ongoing pain.
- Continue Morphine ER 45 mg every 8 hours.
- Continue oxycodone 15 mg every 4 hours PRN for pain. Currently using every 5 hours.
- Coordinate with Interventional Radiology for kyphoplasty evaluation to address fracture-related pain.
- Provide anticipatory guidance on analgesic trajectory during fracture healing.
- Reassess refill interval strategy at next refill based on pain control and procedural timing.

Metastatic breast cancer to bone
Receiving ribociclib, anastrozole, Lupron, and bone-targeted infusion; recent radiation provided partial pain relief. Planning spine stabilization intervention.
- Continue ribociclib with close monitoring; obtain first on-treatment labs Friday.
- Administer Lupron and bone infusion Friday.
- Attend Interventional Radiology follow-up for imaging and procedural planning.
- Discuss medication timing around kyphoplasty with oncology and Interventional Radiology.

Opioid-induced constipation
Constipation improved with decreased oxycodone use; near-daily bowel movements.
- may continue Senna and Miralax. Current regmimen effective.
- Monitor for constipation recurrence, especially with antiemetic use or increased opioid dosing.

Nausea and decreased appetite
Nausea improved after initial ribociclib intolerance; appetite poor but intake prioritized for protein and whole foods.
- Continue antiemetics as prescribed.
- Eat small amounts frequently, prioritize protein and nutrient-dense foods.
- Emphasize hydration.
- Identify dietary triggers worsening nausea or intake tolerance.

Fatigue
Fatigue improved after initial ribociclib week; intermittent tiredness persists with high activity level.
- Allow rest and naps as needed while monitoring impact on function and quality of life.
- Continue activity and movement as tolerated.

Adjustment disorder with anxiety
Mood positive with intermittent distress and uncertainty about treatment response; baseline anxiety present but manageable.
- Monitor mood and anxiety symptoms; report worsening anxiety or impaired function.
- Consider short-term mood-stabilizing or anxiolytic medication if symptoms worsen.

Palliative care
Ongoing palliative care for symptom management, care coordination, and psychosocial support. Anticipates return to work and considering travel.

- Follow up in a couple of weeks to reassess symptoms and coordinate around kyphoplasty timing.
- Offer palliative care social work referral for counseling/CBT and practical supports.
- Consider introducing social worker in future visit to streamline communication.

Pain
Pain Source: Cancer
Opioid Prescriber: Palliative
Long Acting Opioid (strength/dose/qty): Morphine ER 45 mg TID
Short Acting Opioid (strength/dose/qty): Oxycodone 10-15 mg every 3-4 hours PRN for pain. Currently using 15 mg every 5 hours.
Adjuvant Meds: methocarbamol 750 mg every 6 hours, Tylenol 1000 mg TID
MED: 250
PMP Check (08/04/26): Yes
Opioid agreement:signed Yes

DISPOSITION:
Follow up visit in 2-3 weeks

FUNCTIONAL ASSESSMENT:
ECOG Performance Scale: (1) Restricted in physically strenuous activity, ambulatory and able to do work of light nature
Palliative Performance Scale:
Prognosis: Uncertain of prognosis

Subjective
PALLIATIVE CARE DISCUSSION:
Social History: Lives in Kirkland with husband Mark. 2 children ages 9 and 11. Corporate job. Working full time but planning to take the next month to treat pain and start treatment.
Understanding/Perspective of Illness: Metastatic disease. Treatment is palliative
Hopes, Strengths And What Brings Life Meaning Or Purpose: More time with 2 kids and family. Continuing to work and do the normal things.
Fears, Concerns, Worries: Worries about pain and controlling symptoms
Communication Preferences: Appreciates detail focused information. Uutilizes MyChart, telehealth as appropriate.
Role Of Spirituality, Faith, Religion, Spiritual Assessment:
Past Experience With Serious Illness/Hospice:
Acceptable Quality Of Life:

Advance Care Planning
FHCC ACP

Legal Next of Kin: Husband Mark
DPOAHC:
POLST:
Living Will/Advanced Directive:

Objective
GENERAL INFORMATION:
Care Team: Patient Care Team:
Paras, Leilani D, MD as PCP - General (Family Practice)
Purcell, William Thomas, MD as Oncologist (Hematology-Oncology)
Shepherd, Annemarie, MD (Radiation Oncology)
Kang, John, MD as Primary Contact (Radiation Oncology)
Symonds, Lynn Katherine, MD as Oncologist (Hematology-Oncology)
Brustkern, Amy K, PA-C as Physician Assistant (Palliative Medicine)

IMPORTANT CLINICAL HISTORY:
Imaging: 7/27/26 MRI C-T-L
IMPRESSION

1. No cord compression. Anterior epidural tumor extension at T5 and T8 levels
Diffuse osseous metastasis multiple cervical, thoracic and lumbar vertebral bodies. Pathologic fractures involving T4, T5 and T8 vertebral bodies with mild height loss at T5 (40%).

This is a preliminary report dictated by Abraham Mengstu M.D., neuroradiology fellow (PGY-6).

Unless an Attending Final Impression appears below, the report has not yet been finalized and an attending radiologist has not reviewed these images.
Pathology: 7/24/26 A) Right iliac crest, biopsy:
- Metastatic carcinoma.

Treatment History: Lupron + AI. Awaiting approval for Ribociclib.

Oncology History Overview Note

7/1/26: MRI T Spine
IMPRESSION:
Diffusely heterogeneous T1 hypointense and multifocal T2 hyperintense marrow signal including 2.3 x 2.3 cm expansile aneurysmal bone cyst like lesion in T5 vetebral body and similar lesions in T1, T8, T9, T10 and vertebral bodies, as well as 1.2 x 1.1 cm expansile T1 isointense, T2 hyperintense lesion in the posterior elements of T10. Additionally there is a 1.8cm ovoid T2 hyperintense mass in the visualized posterior right liver lobe. While multiple aneurysmal bone cysts is a small possibility, the appearance is highly concerning for metastases from unknown primary. Recommend CT chest, abdomena nd pelvis with contrast or PET/CT for further evaluation.
Compression deformities of T1, T4, T5 and T8 vertebral bodies which may be pathologic.
Mild bilateral neural foraminal narrowing at T8-9 secondary to bony expansion.

7/13/26: CT Chest
IMPRESSION
* Multiple osseous lytic lesions, as described, concerning for a neoplastic process.
* Fracture of the left 11th rib.
* A few scattered nodules, measuring up to 4 mm. In the context of a potential primary malignancy, a follow-up CT of the chest in 3 months is advised.

7/13/26: CT A/P
IMPRESSION
Diffuse lytic bone lesions throughout the spine and pelvis without CT evidence of primary malignancy in the abdomen or pelvis. Small bilateral ovarian cysts would be better characterized on transvaginal ultrasound.

7/22/26 PET/MR: Lt breast lesion 3.3x2.4cm SUVmax 1.9 with Rt axillary node 9x8mm SUVmax 2.0. Innumerable bony foci including compression fractures of T4, T8, L5.

7/15/26 Dx imaging: ***Left*** Status post breast reduction. Left breast 9 mm x 7 mm x 11 mm mass at 1 o'clock with ill-defined heterogeneous tissue seen more medially. There is no definite mammographic correlate. Assessment: 4 - Suspicious finding. Left breast 7 mm x 4 mm x 7 mm oval circumscribed mass at 2 o'clock. Assessment: 3 - Probably benign Left breast normal-appearing intramammary lymph node at 2 o'clock. Assessment: 2 - Benign finding. ***Right*** Status post breast reduction. Right breast 13 mm x 8 mm x 15 mm simple cyst at 5 o'clock. Assessment: 2 - Benign finding. At least three morphologically abnormal right axillary lymph nodes. Assessment: 4 - Suspicious finding.

7/21/26 PET/CT:
Mild to moderately FDG-avid lesion in the left lateral breast, concerning for a primary breast neoplasm. No left axillary lymphadenopathy or abnormal FDG uptake within the left axillary lymph nodes. Moderately FDG-avid right axillary lymph node, suspicious for metastatic involvement.
Innumerable markedly intense FDG-avid osseous lesions throughout the axial and appendicular skeleton, with associated compression fractures involving several vertebral bodies, consistent with widespread metastatic disease. * Given the markedly greater extent and intensity of skeletal FDG uptake relative to the left breast lesion, along with the absence of ipsilateral axillary nodal involvement, the pattern of metastatic disease is atypical for a breast primary, and an alternative primary malignancy should be considered.
* Mild to moderately avid left lateral breast lesion, possible neoplastic involvement. No left axillary lymphadenopathy or abnormal FDG uptake within the lymph nodes. * Moderately avid right axillary lymph node, concerning for metastatic.* Innumerable foci of intense FDG uptake involving axial and appendicular skeleton, with compression fractures of few vertebrae, likely metastatic. The intensity of the FDG uptake in the bone metastatic disease in comparison to the breast lesion and negative left lymph node involvement make it less likely to be originaria from the breast.
7/22/26 Left breast bx 1:00 7N: ILC G2 ER (91-100%) PR (91-100%) Her2 (1+) Ki67 21-30%
Right axillary LN: Metastatic carcinoma, Neoplastic cells are morphologically similar to the findings in part A, compatible with metastasis from breast primary

7/24/26 Right iliac crest bx: metastatic carcinoma

7/27/26 CT Full spine * Extensive lytic osseous metastases involving multilevel vertebral bodies and posterior elements. Redemonstrated age-indeterminant mild pathologic fractures (<25% height loss) in the C4, C6, T1, T4, T5, T8, and L5 levels. Findings are grossly similar to the prior PET/MR. * No definite new evidence of significant vertebral fracture or subluxation. * Of note, there are some extra-osseous extension involving left C4/5, left C6/7, and right T8/9 foraminal canals, and S1, S2/3 anterior epidural extension, resulting in spinal canal narrowing as described. Findings are similar to the 07/13/2026 abdominal CT. Consider MRI for evaluation of epidural/foraminal canal involvement if clinically warranted.* Of note, the left C4 and C6 lateral process involvement may involve the left V2 vertebral artery. Consider neck CTA to evaluate luminal patency if clinically warranted.

7/27/26 CT head/neck: Normal head CT. No acute infarct, hemorrhage or mass effect. Normal CTA head. No high-grade stenosis or occlusion. Normal CTA of the neck vessels. No stenosis, dissection or occlusion. Internal carotid artery origin stenosis by NASCET criteria: No significant stenosis by NASCET criteria
7/27/26 MRI Spine: No cord compression. Anterior epidural tumor extension at T5 and T8 levels
Diffuse osseous metastasis multiple cervical, thoracic and lumbar vertebral bodies. Pathologic fractures involving T4, T5 and T8 vertebral bodies with mild height loss at T5 (40%).

7/28/26 XR T spine: On the standing AP, lateral, and swimmer's views, skin metallic markers are noted at apparent levels of pain centered at the T1/2 level and the upper T7 level. The multiple lytic lesions throughout the thoracic spine are better visualized on the prior day CT but grossly stable again consistent with bony metastases without definite evidence of gross pathologic fracture. Again there is essential anatomic alignment on the lateral and frontal views. There are mild degenerative disc changes in the mid and lower thoracic spine.

7/28/26 Radiation Oncology consult inpt- plan to start radiation

7/29/26 Oncology consult inpt- start Lupron 7.5mg, anastrozole 1mg daily, zometa 4mg

7/29/26 Palliative radiation to C4-T11 800cGy in Fx

8/14/26 Start Ribociclib 600mg, 3 wks on, 1 wk off

Secondary malignant neoplasm of bone (HCC)

PHYSICAL EXAMINATION:
Not completed today as visit TH.

Distant Site Telemedicine Encounter
I conducted this encounter via secure, live, face-to-face video conference with the patient. I reviewed the risks and benefits of telemedicine as pertinent to this visit and the patient agreed to proceed.

Provider Location: On-site location (clinic, hospital, on-site office)
Patient Location: At home
Present with patient: No one else present

I spent a total of 45 minutes for the patient's care on the date of the service.

Current Outpatient Medications:
• acetaminophen 325 MG tablet, Take 3 tablets by mouth every 8 hours., Disp: , Rfl:
• albuterol HFA 108 (90 Base) MCG/ACT inhaler, Inhale 2 puffs by mouth every 4 hours as needed for shortness of breath/ wheezing., Disp: , Rfl:
• anastrozole 1 MG tablet, Take 1 tablet by mouth daily., Disp: 30 tablet, Rfl: 11
• cholecalciferol 50 mcg (2,000 unit) capsule, Take 2 capsules by mouth daily., Disp: , Rfl:
• lidocaine viscous 2 % mouth/throat solution, Take 5 mL by mouth 4 times a day as needed (for throat pain). To avoid numbing tongue, use straw/applicator to apply to back of throat)., Disp: 200 mL, Rfl: 1
• methocarbamol 750 MG tablet, Take 1 tablet by mouth every 6 hours as needed for muscle spasms., Disp: 30 tablet, Rfl: 0
• morphine ER 15 MG ER tablet, Take 1 tablet by mouth every 8 hours. Take with a 30 mg tablet for a total of 45 mg every 8 hours, Disp: 42 tablet, Rfl: 0
• morphine ER 30 MG ER tablet, Take 1 tablet by mouth every 8 hours. Take with a 15 mg tablet for a total of 45 mg every 8 hours, Disp: 42 tablet, Rfl: 0
• naloxone 4 MG/0.1ML nasal spray, Use 1 spray in one nostril for suspected opioid overdose. Call 911. If unresponsive in 2 to 3 minutes, repeat with new naloxone nasal spray in opposite nostril., Disp: 2 each, Rfl: 0
• ondansetron 8 MG tablet, Take 1 tablet by mouth every 8 hours., Disp: 90 tablet, Rfl: 0
• oxyCODONE 10 MG tablet, Take 1-1.5 tablets by mouth every 3 hours as needed for moderate pain., Disp: 170 tablet, Rfl: 0
• pantoprazole 40 MG EC tablet, Take 1 tablet by mouth daily on an empty stomach., Disp: 20 tablet, Rfl: 0
• polyethylene glycol 3350 17 g packet, Take 1 packet by mouth daily. Dissolve in 4-8 ounce water., Disp: , Rfl:
• prochlorperazine 10 MG tablet, Take 1 tablet by mouth every 6 hours as needed for nausea/vomiting., Disp: 50 tablet, Rfl: 0
• propranolol 10 MG tablet, Take 1 tablet by mouth daily., Disp: , Rfl:
• ribociclib (600 mg dose) 200 MG tablet therapy pack, Take 3 tablets by mouth daily. Take on days 1 to 21 followed by 7 days off. Repeat every 28 days. Do not take first dose until directed by clinical team., Disp: 63 tablet, Rfl: 0
• senna 8.6 MG tablet, Take 2 tablets by mouth 2 times a day., Disp: 120 tablet, Rfl: 0
• tretinoin 0.025 % cream, Apply 1 application topically 3 times a week. Apply to face., Disp: , Rfl:

Oncology Oral Treatment Education Follow-up

Yvonne Kalley Franklin is a 47 year old female receiving follow-up assessment after start of therapy. This visit was conducted in person.

Treatment Follow-Up:
Oncology Regimen: Ribociclib 600mg D1-21/28
Start Date: 8/15/26

Patient Reported Side-Effects:
• Went to ED for N/V and migraine day after she started ribo, last week was taking ondansetron + compazine scheduled
• Tapering off her antiemetics, no issues with N/V since ED visit
• As of yesterday, stopped Zofran and now taking compazine 1x/day
• Taking with food has helped
• Dry mouth
• FHCC resource sent to her
• Harder to swallow big pills
• Hydrating 40-50oz per day, recommended to have extra glass of water w/ meals
• Fatigue and sedation
• Massive fatigue last week, subsiding, was to the point where she couldn't keep eyes open
• Dozing off on couch, taking other sedatives between morphine and oxycodone
• Feels like her energy has improved this last weekend

Patient satisfied with current management? Yes

Does this regimen contain oral chemotherapy? Yes

Oral Chemo Adherence Assessment:
1. Tell me how you are taking your medication(s)?: 3 tabs daily
2. How many times have you missed doses since starting your oral chemotherapy? 0
3. What should you do if you miss a dose?: Skipped missed dose, take within 6 hrs of missed dose
4. How do you remember to take your medication(s)?: Has an app and takes with other medications
5. How much supply did you receive? 1 month
6. How do you store your medication(s)?: In the kitchen, on the counter
7. What pharmacy is your next refill coming from? CVS Specialty

Provider Notification: N/A

Follow-Up Plan:
• Labs, EKG, and APP visit planned on Friday
• Will add on pharm phone visit on that date
• Had some questions about OTC supplements (magnesium, vitamin D and K2, etc.) - will send over labels via MCM

Patient Response: Aware of existing appointments, Aware of clinic contact information, States understanding of plan, Restates plan, States understanding of follow-up information, and No further questions

Time spent with patient: 20 minutes.

Distant Site Telemedicine Encounter
I conducted this encounter via secure, live, face-to-face video conference with the patient. I reviewed the risks and benefits of telemedicine as pertinent to this visit and the patient agreed to proceed.

Provider Location: On-site location (clinic, hospital, on-site office)
Patient Location: At home
Present with patient: No one else present

INTERVENTIONAL RADIOLOGY OUTPATIENT CONSULT NOTE

REFERRING PHYSICIAN
Amin Gautam, MD

IDENTIFICATION AND CHIEF COMPLAINT
Yvonne K Franklin is a 47 year old female patient who is referred to interventional radiology for consideration of treatment options for Vertebral Augmentation.

HISTORY OF PRESENT ILLNESS -The history is from the patient as well as from review of medical records.

Pt was recently admitted for pain control of significant metastatic disease. MRI demonstrates spinal metastases with several levels of compression fractures of varying acuity. No surgical intervention was indicated per NSGY, and patient was discharged following adequate pain control. She has received outpatient radiation therapy three weeks ago.

Since 3 weeks ago, her pain is significantly better in her neck. However, she is having significant pain with motion in the upper spine can get to an 8 or 9. She can't bend, turn, and she is limiting her motion, as well as limiting breathing.

She also has significant pain in the hip with bending and motion 9-10 though not a direct correlate with prior imaging.

PAST MEDICAL HISTORY

Active Ambulatory Problems

	Diagnosis	Date Noted
•	Secondary malignant neoplasm of bone (HCC)	07/22/2026
•	Neck pain	07/27/2026
•	Cancer related pain	07/27/2026
•	Breast cancer metastasized to bone, unspecified laterality (HCC)	07/27/2026
•	Acute bilateral thoracic back pain	07/28/2026

ASSESSMENT AND PLAN
Yvonne K Franklin is a 47 year old female with recently diagnosed metastatic breast cancer and extensive spinal metastases. Since receiving radiation therapy, she has improved in regards to her pain however has significant motion related pain up to 8-9/10 with compression fractures in her mid-upper back, likely correlating with T8. Diffuse metastases throughout the spine.

- Repeat CT T/L spine for planning, ideally
- Follow-up clinical and physical exam in a week with X-ray fiducial to confirm if only T8 area or if T3-T5 will need to be treated.
- At minimum T8 unipedicular kyphoplasty, biopsy, and ablation with general anesthesia
- She would be ok with participating in the research biobank (formal consent to be done)
- Other levels depending on physical exam.
- Hold AC as per guidelines.

MA telehealth rooming

1. Please provide the best number to reach you at in case we have technical difficulties today.
   Phone number: 360-201-2728

2. What city and state are you in currently?
Kirkland, WA

3) Are you currently admitted to a skilled nursing facility, inpatient rehab, or hospital?
   NO

4. Do you have anyone else with you who is joining this appointment?
   Yes,

Mark Franklin

5. Have you had any recent ED visits?
YES 8/16 UWMC ML vomiting and H/A

6. Patient must be present for this telehealth visit.
   YES

Electronically signed by Rae B at 08/21/2026 8:14 PM PDT

UWMC/FHCC Radiation Oncology Return Visit

Distant Site Telemedicine Encounter
I conducted this encounter via secure, live, face-to-face video conference with the patient. I reviewed the risks and benefits of telemedicine as pertinent to this visit and the patient agreed to proceed.

Provider Location: On-site location (clinic, hospital, on-site office)
Patient Location: At home
Present with patient: Partner

Patient summary

Yvonne Kalley Franklin is a 47 year old female with metastatic Lt breast cancer diffusely to bone with lesions along the entire spinal axis with diffuse T-spine pain (index lesions C4, C6, T1, T4, T5, T8 with compression fractures <25%). She presents for follow up visit.

No matching staging information was found for the patient.

Oncology History Overview Note

7/1/26: MRI T Spine
IMPRESSION:
Diffusely heterogeneous T1 hypointense and multifocal T2 hyperintense marrow signal including 2.3 x 2.3 cm expansile aneurysmal bone cyst like lesion in T5 vetebral body and similar lesions in T1, T8, T9, T10 and vertebral bodies, as well as 1.2 x 1.1 cm expansile T1 isointense, T2 hyperintense lesion in the posterior elements of T10.
Additionally there is a 1.8cm ovoid T2 hyperintense mass in the visualized posterior right liver lobe. While multiple aneurysmal bone cysts is a small possibility, the appearance is highly concerning for metastases from unknown primary. Recommend CT chest, abdomena nd pelvis with contrast or PET/CT for further evaluation.
Compression deformities of T1, T4, T5 and T8 vertebral bodies which may be pathologic.
Mild bilateral neural foraminal narrowing at T8-9 secondary to bony expansion.

7/13/26: CT Chest
IMPRESSION
* Multiple osseous lytic lesions, as described, concerning for a neoplastic process.
* Fracture of the left 11th rib.
* A few scattered nodules, measuring up to 4 mm. In the context of a potential primary malignancy, a follow-up CT of the chest in 3 months is advised.

7/13/26: CT A/P
IMPRESSION
Diffuse lytic bone lesions throughout the spine and pelvis without CT evidence of primary malignancy in the abdomen or pelvis. Small bilateral ovarian cysts would be better characterized on transvaginal ultrasound.

7/22/26 PET/MR: Lt breast lesion 3.3x2.4cm SUVmax 1.9 with Rt axillary node 9x8mm SUVmax 2.0. Innumerable bony foci including compression fractures of T4, T8, L5.

7/15/26 Dx imaging: ***Left*** Status post breast reduction. Left breast 9 mm x 7 mm x 11 mm mass at 1 o'clock with ill-defined heterogeneous tissue seen more medially. There is no definite mammographic correlate. Assessment: 4 - Suspicious finding. Left breast 7 mm x 4 mm x 7 mm oval circumscribed mass at 2 o'clock. Assessment: 3 - Probably benign Left breast normal-appearing intramammary lymph node at 2 o'clock. Assessment: 2 - Benign finding. ***Right*** Status post breast reduction. Right breast 13 mm x 8 mm x 15 mm simple cyst at 5 o'clock. Assessment: 2 - Benign finding. At least three morphologically abnormal right axillary lymph nodes. Assessment: 4 - Suspicious finding.

7/21/26 PET/CT:
Mild to moderately FDG-avid lesion in the left lateral breast, concerning for a primary breast neoplasm. No left axillary lymphadenopathy or abnormal FDG uptake within the left axillary lymph nodes. Moderately FDG-avid right axillary lymph node, suspicious for metastatic involvement.
Innumerable markedly intense FDG-avid osseous lesions throughout the axial and appendicular skeleton, with associated compression fractures involving several vertebral bodies, consistent with widespread metastatic disease. * Given the markedly greater extent and intensity of skeletal FDG uptake relative to the left breast lesion, along with the absence of ipsilateral axillary nodal involvement, the pattern of metastatic disease is atypical for a breast primary, and an alternative primary malignancy should be considered.
* Mild to moderately avid left lateral breast lesion, possible neoplastic involvement. No left axillary lymphadenopathy or abnormal FDG uptake within the lymph nodes. * Moderately avid right axillary lymph node, concerning for metastatic.* Innumerable foci of intense FDG uptake involving axial and appendicular skeleton, with compression fractures of few vertebrae, likely metastatic. The intensity of the FDG uptake in the bone metastatic disease in comparison to the breast lesion and negative left lymph node involvement make it less likely to be originaria from the breast.
7/22/26 Left breast bx 1:00 7N: ILC G2 ER (91-100%) PR (91-100%) Her2 (1+) Ki67 21-30%
Right axillary LN: Metastatic carcinoma, Neoplastic cells are morphologically similar to the findings in part A, compatible with metastasis from breast primary

7/24/26 Right iliac crest bx: metastatic carcinoma

7/27/26 CT Full spine * Extensive lytic osseous metastases involving multilevel vertebral bodies and posterior elements. Redemonstrated age-indeterminant mild pathologic fractures (<25% height loss) in the C4, C6, T1, T4, T5, T8, and L5 levels. Findings are grossly similar to the prior PET/MR. * No definite new evidence of significant vertebral fracture or subluxation. * Of note, there are some extra-osseous extension involving left C4/5, left C6/7, and right T8/9 foraminal canals, and S1, S2/3 anterior epidural extension, resulting in spinal canal narrowing as described. Findings are similar to the 07/13/2026 abdominal CT. Consider MRI for evaluation of epidural/foraminal canal involvement if clinically warranted.* Of note, the left C4 and C6 lateral process involvement may involve the left V2 vertebral artery. Consider neck CTA to evaluate luminal patency if clinically warranted.

7/27/26 CT head/neck: Normal head CT. No acute infarct, hemorrhage or mass effect. Normal CTA head. No high-grade stenosis or occlusion. Normal CTA of the neck vessels. No stenosis, dissection or occlusion. Internal carotid artery origin stenosis by NASCET criteria: No significant stenosis by NASCET criteria
7/27/26 MRI Spine: No cord compression. Anterior epidural tumor extension at T5 and T8 levels
Diffuse osseous metastasis multiple cervical, thoracic and lumbar vertebral bodies. Pathologic fractures involving T4, T5 and T8 vertebral bodies with mild height loss at T5 (40%).

7/28/26 XR T spine: On the standing AP, lateral, and swimmer's views, skin metallic markers are noted at apparent levels of pain centered at the T1/2 level and the upper T7 level. The multiple lytic lesions throughout the thoracic spine are better visualized on the prior day CT but grossly stable again consistent with bony metastases without definite evidence of gross pathologic fracture. Again there is essential anatomic alignment on the lateral and frontal views. There are mild degenerative disc changes in the mid and lower thoracic spine.

7/28/26 Radiation Oncology consult inpt- plan to start radiation

Pain
Pain Location: Back, neck, ribs (8/14/2026 10:13 AM)
Pain Score: 8 - Severe (8/16/2026 4:06 PM)

Safety and Mobility
Have you fallen in the past year?: No (8/20/2026 1:36 PM)

Interval history

Today, Ms. Franklin is accompanied by her husband. She reports improvement in the back and neck pain after radiation. She then had bilateral rib pain and was seen in the ACE clinic and had a CT chest done. Her systemic medication was expedited and she started a CDK 4/6 inhibitor 7 days ago. Since then the rib pain has significantly subsided.

Her main area of concern now is above the right buttocks. She says that prior to radiation, she had sharp pain which went away. But now she has stiffness and pain when bending over or walking. No numbness or weakness of her legs.

She takes morphine 45mg TID and oxycodone PRN (she has used 1 tablet every 5 hours the past 2 days, previously every 3 hours). Managed by Dr. Symonds' team.

Wt Readings from Last 9 Encounters:	
08/14/26	56.7 kg (125 lb)

Imaging and pathology
Reviewed in HPI

CT Head wo Contrast
Narrative: EXAMINATION:
CT HEAD W/O CONTRAST

CLINICAL INDICATION:
headache, hx breast cancer

TECHNIQUE:
5 mm MDCT images from skull base to vertex without contrast. Patient age specific parameters were used for radiation exposure.

COMPARISON:
CT head 7/27/2026

FINDINGS:
MASS EFFECT & VENTRICLES: No shift. The lateral ventricles are symmetric. The ventricles, sulci and cisterns are normal.
BRAIN: The brain parenchyma is normal. No acute infarct, hemorrhage or mass lesion is seen.
VASCULAR: Cavernous carotids and vertebral vessels are normal.
EXTRA-AXIAL: Extra-axial spaces are normal.
EXTRA-CRANIAL: Skull and facial bones are normal. Right maxillary sinus mucous retention cyst, otherwise the sinuses and mastoids are clear. Orbits are normal.
Impression: 1. No acute intracranial abnormality.

This is an afterhours preliminary report generated by Sina Hosseinian, PGY-3. Unless an attending attestation appears below, the report has not yet been finalized and an attending radiologist has not reviewed these images.

ATTENDING FINAL REVIEW

I agree with the preliminary report with the following comment:

Osseous lytic lesion in the left mandibular condyle with cortical breakthrough posteriorly (302/9, 10).

I have personally reviewed the images and agree with the report (or as edited).

	A) Right iliac crest, biopsy: - Metastatic carcinoma.	

Assessment
Yvonne Kalley Franklin is an 47 year old with metastatic Lt breast cancer diffusely to bone with lesions along the entire spinal axis with diffuse T-spine pain (index lesions C4, C6, T1, T4, T5, T8 with compression fractures <25%).

She has responded well to radiation with improvement in pain of her back and neck. We discussed that the source of her bilateral rib pain is still unclear but we are glad that her pain has improved while on systemic therapy.

The source of the right buttocks pain is also unclear as her prior imaging does not show one dominant lesion that we can confidently attribute as the cause that can be targeted with radiation. She has had significant improvement in her pain and has been able to reduce her need for breakthrough oxycodone very quickly after starting her systemic therapy so we are hopeful she will continue to have improved response. We are in agreement to continue monitoring and defer radiation. She knows how to contact us should her pain worsen and we can re-evaluate the role of radiation.

Plan
Return to clinic as needed.

All questions were addressed. The patient agrees with the recommended plan.

Felicia Lew, MD, DVM
Radiation Oncology Resident Physician, PGY-4

ATTENDING ATTESTATION:
I examined and evaluated the patient and agree with Dr. Lew's history, exam, and plan of care. I have made minor edits.

She will see IR Dr. Som on 8/21/26 for evaluation of spine stabilization.

Her Rt supra-buttock pain resolving prior to any initiation of therapy and now returning as a dull pain makes me suspect musculoskeletal etiology.

I spent a total of 30 minutes for the patient's care on the date of the service independent from other healthcare team members. This time encompasses review of records, personal review of imaging, face-to-face discussion with patient, placing orders/referrals, care coordination, and documentation. I provided longitudinal care for complex and serious medical problems.

Past Medical History:

Diagnosis	Date	
•	Breast cyst	Always

Current Outpatient Medications:
• acetaminophen 325 MG tablet, Take 3 tablets by mouth every 8 hours., Disp: , Rfl:
• albuterol HFA 108 (90 Base) MCG/ACT inhaler, Inhale 2 puffs by mouth every 4 hours as needed for shortness of breath/ wheezing., Disp: , Rfl:
• anastrozole 1 MG tablet, Take 1 tablet by mouth daily., Disp: 30 tablet, Rfl: 0
• cholecalciferol 50 mcg (2,000 unit) capsule, Take 2 capsules by mouth daily., Disp: , Rfl:
• lidocaine viscous 2 % mouth/throat solution, Take 5 mL by mouth 4 times a day as needed (for throat pain). To avoid numbing tongue, use straw/applicator to apply to back of throat)., Disp: 200 mL, Rfl: 1
• methocarbamol 750 MG tablet, Take 1 tablet by mouth every 6 hours as needed for muscle spasms., Disp: 30 tablet, Rfl: 0
• metoclopramide 5 MG tablet, Take 1 tablet by mouth 2 times a day as needed for nausea/vomiting for up to 7 days., Disp: 14 tablet, Rfl: 0
• morphine ER 15 MG ER tablet, Take 1 tablet by mouth every 8 hours. Take with a 30 mg tablet for a total of 45 mg every 8 hours, Disp: 42 tablet, Rfl: 0
• morphine ER 30 MG ER tablet, Take 1 tablet by mouth every 8 hours. Take with a 15 mg tablet for a total of 45 mg every 8 hours, Disp: 42 tablet, Rfl: 0
• naloxone 4 MG/0.1ML nasal spray, Use 1 spray in one nostril for suspected opioid overdose. Call 911. If unresponsive in 2 to 3 minutes, repeat with new naloxone nasal spray in opposite nostril., Disp: 2 each, Rfl: 0
• ondansetron 8 MG tablet, Take 1 tablet by mouth every 8 hours., Disp: 90 tablet, Rfl: 0
• oxyCODONE 10 MG tablet, Take 1-1.5 tablets by mouth every 3 hours as needed for moderate pain., Disp: 170 tablet, Rfl: 0
• pantoprazole 40 MG EC tablet, Take 1 tablet by mouth daily on an empty stomach., Disp: 20 tablet, Rfl: 0
• polyethylene glycol 3350 17 g packet, Take 1 packet by mouth daily. Dissolve in 4-8 ounce water., Disp: , Rfl:
• prochlorperazine 10 MG tablet, Take 1 tablet by mouth every 6 hours as needed for nausea/vomiting., Disp: 50 tablet, Rfl: 0
• propranolol 10 MG tablet, Take 1 tablet by mouth daily., Disp: , Rfl:
• ribociclib (600 mg dose) 200 MG tablet therapy pack, Take 3 tablets by mouth daily. Take on days 1 to 21 followed by 7 days off. Repeat every 28 days. Do not take first dose until directed by clinical team., Disp: 63 tablet, Rfl: 0
• senna 8.6 MG tablet, Take 2 tablets by mouth 2 times a day., Disp: 120 tablet, Rfl: 0
• tretinoin 0.025 % cream, Apply 1 application topically 3 times a week. Apply to face., Disp: , Rfl:

Miscellaneous Notes - documented in this encounter

Telephone Encounter - Megan D - 08/17/2026 12:30 PM PDT

Formatting of this note might be different from the original.

Return call from Yvonne. She went to the ED yesterday after terrible nausea/vomiting at home and migraine HA. She spoke with the after hours team, who advised she present to ED. They did an EKG and CT of her head, as well as a urine sample d/t concern for UTI. She was ultimately considered safe for discharge.

We discussed that nausea could be a SE from Ribo. She is now proactively taking both Zofran and Compazine scheduled, rather than waiting until she feels nauseous. Today she feels that this has been helpful for controlling nausea. She has not vomited today. Mild HA is still present but much better. There may be a component of dehydration, so she is trying to push fluids today.

Yvonne notes feeling very fatigued on Saturday and Sunday, struggling to keep her eyes open through the day. She is trying to stay active but notes dosing off at times. She knows narcotics may be part of this. We reviewed that narcotics combined with Ribo may be causing increased fatigue and hope that this will improve with time. Briefly discussed dose reductions and Yvonne agreed to reach out to team if fatigue or other SE do not improve or become unmanageable.

Electronically signed by Megan D at 08/17/2026 12:44 PM PDT

Discharge Instructions

Mia Mohabir - 08/16/2026 11:12 PM PDT

Formatting of this note might be different from the original.

You were seen in the emergency department for nausea and vomiting
You also had a headache but had a negative CT head which was reassuring against having a stroke
Your symptoms improved with the migraine cocktail which consists of Reglan and Tylenol. We also gave you IV fluids. Your urine was reassuring against UTI
Please follow-up with your Fred Hutch outpatient team in 1 week. Please consider repeat urinalysis to ensure that the blood resolves
If you feel palpitations, please consider asking her primary care provider for patch monitor
Please take your new prescription of Reglan twice per day as needed for nausea

Electronically signed by Mia Mohabir at 08/16/2026 11:14 PM PDT

CHIEF COMPLAINT

Chief Complaint	
Patient presents with	
•	Headache
•	Vomiting

HISTORY OF PRESENT ILLNESS AND REVIEW OF SYSTEMS

?

Patient is a 47 year old with a past medical history of breast cancer with bone metastases on oral chemotherapy started two days ago who presents with two days of nausea and headache since this morning.

Yesterday morning, patient had her first dose of oral chemotherapy. Later that evening, she started to feel little nauseous and fatigued. This morning, she slept until 10 AM which is highly unusual for her. When she woke up, she felt severe headache that feels similar to her chronic migraines she used to take sumatriptan for. She also felt severe nausea today that did not resolve with her normal home doses of ondansetron or Compazine. Her nausea today worsened after she took her dose of oral chemotherapy today. She messaged with her care team at Fred Hutch cancer center and was recommended to go to the emergency department given severe headache.

She has chronic photophobia and noted some ringing in her ears yesterday that has since resolved. She still has some sore throat after her chemotherapy 3 weeks ago.

She declines change in vision, nasal congestion, cough, chest pain, palpitations, shortness of breath, abdominal pain, hematuria, dysuria, urinary frequency, leg pain, leg swelling, skin change or rash. No change in gait, unilateral numbness or weakness.

Chart review:
Nurse coordination at FHCC: pt called with severe nausea after taking first dose of Ribociclib yesterday. Took ondansetron and compazine with little relief. Started having severe headache this morning with dizziness.
Was advised not to take an additional dose of Ribociclib if she misses a dose, continue to take routine doses thereafter. Was recommended to go to the ER for further evaluation of headache by Iversen PA-C.

7/27/26 CT head and neck angio:
IMPRESSION
1. Normal head CT. No acute infarct, hemorrhage or mass effect.
2. Normal CTA head. No high-grade stenosis or occlusion.
3. Normal CTA of the neck vessels. No stenosis, dissection or occlusion.
Internal carotid artery origin stenosis by NASCET criteria: No significant stenosis by NASCET criteria.
ATTENDING COMMENT:
I agree with the preliminary report with the following comments:
Mucous retention cysts in the bilateral maxillary sinuses.
Fetal origin of the left PCA.
Common origin of the left common carotid and right brachiocephalic arteries from the aortic arch.

ED COURSE/MEDICAL DECISION MAKING

?
Patient is a 47 year old with a past medical history of breast cancer with bone metastases on oral chemotherapy started two days ago who presents with two days of nausea and headache since this morning.

Patient interview was notable for her headache feeling similar to her chronic migraines without any unilateral numbness or weakness. Vital signs were unremarkable. Physical exam was notable for an irregular heart rate and left CVA tenderness.

Differential includes chemotherapy side effects, chronic migraine, pyelonephritis, arrhythmia. Will order labs such as CBC, CMP, urinalysis to assess for infection or electrolyte abnormalities as well as EKG to assess for arrhythmia. Will treat pain and nausea with migraine cocktail.

ED Course as of 08/16/26 2217	
Sun Aug 16, 2026	
1909	Supervising resident addendum: 21M hx breast ca w mets to bone presenting with headache x1d, nausea x2 days after starting chemo. Headache similar in character to prior migraines. Will plan for labs, CT, migraine cocktail [AH]
2053	EKG NSR [AM]
2055	CBC shows anemia that is persistent with levels over the last 2 weeks [AM]
2055	**Hemoglobin(!): 11.1** [AM]
2055	**Hematocrit(!): 34** [AM]
2055	**RBC(!): 3.72** [AM]
2153	CT head normal. Will discuss with attending about discharge [AM]

2217	Pt providing urine sample now. Order placed [AM]
ED Course User Index [AH] Hecht, Abigail, MD [AM] Mohabir, Amelia Mae, MD	

Medications Given in the ED:

Medications
lactated ringers IV Bolus 1,000 mL (has no administration in time range)
acetaminophen (Tylenol) tablet 975 mg (has no administration in time range)
metoclopramide (Reglan) injection 10 mg (has no administration in time range)

CT SCAN HEAD W/O CONTRAST (CT HEAD W/O CONTRAST) - Final result (08/16/2026 7:39 PM PDT)

Anatomical Region	Laterality	Modality
Head	N/A	Computed Tomography

Specimen (Source)	Anatomical Location / Laterality	Collection Method / Volume	Collection Time	Received Time
			08/16/2026 8:08 PM PDT	

Impressions

08/16/2026 9:14 PM PDT

1. No acute intracranial abnormality.

This is an afterhours preliminary report generated by Sina Hosseinian, PGY-3. Unless an attending attestation appears below, the report has not yet been finalized and an attending radiologist has not reviewed these images.

ATTENDING FINAL REVIEW

I agree with the preliminary report with the following comment:

Osseous lytic lesion in the left mandibular condyle with cortical breakthrough posteriorly (302/9, 10).

I have personally reviewed the images and agree with the report (or as edited).

Narrative

08/16/2026 9:14 PM PDT

This result has an attachment that is not available.

EXAMINATION:
CT HEAD W/O CONTRAST

CLINICAL INDICATION:
headache, hx breast cancer

TECHNIQUE:
5 mm MDCT images from skull base to vertex without contrast. Patient age specific parameters were used for radiation exposure.

COMPARISON:
CT head 7/27/2026

FINDINGS:
MASS EFFECT & VENTRICLES: No shift. The lateral ventricles are symmetric. The ventricles, sulci and cisterns are normal.
BRAIN: The brain parenchyma is normal. No acute infarct, hemorrhage or mass lesion is seen.
VASCULAR: Cavernous carotids and vertebral vessels are normal.
EXTRA-AXIAL: Extra-axial spaces are normal.
EXTRA-CRANIAL: Skull and facial bones are normal. Right maxillary sinus mucous retention cyst, otherwise the sinuses and mastoids are clear. Orbits are normal.

Procedure Note

Heba Fouad - 08/16/2026

Miscellaneous Notes - documented in this encounter

Telephone Encounter - Kaci E - 08/17/2026 12:06 PM PDT

Formatting of this note might be different from the original.

Called and LVM for patient to check in on her after ED visit yesterday. Asked for return call, MCM sent as well.

Electronically signed by Kaci E at 08/17/2026 12:08 PM PDT

Telephone Encounter - Isabelle N - 08/16/2026 1:45 PM PDT

Formatting of this note might be different from the original.

Oncology Telephone Triage Note

Subjective / Visit Information:

Reason for Call: Triage (Uncontrolled Nausea after first dose Ribociclib)

Assessment and Plan:

Call Summary: Pt calling in to report uncontrolled nausea and dry heaving. Breast pt that took her first dose of Ribociclib yesterday. Took ondansetron at 1030 and compazine at 1130 with little relief. Only able to sip minimally on fluids. Has had a 8/10 HA this AM that pt describes as "pressure behind my eyes" and is dizzy. Does confirm light sensitivity however this is unchanged from pt's baseline. No abdominal pain, bloating, or cramping. Constipated (baseline but is on senna and miralax as she has been on opioids for pain management) with last BM yesterday. Was actively dry heaving when she was on the call. Pt was also wondering what she should do if she vomits soon after she takes her next dose of Ribociclib (She has not taken her dose for today).

Upon calling pt back for further assessment, pt stated she did vomit (approximately 1330) which improved her nausea slightly. Still reporting 8/10 HA - confirms she does have migraines occasionally without aura or NV, however she has not had one in the past week. States she takes Excedrin and another prescription she unsure of (not in medication list) for migraines but has not taken it today as she has not had a migraine recently.

Action Taken: Provider Notified

Per ONS/HOPA, pt informed to NOT take an additional dose of Ribociclib if she misses a dose/vomits her dose and instructs pt to take the routine dose the next day. Iversen PA-C responded and recommended pt to go to ED for further evaluation of HA as we are unable to see pt today. Message relayed to pt. This RN provided report to UWMC Montlake triage RN.

Response: Aware of clinic contact information, States understanding of plan, Restates plan, and No further questions

Additional documentation may exist in Flowsheets or Education Activity

Progress Notes - documented in this encounter

Megan D - 08/14/2026 12:00 PM PDT

Formatting of this note might be different from the original.

Oral Treatment Education Initial

Yvonne Kalley Franklin is a 47 year old female receiving education prior to the start of therapy. This visit was conducted in person. Pt's brother was present for visit

Treatment Regimen/Clinical Trials Protocol: **Ribociclib**

Education Assessment
Learner(s): **Patient and Family**
Readiness: **Acceptance**
Method: **Literature and Explanation**
Barriers: **None**

Medication Education
Planned Start Date: **8/14/2026**
Education has been provided and understanding was confirmed on the following topics: **Indications and goals of treatment, When and how to call care team/emergency services, Start date, administration schedule, and duration of therapy, Contraindications (e.g., avoiding pregnancy), Common and high-risk side effects, Side effect prevention and management (e.g., pre-meds, supportive care meds), Reporting new or changed medications or supplements, Medication storage and disposal, Missed dose management, Safe handling of medication and Safe handling of bodily fluids**
Additional education topics discussed: **Reproductive risks and protection, Management of unused medication, Food and drug interactions and Supportive care resources**
Medication-Specific Written material provided: **Fred Hutch-created and ONS/HOPA**
Additional Written material provided: **Clinic contact information and Symptom sheet(s)**
Post Education Response: **Teach back - restates info with assist**
Time Spent: **60 minutes**
?
Nurse Education Visit for Zoledronic Acid (Zometa) Education
Treatment Education:
Planned Start Date: Pt received first dose while inpt. First dose at FHCC planned for 8/28
• Medication Schedule: Every 4 weeks
• Action: Strengthens bones by reducing the amount of calcium released from your bones. Can be used to treat or prevent bone metastasis.
• Need dental check before start and let team know if planning on any invasive dental work

Common Side Effects:
• Flu like symptoms typically with first infusion
• Mild nausea
• Fatigue
• Constipation
• Can affect your Cr (kidney function)

Rare but Serious Side Effect: Damage to bone tissue in the jaw

How to Manage the Side Effects:
• 2 liters of fluids day before, day of and day after infusion help flush your kidneys and reduce flu like symptoms.
• Take calcium and Vit D supplements per provider recommendation
• Let us know if experiencing flu-like symptoms and we can help you manage the symptoms
• Acetaminophen (if approved by provider) after administration may reduce the incidence of acute reaction (eg, arthralgia, fever, flu-like symptoms, myalgia)

Let provider know before having any dental procedures, including tooth removal

Nurse Education Visit for Lupron
This visit was conducted in person. Pt's brother was present for visit.

Medication Information Discussed:
- Medication administration and schedule: IM injection every 4 weeks
- Action: Suppress estrogen production by the ovaries.
- Handouts provided: Lupron regimen sheet, Ovarian Suppression Therapy with Lupron handout and Menopause Without Hormones handout.

We discussed common side effects including hot flashes, changes in metabolism, headache, joint/muscle pain, fatigue, mood changes, decreased libido, vaginal dryness, and decreased bone density. We also discussed the rare but serious side effect of changes in cardiac function. We discussed side effect management and when to contact the team (contact information provided), as well as when to present to the emergency room. All questions were answered.

Patient Response: Aware of existing appointments, Aware of clinic contact information, States understanding of plan, and No further questions

Patient Response: Aware of existing appointments, Aware of clinic contact information, States understanding of plan, and No further questions

RN follow up:
• Awaiting scheduling for Oncology Nutrition Visit
• Referral placed to Integrative Medicine
• Plan to discuss potential for EGD with dilation with provider team.

Electronically signed by Megan D at 08/14/2026 2:22 PM PDT

FRED HUTCHINSON CANCER CENTER
BREAST ONCOLOGY NEW PATIENT VISIT

Use of Ambient Listening:
Was ambient listening technology used during this visit and was verbal consent for recording obtained? **Yes, used in visit. Consent was obtained.**
?

ID/CC: 47-year-old premenopausal woman with de novo metastatic ER+/PR+, HER2-negative breast cancer with predominantly osseous metastatic disease, who presents today for initiation of ribociclib.

ONCOLOGY HISTORY:
-February 2026: Developed back pain which got progressively worse
-7/1/26: MRI spine showed expansile lesions in T1, T5, T8-T10 with expansile element in T10
-7/13/26: CT chest/abdomen/pelvis showed diffuse bony lesions throughout spine and pelvis and left 11th rib fracture as well as a few scattered lung nodules.
-7/21/26: PET-CT w FDG lesions in L breast, R axilla, FDG avid osseous lesions, compression fracture.
-7/22/26: L breast core biopsy showed invasive lobular carcinoma, ER+ (91-100%), PR+ (91-100%), HER2- (1+ by IHC), Ki-67 21-30% , Right axilla LN biopsy showed metastatic carcinoma
-7/24/26: Right iliac crest biopsy showed metastatic carcinoma
-7/27/26-7/30/26: Admitted for pain control, she received palliative radiation with 800 cGy over 1 fraction to the right hip joint, started on lupron and anastrozole, also received zometa as an inpatient
8/15/26: Start Ribociclib

HPI: Please see detailed oncology history above. We spent the majority of the visit reviewing the diagnosis and discussing treatment recommendations. Please see details in the assessment and plan.

History of Present Illness
Yvonne Kalley Franklin is a 47-year-old premenopausal woman with de novo metastatic ER+/PR+, HER2-negative breast cancer with predominantly osseous metastatic disease, currently on leuprolide and anastrozole with zoledronic acid, who presents for follow-up and initiation of ribociclib.

Since her last visit, she was evaluated in the ACE clinic on 8/12/26 for worsening rib pain, L>R. Her pain regimen was recently increased to morphine ER 45 mg every 8 hours with oxycodone 15 mg every 3 hours PRN. She reports improved pain control with the adjusted regimen and has been able to extend the interval between oxycodone doses, although she continues to have persistent pain involving the neck, upper back, and ribs, exacerbated by movement, deep inspiration, and coughing. She feels the pain remains suboptimally controlled and describes it as gradually "spreading." She notes some drowsiness related to her analgesics and continues to have constipation despite supportive measures, as well as chronic bloating.

She otherwise reports intermittent sore throat/odynophagia and uses topical anesthetic as needed with oral intake. She denies new lymphadenopathy, headaches, vision changes, new abdominal pain aside from rib-related discomfort, new lower-extremity bone pain, numbness/tingling, or abnormal bleeding.

She also notes bilateral breast soreness/fullness, more prominent on the left near the site of her prior biopsy, with associated tenderness and discomfort when wearing a bra. She has not appreciated any other new breast changes.

ROS: Complete ROS was reviewed and was negative unless stated above in the HPI

ECOG: 0 (prior to diagnosis)

PMH
Medical History

Gynecology History:
Menopausal Status: premenopausal
HRT use: Denies
OCP use: Yes, from 18-33 then had IUDs (IUD recently removed)

•	tretinoin 0.025 % cream	Apply 1 application topically 3 times a week. Apply to face.		

No facility-administered medications prior to visit.

ALLERGIES
Review of patient's allergies indicates:

Allergies

Allergen	Reactions	
•	Propofol	Palpitations and Other
		PVC's *Palpitation*
•	Fentanyl	Other
		Isolated PVCs

SOCIAL HISTORY: Accompanied today by her husband. She has two children ages 9 and 11.
EtOH:She drinks 1-2 drinks alcohol on a few to most nights of the week.
Tobacco: Never smoker
Recreational Drugs: Denies

FAMILY HISTORY
Family History

PHYSICAL EXAM

Vitals:	
	08/14/26 1013
BP:	124/85
Pulse:	88
Resp:	14
SpO2:	97%

PHYSICAL EXAM:
Constitutional: Looks well, no acute distress
HEENT: Normocephalic, atraumatic. PERRL, EOM intact, sclera anicteric. Tenderness over posterior neck.
Lymph nodes: No cervical or axillary lymphadenopathy
Breast: Left breast with a palpable ~1 cm mass and generalized lumpiness extending from the upper outer to lower outer quadrant, nontender. No overlying skin changes. Nipple everted without discharge or other abnormality. Right breast without palpable masses or skin changes. Nipple everted without discharge or other abnormality.
Cardiovascular: Regular rate and rhythm with no murmurs
Respiratory: Lung fields clear to auscultation bilaterally. Tenderness over the posterior ribcage and the bilateral costal margins.
Abdomen: Soft, non-distended, non-tender, normoactive bowel sounds
Extremities: No edema BLE, normal ROM
Skin: Warm and dry
Neurologic: Alert and oriented x3
Psychiatric: Negative

IMAGING
Imaging was reviewed and summarized above in the oncology history

PATHOLOGY

Left Breast Core biopsy and Right axillary lymph node 7/22/26 (copied from report)
A) Left breast, 1:00 7 cm FN, core biopsy:
- Invasive lobular carcinoma. See Synoptic Checklist.

B) Lymph node, right axilla, core biopsy:
- Metastatic carcinoma, See Comment.

COMMENT:
B) Neoplastic cells are morphologically similar to the findings in part A, compatible with metastasis from breast primary.

TUMOR	
Tumor Site	Clock position
	1 o'clock
Tumor Site	Distance from nipple (Centimeters): 7 cm
Histologic Type	Invasive carcinoma with features of: lobular
Histologic Grade (Nottingham Histologic Score)	
Glandular (Acinar) / Tubular Differentiation	Score 3
Nuclear Pleomorphism	Score 2
Mitotic Rate	Score 1
Overall Grade	Grade 2 (scores of 6 or 7)
Largest Invasive Focus in this Limited Biopsy Sample	7 mm
Ductal Carcinoma In Situ (DCIS)	Not identified
Lymphatic and / or Vascular Invasion	Not identified
Microcalcifications	Not identified
Breast Biomarker Studies (pending)	Biomarkers have been ordered and will be reported in an addendum.

Testing Performed on Specimen / Block Number(s)	A1
Test(s) Performed	
Estrogen Receptor (ER) Status	Positive (greater than 10% of cells demonstrate nuclear positivity)
Percentage of Cells with Nuclear Positivity	91-100%
Average Intensity of Staining	Strong (3+)
Test(s) Performed	
Progesterone Receptor (PgR) Status	Positive
Percentage of Cells with Nuclear Positivity	91-100%
Average Intensity of Staining	Strong (3+)
Test(s) Performed	
HER2 by Immunohistochemistry (IHC) Status	Negative (Score 1+)
	Incomplete membrane staining that is faint / barely perceptible and in greater than 10% of tumor cells
Test(s) Performed	
Ki-67 Proliferative Index	21-30%

ASSESSMENT/PLAN: 47-year-old premenopausal woman with de novo metastatic ER+/PR+, HER2-negative breast cancer with predominantly osseous metastatic disease, who presents today for initiation of ribociclib.

#Breast Cancer: Patient presented with several months of back pain. An MRI on 7/1/26 showed expansile lesions in T1, T5, T8-T10. Subsequent CT chest/abdomen/pelvis on 7/13/26 showed diffuse bony lesions throughout the spine and pelvis and left 11th rib fracture as well as a few scattered lung nodules. PET CT on 7/21/26 showed FDG avid lesions in L breast, R axilla, and bones. Left breast core biopsy on 7/22/26 showed invasive lobular carcinoma, ER+ (91-100%), PR+ (91-100%), HER2- (1+ by IHC), Ki-67 21-30%. Right axillary LN biopsy showed metastatic carcinoma. Right iliac crest biopsy also showed metastatic carcinoma. She was subsequently admitted for pain control and started on lupron + anastrozole. As previously discussed, this presentation is consistent with metastatic/stage IV breast cancer and recommendation is for AI + CDK4/6 inhibitor as first-line systemic therapy. Given the side effect profile, decision was made to proceed with ribociclib. She presents today for initiation of ribociclib. Labs are adequate to proceed. We reviewed potential side effects of ribociclib including neutropenia/decreased blood counts, LFT changes, fatigue, QTc prolongation, and rare pneumonitis.
- Reviewed baseline EKG, QTc <450 ms.
- Start ribociclib 600 mg PO daily D1-21 of a 28-day cycle.
- Continue lupron q4 weeks.
- Continue anastrozole daily.
- Repeat labs and EKG in 2 weeks.
- Repeat CT Cap and PET/CT on 11/13/2026.
- Referrals placed for Nutrition, SW, and Child Life.
- Will send next-generation sequencing on tumor sample.
- Continue follow-up with Palliative Care.

#Pain management: Persistent cancer-related pain involving the neck, upper back, and ribs in the setting of extensive osseous metastatic disease. She was recently evaluated in ACE clinic for worsening rib pain. Since adjustment of her pain regimen, she reports improved pain control and has been able to extend the interval between breakthrough oxycodone doses, though pain remains present.
- S/p palliative RT.
- Continue MS Contin 45 mg every 8 hours.
- Continue oxycodone 15 mg every 3 hours PRN breakthrough pain.
- Continue Tylenol PRN.
- Continue supportive medications as directed by Palliative Care.
- Recommend daily bowel regimen given opioid-induced constipation.
- Continue follow-up with Palliative Care for ongoing symptom management.

#Bone Mets: We previously discussed the data supporting the use of bisphosphonates in patients with bone metastases to prevent skeletal-related events and decrease pain. The risk of ONJ and atypical femur fractures is low at the doses/frequency used in this setting. Common side effects include arthralgias and transient flu-like symptoms following infusion.
- Continue Zometa q4 weeks.

#Radiation-associated odynophagia: Reports intermittent sore throat/discomfort with swallowing following recent radiation, currently manageable with supportive measures.
- Continue topical lidocaine/throat spray PRN.
- Encourage hydration.
- Monitor for worsening dysphagia/odynophagia or decreased PO intake.

#Genetics: Genetic testing recommended in the setting of metastatic breast cancer.

Disposition: RTC 2 weeks after starting of ribociclib for review labs, EKG and provider visit.
Advised to contact the clinic with any questions or concerns in the interim.

To patients reading this note: Please be advised that the primary purpose of this note is for me to communicate other members of your medical team. Standard sentence structure is not always used. Medical terminology, abbreviations and acronyms may be used that are unfamiliar.

FHCC PALLIATIVE CARE NOTE

VISIT INFORMATION:
Date of Service: 8/14/2026
Type of Visit: Phone Call Visit
Referral Reason: Cancer-related pain, Symptom management (non-pain), and Emotional support/coping

ID/CC: 47 year old female with de novo metastatic breast cancer with osseous metastases. Diagnosed 07/2026. Admission 7/27/26 for pain. Currently on Lupron and anastrozole. Awaiting start of ribociclib. ACE visit 8/12/26 for increased pain.

Use of Ambient Listening:
Was ambient listening technology used during this visit and was verbal consent for recording obtained? **Yes, used in visit. Consent was obtained.**
?

Treatment goal	[No plan goal]
Plan Name	OP Ribociclib + Endocrine Therapy
Start Date	8/15/2026 (Planned)
End Date	11/7/2026 (Planned)

Addressed during this visit: Patient's narrative, Symptom management, Optimizing quality of life, and Education about palliative care
Participants: Patient and Spouse: Mark

History of Present Illness
Yvonne Kalley Franklin is a 47 year old female with metastatic stage IV invasive lobular breast cancer with osseous metastases who presents today for follow up phone visit.

Pain control has been variable. Rib pain is most bothersome, worsened by movement and breathing. Back pain is also present and responds better to opioids. Since increasing morphine ER to 45 mg three times daily, overall pain control has improved, with longer breakthrough relief and occasional ability to go up to 4 hours between oxycodone doses rather than needing redosing around 2-3 hours. Breakthrough opioid is oxycodone 15 mg per dose; she has not increased to 20 mg. She was seen in the ACE clinic on Wednesday 8/12/26 for marked rib pain and had a CT scan given known rib lesions and a change in pain.

She is starting ribociclib today 8/14/26. Radiation oncology follow-up is scheduled next week. After speaking with Dr. Simons' nurse on 8/13/26, she understands that radiation to the ribs is unlikely to be pursued, but she plans to keep the appointment.

Bowel movements over the last week have generally been once daily or every other day, with multiple bowel movements yesterday. Stools have been soft and pasty rather than formed, which is atypical. Marked bloating persists with a sensation of incomplete evacuation even after a seemingly adequate bowel movement.

Oral intake is limited by poor appetite and difficulty tolerating heavier foods; she is managing smaller, softer meals such as soups, smoothies, avocado toast with egg, and yogurt with fruit. Nausea has been variable. Prochlorperazine is being used; ondansetron has not been taken. A strong wave of nausea occurred last night with near-emesis but no vomiting, and symptoms have otherwise been fairly controlled.

Goals of Care
She described the past weeks as a roller coaster and expressed hope that starting ribociclib today will be a major turning point for symptom control, describing it as promising and sharing high hopes. I shared my hope that cancer-directed therapy may improve pain and related symptoms, while also setting expectations that response can vary and may take several weeks to months even if some people notice earlier improvement.

She shared that Mark is helping her stay on top of eating and that she is focusing on protein and calories with smaller, softer meals. She described Child Life support as very helpful and reported that she and Mark talked with their children about the cancer this week, which felt emotionally relieving despite being hard, and she anticipates more questions from their daughter.

We discussed barriers related to opioid access and pharmacy and insurance processes. She and Mark voiced worry about running out early if dosing changes and described a recent distressing interaction with a pharmacist when attempting to fill an adjusted prescription, which left her feeling stigmatized. I reviewed how dose changes require updated prescription instructions for pharmacy and insurance coverage, encouraged her to notify my team if she needs more frequent or higher breakthrough dosing, and emphasized contacting us rather than independently changing long-acting morphine.

Assessment & Plan

Cancer pain management
Cancer-related pain improved with morphine ER and less frequent oxycodone use, but persistent rib pain remains. Ribociclib initiated with expected symptom improvement. Radiation Oncology follow-up planned, though rib radiation may not be optimal.
- Continue morphine ER 45 mg PO TID.
- Use oxycodone IR 15 mg PO q3-4h PRN for breakthrough pain; may increase to 20 mg per dose PRN if pain worsens.
- Do not adjust morphine dose without contacting palliative care team.
- Contact palliative care team if oxycodone is needed more frequently or if consistently requiring 20 mg, to reassess and update prescription dosing.
- Follow up with Radiation Oncology next week to discuss additional radiation.
- Start ribociclib today; counseled on potential pain improvement timeline.
- Send morphine refill request in 1 week to prevent running out before next visit.
- Contact palliative care team next week for uncontrolled or worsening pain.

Nausea and decreased appetite
Intermittent nausea with one severe episode, no emesis. Appetite reduced, prefers small, soft meals. Using prochlorperazine PRN, not taking ondansetron. Will reassess after starting ribociclib. Olanzapine may be considered if symptoms persist.
- Continue prochlorperazine PRN for nausea.
- Use ondansetron PRN for acute or severe nausea; may use scheduled if nausea becomes frequent.
- Reassess nausea and appetite after starting ribociclib.
- Consider olanzapine if persistent decreased appetite or nausea.

Opioid-induced constipation
Bowel movements daily to every other day with pasty stool consistency and persistent bloating. Meeting frequency goal but with sensation of incomplete evacuation.
- Maintain bowel movement goal of every 1-2 days.
- Add fiber supplement to increase stool bulk and assess response.
- Prioritize protein and caloric intake; use fiber supplement rather than major dietary changes if intake is limited.
- If bowel movements decrease to every 2-3 days after adding fiber, reduce or discontinue fiber supplementation.

Pain
Pain Source: Cancer
Opioid Prescriber: Palliative
Long Acting Opioid (strength/dose/qty): Morphine ER 45 mg TID
Short Acting Opioid (strength/dose/qty): Oxycodone 10-15 mg every 3-4 hours PRN for pain
Adjuvant Meds: methocarbamol 750 mg every 6 hours, Tylenol 1000 mg TID
MED: 250
PMP Check (08/04/26): Yes
Opioid agreement:signed Yes

DISPOSITION:
Follow up visit in 2 weeks

FUNCTIONAL ASSESSMENT:
ECOG Performance Scale: (1) Restricted in physically strenuous activity, ambulatory and able to do work of light nature
Palliative Performance Scale:
Prognosis: Uncertain of prognosis

Subjective
PALLIATIVE CARE DISCUSSION:
Social History: Lives in Kirkland with husband Mark. 2 children ages 9 and 11. Corporate job. Working full time but planning to take the next month to treat pain and start treatment.
Understanding/Perspective of Illness: Metastatic disease. Treatment is palliative
Hopes, Strengths And What Brings Life Meaning Or Purpose: More time with 2 kids and family. Continuing to work and do the normal things.
Fears, Concerns, Worries: Worries about pain and controlling symptoms
Communication Preferences: Appreciates detail focused information. Uutilizes MyChart, telehealth as appropriate.
Role Of Spirituality, Faith, Religion, Spiritual Assessment:
Past Experience With Serious Illness/Hospice:
Acceptable Quality Of Life:

Advance Care Planning
FHCC ACP

Legal Next of Kin: Husband Mark
DPOAHC:
POLST:
Living Will/Advanced Directive:

Objective
GENERAL INFORMATION:
Care Team: Patient Care Team:
Paras, Leilani D, MD as PCP - General (Family Practice)
Purcell, William Thomas, MD as Oncologist (Hematology-Oncology)
Shepherd, Annemarie, MD (Radiation Oncology)
Kang, John, MD as Primary Contact (Radiation Oncology)
Symonds, Lynn Katherine, MD as Oncologist (Hematology-Oncology)
Brustkern, Amy K, PA-C as Physician Assistant (Palliative Medicine)

IMPORTANT CLINICAL HISTORY:
Imaging: 7/27/26 MRI C-T-L
IMPRESSION

1. No cord compression. Anterior epidural tumor extension at T5 and T8 levels
Diffuse osseous metastasis multiple cervical, thoracic and lumbar vertebral bodies. Pathologic fractures involving T4, T5 and T8 vertebral bodies with mild height loss at T5 (40%).

This is a preliminary report dictated by Abraham Mengstu M.D., neuroradiology fellow (PGY-6).

Unless an Attending Final Impression appears below, the report has not yet been finalized and an attending radiologist has not reviewed these images.
Pathology: 7/24/26 A) Right iliac crest, biopsy:
- Metastatic carcinoma.
Treatment History: Lupron + AI. Awaiting approval for Ribociclib.

Oncology History Overview Note

7/1/26: MRI T Spine
IMPRESSION:
Diffusely heterogeneous T1 hypointense and multifocal T2 hyperintense marrow signal including 2.3 x 2.3 cm expansile aneurysmal bone cyst like lesion in T5 vetebral body and similar lesions in T1, T8, T9, T10 and vertebral bodies, as well as 1.2 x 1.1 cm expansile T1 isointense, T2 hyperintense lesion in the posterior elements of T10.
Additionally there is a 1.8cm ovoid T2 hyperintense mass in the visualized posterior right liver lobe. While multiple aneurysmal bone cysts is a small possibility, the appearance is highly concerning for metastases from unknown primary. Recommend CT chest, abdomena nd pelvis with contrast or PET/CT for further evaluation.
Compression deformities of T1, T4, T5 and T8 vertebral bodies which may be pathologic.
Mild bilateral neural foraminal narrowing at T8-9 secondary to bony expansion.

7/13/26: CT Chest
IMPRESSION
* Multiple osseous lytic lesions, as described, concerning for a neoplastic process.
* Fracture of the left 11th rib.
* A few scattered nodules, measuring up to 4 mm. In the context of a potential primary malignancy, a follow-up CT of the chest in 3 months is advised.

7/13/26: CT A/P
IMPRESSION
Diffuse lytic bone lesions throughout the spine and pelvis without CT evidence of primary malignancy in the abdomen or pelvis. Small bilateral ovarian cysts would be better characterized on transvaginal ultrasound.

7/22/26 PET/MR: Lt breast lesion 3.3x2.4cm SUVmax 1.9 with Rt axillary node 9x8mm SUVmax 2.0. Innumerable bony foci including compression fractures of T4, T8, L5.

7/15/26 Dx imaging: ***Left*** Status post breast reduction. Left breast 9 mm x 7 mm x 11 mm mass at 1 o'clock with ill-defined heterogeneous tissue seen more medially. There is no definite mammographic correlate. Assessment: 4 - Suspicious finding. Left breast 7 mm x 4 mm x 7 mm oval circumscribed mass at 2 o'clock. Assessment: 3 - Probably benign Left breast normal-appearing intramammary lymph node at 2 o'clock. Assessment: 2 - Benign finding. ***Right*** Status post breast reduction. Right breast 13 mm x 8 mm x 15 mm simple cyst at 5 o'clock. Assessment: 2 - Benign finding. At least three morphologically abnormal right axillary lymph nodes. Assessment: 4 - Suspicious finding.

7/21/26 PET/CT:
Mild to moderately FDG-avid lesion in the left lateral breast, concerning for a primary breast neoplasm. No left axillary lymphadenopathy or abnormal FDG uptake within the left axillary lymph nodes. Moderately FDG-avid right axillary lymph node, suspicious for metastatic involvement.
Innumerable markedly intense FDG-avid osseous lesions throughout the axial and appendicular skeleton,

with associated compression fractures involving several vertebral bodies, consistent with widespread metastatic disease. * Given the markedly greater extent and intensity of skeletal FDG uptake relative to the left breast lesion, along with the absence of ipsilateral axillary nodal involvement, the pattern of metastatic disease is atypical for a breast primary, and an alternative primary malignancy should be considered. * Mild to moderately avid left lateral breast lesion, possible neoplastic involvement. No left axillary lymphadenopathy or abnormal FDG uptake within the lymph nodes. * Moderately avid right axillary lymph node, concerning for metastatic.* Innumerable foci of intense FDG uptake involving axial and appendicular skeleton, with compression fractures of few vertebrae, likely metastatic. The intensity of the FDG uptake in the bone metastatic disease in comparison to the breast lesion and negative left lymph node involvement make it less likely to be originaria from the breast.
7/22/26 Left breast bx 1:00 7N: ILC G2 ER (91-100%) PR (91-100%) Her2 (1+) Ki67 21-30%
Right axillary LN: Metastatic carcinoma, Neoplastic cells are morphologically similar to the findings in part A, compatible with metastasis from breast primary

7/24/26 Right iliac crest bx: metastatic carcinoma

7/27/26 CT Full spine * Extensive lytic osseous metastases involving multilevel vertebral bodies and posterior elements. Redemonstrated age-indeterminant mild pathologic fractures (<25% height loss) in the C4, C6, T1, T4, T5, T8, and L5 levels. Findings are grossly similar to the prior PET/MR. * No definite new evidence of significant vertebral fracture or subluxation. * Of note, there are some extra-osseous extension involving left C4/5, left C6/7, and right T8/9 foraminal canals, and S1, S2/3 anterior epidural extension, resulting in spinal canal narrowing as described. Findings are similar to the 07/13/2026 abdominal CT. Consider MRI for evaluation of epidural/foraminal canal involvement if clinically warranted.* Of note, the left C4 and C6 lateral process involvement may involve the left V2 vertebral artery. Consider neck CTA to evaluate luminal patency if clinically warranted.

7/27/26 CT head/neck: Normal head CT. No acute infarct, hemorrhage or mass effect. Normal CTA head. No high-grade stenosis or occlusion. Normal CTA of the neck vessels. No stenosis, dissection or occlusion. Internal carotid artery origin stenosis by NASCET criteria: No significant stenosis by NASCET criteria
7/27/26 MRI Spine: No cord compression. Anterior epidural tumor extension at T5 and T8 levels
Diffuse osseous metastasis multiple cervical, thoracic and lumbar vertebral bodies. Pathologic fractures involving T4, T5 and T8 vertebral bodies with mild height loss at T5 (40%).

7/28/26 XR T spine: On the standing AP, lateral, and swimmer's views, skin metallic markers are noted at apparent levels of pain centered at the T1/2 level and the upper T7 level. The multiple lytic lesions throughout the thoracic spine are better visualized on the prior day CT but grossly stable again consistent with bony metastases without definite evidence of gross pathologic fracture. Again there is essential anatomic alignment on the lateral and frontal views. There are mild degenerative disc changes in the mid and lower thoracic spine.

7/28/26 Radiation Oncology consult inpt- plan to start radiation

7/29/26 Oncology consult inpt- start Lupron 7.5mg, anastrozole 1mg daily, zometa 4mg

Not completed today as phone visit.

Distant Site Telemedicine Encounter
I conducted this encounter via secure, live, audio only conference with the patient. I reviewed the risks and benefits of telemedicine as pertinent to this visit and the patient agreed to proceed.

Provider Location: On-site location (clinic, hospital, on-site office)
Patient Location: At home
Present with patient: Partner

I spent a total of 35 minutes for the patient's care on the date of the service.

Current Outpatient Medications:
• acetaminophen 325 MG tablet, Take 3 tablets by mouth every 8 hours. (Patient not taking: Reported on 7/31/2026), Disp: , Rfl:
• albuterol HFA 108 (90 Base) MCG/ACT inhaler, Inhale 2 puffs by mouth every 4 hours as needed for shortness of breath/ wheezing., Disp: , Rfl:
• anastrozole 1 MG tablet, Take 1 tablet by mouth daily., Disp: 30 tablet, Rfl: 0
• cholecalciferol 50 mcg (2,000 unit) capsule, Take 2 capsules by mouth daily., Disp: , Rfl:
• lidocaine viscous 2 % mouth/throat solution, Take 5 mL by mouth 4 times a day as needed (for throat pain). To avoid numbing tongue, use straw/applicator to apply to back of throat)., Disp: 200 mL, Rfl: 1
• methocarbamol 750 MG tablet, Take 1 tablet by mouth every 6 hours as needed for muscle spasms., Disp: 30 tablet, Rfl: 0
• morphine ER 15 MG ER tablet, Take 1 tablet by mouth every 8 hours. Take with a 30 mg tablet for a total of 45 mg every 8 hours, Disp: 42 tablet, Rfl: 0
• morphine ER 30 MG ER tablet, Take 1 tablet by mouth every 8 hours. Take with a 15 mg tablet for a total of 45 mg every 8 hours, Disp: 42 tablet, Rfl: 0
• naloxone 4 MG/0.1ML nasal spray, Use 1 spray in one nostril for suspected opioid overdose. Call 911. If unresponsive in 2 to 3 minutes, repeat with new naloxone nasal spray in opposite nostril. (Patient not taking: Reported on 7/31/2026), Disp: 2 each, Rfl: 0
• ondansetron 8 MG tablet, Take 1 tablet by mouth every 8 hours., Disp: 90 tablet, Rfl: 0
• oxyCODONE 10 MG tablet, Take 1-1.5 tablets by mouth every 3 hours as needed for moderate pain., Disp: 170 tablet, Rfl: 0
• pantoprazole 40 MG EC tablet, Take 1 tablet by mouth daily on an empty stomach., Disp: 20 tablet, Rfl: 0
• polyethylene glycol 3350 17 g packet, Take 1 packet by mouth daily. Dissolve in 4-8 ounce water., Disp: , Rfl:
• prochlorperazine 10 MG tablet, Take 1 tablet by mouth every 6 hours as needed for nausea/vomiting., Disp: 50 tablet, Rfl: 0
• propranolol 10 MG tablet, Take 1 tablet by mouth daily., Disp: , Rfl:
• ribociclib (600 mg dose) 200 MG tablet therapy pack, Take 3 tablets by mouth daily. Take on days 1 to 21 followed by 7 days off. Repeat every 28 days. Do not take first dose until directed by clinical team., Disp: 63 tablet, Rfl: 0
• senna 8.6 MG tablet, Take 2 tablets by mouth 2 times a day., Disp: 120 tablet, Rfl: 0
• tretinoin 0.025 % cream, Apply 1 application topically 3 times a week. Apply to face., Disp: , Rfl:

Miscellaneous Notes - documented in this encounter

Telephone Encounter - Megan D - 08/13/2026 3:34 PM PDT

Formatting of this note might be different from the original.

RN call following ACE visit yesterday. Yvonne feels that new pain regimen is working a lot better. She is taking Morphine ER 45mg and has oxy 10-15mg q3h PRN. She was previously feeling oxy wear off after about 2 hours but after increasing morphine, has spaced out use of oxy to q4h two times.

We discussed communication with RadOnc team following imaging yesterday. Yvonne is not clear on the imaging results from ACE visit and whether lesions were on both sides of ribs previously. I reviewed conversation between Dr. Symonds and team that radiation to ribs can cause ribs to be more fragile, so is generally avoided unless needed for symptom management.

Ribociclib (Kisqali) is due to be delivered tomorrow. I reviewed need for provider visit, EKG, labs, RN education visit before starting. Yvonne is currently scheduled for these on 8/19 but is open to accelerating timing to get started on medication. Plan for RN follow up with team to discuss required visits and timing. RN or PCC will follow up with Yvonne regarding any changes to schedule.

Electronically signed by Megan D at 08/13/2026 4:28 PM PDT

Medications at Time of Discharge - documented as of this encounter

Medication	Sig	Dispense Quantity	Last Filled	Start Date	End Date
acetaminophen 325 MG tablet	Take 3 tablets by mouth every 8 hours.			07/30/2026	
albuterol HFA 108 (90 Base) MCG/ACT inhaler	Inhale 2 puffs by mouth every 4 hours as needed for shortness of breath/wheezing.				
cholecalciferol 50 mcg (2,000 unit) capsule	Take 2 capsules by mouth daily.				
citalopram 20 MG tablet	Take 1 tablet by mouth daily.			08/05/2026	
cyclobenzaprine 10 MG tablet	TAKE 1/2 TO 1 TABLET BY MOUTH THREE TIMES DAILY AS NEEDED FOR MUSCLE SPASMS			04/24/2026	
Lidocaine 10 % cream	Apply 1 g topically.			07/13/2026	
lidocaine viscous 2 % mouth/ throat solution	Take 5 mL by mouth 4 times a day as needed (for throat pain). To avoid numbing tongue, use straw/applicator to apply to back of throat).	200 mL		08/06/2026	
meloxicam 15 MG tablet				05/12/2026	
naloxone 4 MG/0.1ML nasal spray	Use 1 spray in one nostril for suspected opioid overdose. Call 911. If unresponsive in 2 to 3 minutes, repeat with new naloxone nasal spray in opposite nostril.	2 each		07/27/2026	07/27/2027
pantoprazole 40 MG EC tablet	Take 1 tablet by mouth daily on an empty stomach.	20 tablet		08/06/2026	
polyethylene glycol 3350 17 g packet	Take 1 packet by mouth daily. Dissolve in 4-8 ounce water.				
prochlorperazine 10 MG tablet	Take 1 tablet by mouth every 6 hours as needed.			07/24/2026	
propranolol 10 MG tablet	Take 1 tablet by mouth daily.				
tretinoin 0.025 % cream	Apply 1 application topically 3 times a week. Apply to face.				
anastrozole 1 MG tablet	Take 1 tablet by mouth daily.	30 tablet		07/30/2026	08/21/2026
methocarbamol 750 MG tablet	Take 1 tablet by mouth every 6 hours as needed for muscle spasms.	30 tablet		08/10/2026	09/09/2026
morphine ER 15 MG ER tablet	Take 1 tablet by mouth every 8 hours. Take with a 30 mg tablet for a total of 45 mg every 8 hours	42 tablet		08/10/2026	08/21/2026
morphine ER 30 MG ER tablet	Take 1 tablet by mouth every 8 hours. Take with a 15 mg tablet for a total of 45 mg every 8 hours	42 tablet		08/10/2026	08/21/2026
ondansetron 8 MG tablet	Take 1 tablet by mouth every 8 hours.	90 tablet		07/30/2026	08/29/2026
oxyCODONE 10 MG tablet	Take 1-1.5 tablets by mouth every 3 hours as needed for moderate pain.	170 tablet		08/10/2026	09/23/2026
prochlorperazine 10 MG tablet	Take 1 tablet by mouth every 6 hours as needed for nausea/ vomiting.	50 tablet		07/30/2026	08/21/2026
ribociclib (600 mg dose) 200 MG tablet therapy pack	Take 3 tablets by mouth daily. Take on days 1 to 21 followed by 7 days off. Repeat every 28 days. Do not take first dose until directed by clinical team.	63 tablet		08/10/2026	08/28/2026
senna 8.6 MG tablet	Take 2 tablets by mouth 2 times a day.	120 tablet		07/30/2026	08/29/2026

Results - documented in this encounter

CTA Chest PE With Contrast (CTA CHEST PE W CONTRAST) - Final result (08/12/2026 3:50 PM PDT)

Anatomical Region	Laterality	Modality
Chest		Computed Tomography

Specimen (Source)	Anatomical Location / Laterality	Collection Method / Volume	Collection Time	Received Time
			08/12/2026 4:04 PM PDT	

Impressions

08/12/2026 6:06 PM PDT

1. No evidence of acute pulmonary embolism.
2. Multiple lytic lesions as above, which have increased compared to prior. There are multiple new/worsening pathologic compression fractures involving the multiple thoracic vertebral bodies as above. Mild retropulsion of the T5 and T8 vertebral body fractures.
3. Multiple lytic rib lesions many of which involve the cortex. Increase in size of soft tissue component of the left 9th lytic rib lesion. New subacute fracture of the left 7th rib.
4. Left greater than right small lower lobe consolidations, likely atelectasis. Superimposed aspiration can't be excluded.
5. Similar solid pulmonary nodules. No new or enlarging nodules. Consider follow-up per oncology protocol.

COMMUNICATION:
The above was communicated by telephone to Sutanthavibul, ARNP by Lee, MD at 8/12/2026 4:52 PM.

I have personally reviewed the images and agree with the report (or as edited).

Narrative

08/12/2026 6:06 PM PDT

This result has an attachment that is not available.

EXAMINATION:
CTA CHEST PE W CONTRAST: PULMONARY EMBOLISM PROTOCOL

CLINICAL INDICATION:
ACE: 47yoF breast ca with mets to bone, worsening bilateral rib pain L>R anterior and lateral sides. Conern for metastatic lesions vs. PE.

TECHNIQUE:
CTB C3 CTA Chest Suspected pulmonary embolus.
Contiguous axial sections were obtained through the chest with IV contrast. Multiplanar reformatted images were performed. Axial MIPs were generated on the CT scanner console. Automated exposure control and statistical iterative reconstruction techniques substantially lowered patient radiation dose.

CONTRAST:
IOHEXOL 350 MG/ML IV SOLN,50 mL Intravenous,08/12/2026 1550

COMPARISON:
CT chest on 7/13/2026.

FINDINGS:
Pulmonary artery findings: No evidence of acute pulmonary embolism.
The RV/LV ratio is less than 1, indicating no right ventricular pressure overload.

Supraclavicular region: Unremarkable.
Mediastinum: Unremarkable.
Heart: Unremarkable.
Lungs: Left greater than right small lower lobe consolidations. Bronchial wall thickening an scattered mucous plugging. Similar solid pulmonary nodules, for example 4 mm in the left lower lobe (305/177). No new or enlarging pulmonary nodules.
Pleura: Unremarkable.
Chest wall: Unremarkable.
Upper abdomen: Limited pulmonary arterial phase views of the upper abdomen are unremarkable.
Bones:
* Multiple lytic lesions within the bilateral ribs, spine, and sternum, are probably increased when compared to prior.
* Multiple new and/or worsening pathological compression fractures involving the T1, T5, and T8 vertebral bodies (602/56). There is 2 mm of retropulsion of the T5 vertebral body (602/56) and minimal retropulsion of the T8 vertebral body.
* Increased fracture of the T12 vertebral body now involving more of the inferior endplate (602/54). New pathologic fracture of the T10 inferior endplate (602/55).
* Left 9th rib lytic lesion with soft tissue component measuring 3.0 x 1.8 cm (305/150) previously 2.7 x 1.6 cm. Multiple chronic pathologic rib fractures. New subacute fracture of the left 7th rib (305/131).
* Multiple lytic rib lesions involve the cortex, for example (304/133, 304/68, 304/86).

08/12/2026 1:00 PM PDT	Office Visit	Fred Hutch Montlake Acute Clinical Evaluation Clinic 8NE 1959 NE Pacific Street Seattle, WA 98195-0001 206-597-7050	**Parisa Sutanthavibul** 825 Eastlake Avenue East Seattle, WA 98109-4405 206-606-6500 (Work) 206-606-2040 (Fax)	Discharge Disposition: 01 HOME/SELF CARE

Allergies - documented as of this encounter (statuses as of 11/18/2026)

Active Allergy	Reactions	Criticality	Noted Date	Comments
Fentanyl	Other	Low	09/18/2019	Isolated PVCs 8/20/2026 states took Fentanyl without incident. 9/16/2026 took fentanyl without incident
Propofol	Palpitations, Other	Low	09/18/2019	PVC's Palpitation 9/16/2026 took propofol without incident

Medications - documented as of this encounter (statuses as of 11/18/2026)

Medication	Sig	Dispense Quantity	Last Filled	Start Date	End Date	Status
propranolol 10 MG tablet	Take 1 tablet by mouth daily.					Active
naloxone 4 MG/0.1ML nasal spray	Use 1 spray in one nostril for suspected opioid overdose. Call 911. If unresponsive in 2 to 3 minutes, repeat with new naloxone nasal spray in opposite nostril.	2 each		07/27/2026	07/27/2027	Active
albuterol HFA 108 (90 Base) MCG/ACT inhaler	Inhale 2 puffs by mouth every 4 hours as needed for shortness of breath/ wheezing.					Active
tretinoin 0.025 % cream	Apply 1 application topically 3 times a week. Apply to face.					Active
cholecalciferol 50 mcg (2,000 unit) capsule	Take 2 capsules by mouth daily.					Active
polyethylene glycol 3350 17 g packet	Take 1 packet by mouth daily. Dissolve in 4-8 ounce water.					Active
acetaminophen 325 MG tablet	Take 3 tablets by mouth every 8 hours.			07/30/2026		Active
lidocaine viscous 2 % mouth/ throat solution	Take 5 mL by mouth 4 times a day as needed (for throat pain). To avoid numbing tongue, use straw/applicator to apply to back of throat).	200 mL		08/06/2026		Active
pantoprazole 40 MG EC tablet	Take 1 tablet by mouth daily on an empty stomach.	20 tablet		08/06/2026		Active
anastrozole 1 MG tablet	Take 1 tablet by mouth daily.	30 tablet		07/30/2026	08/21/2026	Discontinued (Reorder)
ondansetron 8 MG tablet	Take 1 tablet by mouth every 8 hours.	90 tablet		07/30/2026	08/29/2026	Expired
senna 8.6 MG tablet	Take 2 tablets by mouth 2 times a day.	120 tablet		07/30/2026	08/29/2026	Expired
prochlorperazine 10 MG tablet	Take 1 tablet by mouth every 6 hours as needed for nausea/vomiting.	50 tablet		07/30/2026	08/21/2026	Discontinued (Reorder)
ribociclib (600 mg dose) 200 MG tablet therapy pack	Take 3 tablets by mouth daily. Take on days 1 to 21 followed by 7 days off. Repeat every 28 days. Do not take first dose until directed by clinical team.	63 tablet		08/10/2026	08/28/2026	Discontinued (Med list cleanup)
methocarbamol 750 MG tablet	Take 1 tablet by mouth every 6 hours as needed for muscle spasms.	30 tablet		08/10/2026	09/09/2026	Expired
morphine ER 30 MG ER tablet	Take 1 tablet by mouth every 8 hours. Take with a 15 mg tablet for a total of 45 mg every 8 hours	42 tablet		08/10/2026	08/21/2026	Discontinued (Reorder)
oxyCODONE 10 MG tablet	Take 1-1.5 tablets by mouth every 3 hours as needed for moderate pain.	170 tablet		08/10/2026	09/23/2026	Discontinued (Reorder)
morphine ER 15 MG ER tablet	Take 1 tablet by mouth every 8 hours. Take with a 30 mg tablet for a total of 45 mg every 8 hours	42 tablet		08/10/2026	08/21/2026	Discontinued (Reorder)

Hospital, Clinic, or Other Facility Administered Medication

Ordered Dose	Route	Frequency	Start Date	End Date	Status
45 mg	OR	Once	08/12/2026	08/12/2026	Ended
15 mg	OR	Once	08/12/2026	08/12/2026	Ended

Active Problems - documented as of this encounter (statuses as of 11/18/2026)

Problem	Noted Date	Diagnosed Date
Acute bilateral thoracic back pain	07/28/2026	
Pathologic compression fracture of vertebra	07/28/2026	
Secondary cancer	07/28/2026	
Cancer, metastatic to bone	07/28/2026	
Neck pain	07/27/2026	
Cancer related pain	07/27/2026	
Breast cancer metastasized to bone, unspecified laterality	07/27/2026	
Secondary malignant neoplasm of bone	07/22/2026

FHCC ACUTE CLINICAL EVALUATION (ACE) CLINIC NOTE

ONCOLOGY CARE TEAM

Patient Care Team:
Purcell, William Thomas, MD as Oncologist (Hematology-Oncology)
Symonds, Lynn Katherine, MD as Oncologist (Hematology-Oncology)

IDENTIFICATION/CC

Yvonne Kalley Franklin is a 47 year old female with a diagnosis of breast cancer metastasized to bone currently on hormone therapy with monthly leuprolide IM last dose 7/29, anastrozole 1 mg daily, and Zometa 4 mg infusions every 3-4 weeks (last dose 7/30). Last XRT on 7/29. She presents today for recurrent rib pain (L>R) x3 days.

CURRENT TREATMENT

Treatment goal	[No plan goal]
Plan Name	OP Ribociclib + Endocrine Therapy
Start Date	8/17/2026 (Planned)
End Date	11/9/2026 (Planned)

TREATMENT HISTORY

Oncology History Overview

7/1/26: MRI T Spine
IMPRESSION:
Diffusely heterogeneous T1 hypointense and multifocal T2 hyperintense marrow signal including 2.3 x 2.3 cm expansile aneurysmal bone cyst like lesion in T5 vetebral body and similar lesions in T1, T8, T9, T10 and vertebral bodies, as well as 1.2 x 1.1 cm expansile T1 isointense, T2 hyperintense lesion in the posterior elements of T10. Additionally there is a 1.8cm ovoid T2 hyperintense mass in the visualized posterior right liver lobe. While multiple aneurysmal bone cysts is a small possibility, the appearance is highly concerning for metastases from unknown primary. Recommend CT chest, abdomena nd pelvis with contrast or PET/CT for further evaluation.
Compression deformities of T1, T4, T5 and T8 vertebral bodies which may be pathologic.
Mild bilateral neural foraminal narrowing at T8-9 secondary to bony expansion.

7/13/26: CT Chest
IMPRESSION
* Multiple osseous lytic lesions, as described, concerning for a neoplastic process.
* Fracture of the left 11th rib.
* A few scattered nodules, measuring up to 4 mm. In the context of a potential primary malignancy, a follow-up CT of the chest in 3 months is advised.

7/13/26: CT A/P
IMPRESSION
Diffuse lytic bone lesions throughout the spine and pelvis without CT evidence of primary malignancy in the abdomen or pelvis.
Small bilateral ovarian cysts would be better characterized on transvaginal ultrasound.

7/22/26 PET/MR: Lt breast lesion 3.3x2.4cm SUVmax 1.9 with Rt axillary node 9x8mm SUVmax 2.0. Innumerable bony foci including compression fractures of T4, T8, L5.

7/15/26 Dx imaging: ***Left*** Status post breast reduction. Left breast 9 mm x 7 mm x 11 mm mass at 1 o'clock with ill-defined heterogeneous tissue seen more medially. There is no definite mammographic correlate. Assessment: 4 - Suspicious finding. Left

breast 7 mm x 4 mm x 7 mm oval circumscribed mass at 2 o'clock. Assessment: 3 - Probably benign Left breast normal-appearing intramammary lymph node at 2 o'clock. Assessment: 2 - Benign finding.
Right Status post breast reduction. Right breast 13 mm x 8 mm x 15 mm simple cyst at 5 o'clock. Assessment: 2 - Benign finding. At least three morphologically abnormal right axillary lymph nodes. Assessment: 4 - Suspicious finding.

7/21/26 PET/CT:
Mild to moderately FDG-avid lesion in the left lateral breast, concerning for a primary breast neoplasm. No left axillary lymphadenopathy or abnormal FDG uptake within the left axillary lymph nodes. Moderately FDG-avid right axillary lymph node, suspicious for metastatic involvement.
Innumerable markedly intense FDG-avid osseous lesions throughout the axial and appendicular skeleton, with associated compression fractures involving several vertebral bodies, consistent with widespread metastatic disease. * Given the markedly greater extent and intensity of skeletal FDG uptake relative to the left breast lesion, along with the absence of ipsilateral axillary nodal involvement, the pattern of metastatic disease is atypical for a breast primary, and an alternative primary malignancy should be considered.
* Mild to moderately avid left lateral breast lesion, possible neoplastic involvement. No left axillary lymphadenopathy or abnormal FDG uptake within the lymph nodes. * Moderately avid right axillary lymph node, concerning for metastatic.* Innumerable foci of intense FDG uptake involving axial and appendicular skeleton, with compression fractures of few vertebrae, likely metastatic. The intensity of the FDG uptake in the bone metastatic disease in comparison to the breast lesion and negative left lymph node involvement make it less likely to be originaria from the breast.
7/22/26 Left breast bx 1:00 7N: ILC G2 ER (91-100%) PR (91-100%) Her2 (1+) Ki67 21-30%
Right axillary LN: Metastatic carcinoma, Neoplastic cells are morphologically similar to the findings in part A, compatible with metastasis from breast primary

7/24/26 Right iliac crest bx: metastatic carcinoma

7/27/26 CT Full spine * Extensive lytic osseous metastases involving multilevel vertebral bodies and posterior elements. Redemonstrated age-indeterminant mild pathologic fractures (<25% height loss) in the C4, C6, T1, T4, T5, T8, and L5 levels. Findings are grossly similar to the prior PET/MR. * No definite new evidence of significant vertebral fracture or subluxation. * Of note, there are some extra-osseous extension involving left C4/5, left C6/7, and right T8/9 foraminal canals, and S1, S2/3 anterior epidural extension, resulting in spinal canal narrowing as described. Findings are similar to the 07/13/2026 abdominal CT. Consider MRI for evaluation of epidural/foraminal canal involvement if clinically warranted.* Of note, the left C4 and C6 lateral process involvement may involve the left V2 vertebral artery. Consider neck CTA to evaluate luminal patency if clinically warranted.

7/27/26 CT head/neck: Normal head CT. No acute infarct, hemorrhage or mass effect. Normal CTA head. No high-grade stenosis or occlusion. Normal CTA of the neck vessels. No stenosis, dissection or occlusion. Internal carotid artery origin stenosis by NASCET criteria: No significant stenosis by NASCET criteria
7/27/26 MRI Spine: No cord compression. Anterior epidural tumor extension at T5 and T8 levels
Diffuse osseous metastasis multiple cervical, thoracic and lumbar vertebral bodies. Pathologic fractures involving T4, T5 and T8 vertebral bodies with mild height loss at T5 (40%).

7/28/26 XR T spine: On the standing AP, lateral, and swimmer's views, skin metallic markers are noted at apparent levels of pain centered at the T1/2 level and the upper T7 level. The multiple lytic lesions throughout the thoracic spine are better visualized on the prior day CT but grossly stable again consistent with bony metastases without definite evidence of gross pathologic fracture. Again there is essential anatomic alignment on the lateral and frontal views. There are mild degenerative disc changes in the mid and lower thoracic spine.

7/28/26 Radiation Oncology consult inpt- plan to start radiation

7/29/26 Oncology consult inpt- start Lupron 7.5mg, anastrozole 1mg daily, zometa 4mg

7/29/26 Palliative radiation to C4-T11 800cGy in Fx

INTERVAL HISTORY
Yvonne was referred by the primary oncology team for recurrent rib pain (L>R) x3 days. Analgesia doses were recently increased by Palliative Care, which she started taking last night (Morphine ER 45 mg q8H and Oxycodone 15 mg q3H PRN pain). Last dose Morphine ER 45 mg was at 08:00. Previously Oxycodone 15 mg q3H PRN would wear off at 2 hours, but today she was able to space it out by 4 hours (last taken at 08:00, then at 12:00). The pain goes up to 10/10 with moving or twisting her upper body and is positional when laying in bed. At rest, it is 4/10. Pain prevents her from taking a deep breath. No dyspnea, although she feels like she is "working harder" with activity.

She has pain r/t metastatic lesions along her spine and left side ribs, including pathological compression fractures and a left side rib fracture. The neck and back pain improved after XRT, however she recently noticed the rib pain return bilaterally saying, "It feels like broken ribs on both sides."

She is also having pain on the right side of her throat with swallowing d/t recent XRT. She has a throat spray and lidocaine, although is unsure how to use the lidocaine (swishing/spitting vs. swallowing). The pain is not affecting her oral intake. Denies moist coughing or choking after eating/drinking.

Nausea is relieved by Compazine, no vomiting. She did not take Compazine today and denies nausea. Denies fever, chills, cough, chest tightness, chest pain, difficulty swallowing, nausea, vomiting, changes in appetite, changes in bladder/bowel habits. She takes Senna for constipation, last bowel movement was last night. She is accompanied by her husband, Mark.

REVIEW OF SYSTEMS
Pertinent positives noted in above HPI, otherwise negative ROS.

PROBLEM LIST

Active Ambulatory Problems

	Diagnosis	Date Noted
•	Secondary malignant neoplasm of bone (HCC)	07/22/2026
•	Neck pain	07/27/2026
•	Cancer related pain	07/27/2026
•	Breast cancer metastasized to bone, unspecified laterality (HCC)	07/27/2026
•	Acute bilateral thoracic back pain	07/28/2026
•	Pathologic compression fracture of vertebra (HCC)	07/28/2026
•	Metastatic malignant neoplasm (HCC)	07/28/2026
•	Cancer, metastatic to bone (HCC)	07/28/2026

Resolved Ambulatory Problems

	Diagnosis	Date Noted
•	No Resolved Ambulatory Problems	

Past Medical History:

Diagnosis	Date	
•	Breast cyst	Always

PHYSICAL EXAMINATION
VITAL SIGNS: BP 119/80 (Patient Position: Sitting) | Pulse 82 | Temp 37.2 °C (Oral) | Resp 16 | SpO2 96%
Physical Exam
Constitutional:
General: She is not in acute distress.
Appearance: Normal appearance. She is not ill-appearing or toxic-appearing.
Cardiovascular:
Rate and Rhythm: Normal rate and regular rhythm.
Pulses: Normal pulses.
Heart sounds: Normal heart sounds.
Pulmonary:
Effort: Pulmonary effort is normal. No respiratory distress.
Breath sounds: Normal breath sounds. No stridor. No wheezing, rhonchi or rales.
Chest:
Comments: **Rib pain is bilateral (L>R) anteriorly under each breast that radiates laterally. No rib pain posteriorly. Both L & R side anterior ribs under the breast protrude slightly outward with palpable lesions. There is tenderness with palpation.**
Abdominal:
Palpations: Abdomen is soft.
Neurological:
Mental Status: She is alert.

IMAGING/PERTINENT STUDIES
CTA Chest PE w Contrast
Narrative: EXAMINATION:
CTA CHEST PE W CONTRAST: PULMONARY EMBOLISM PROTOCOL

CLINICAL INDICATION:
ACE: 47yoF breast ca with mets to bone, worsening bilateral rib pain L>R anterior and lateral sides. Conern for metastatic lesions vs. PE.

TECHNIQUE:
CTB C3 CTA Chest Suspected pulmonary embolus.
Contiguous axial sections were obtained through the chest with IV contrast. Multiplanar reformatted images were performed. Axial MIPs were generated on the CT scanner console. Automated exposure control and statistical iterative reconstruction techniques substantially lowered patient radiation dose.

CONTRAST:
IOHEXOL 350 MG/ML IV SOLN,50 mL Intravenous,08/12/2026 1550

COMPARISON:
CT chest on 7/13/2026.

FINDINGS:
Pulmonary artery findings: No evidence of acute pulmonary embolism.
The RV/LV ratio is less than 1, indicating no right ventricular pressure overload.

Supraclavicular region: Unremarkable.
Mediastinum: Unremarkable.
Heart: Unremarkable.
Lungs: Left greater than right small lower lobe consolidations. Bronchial wall thickening an scattered mucous plugging. Similar solid pulmonary nodules, for example 4 mm in the left lower lobe (305/177). No new or enlarging pulmonary nodules.
Pleura: Unremarkable.
Chest wall: Unremarkable.
Upper abdomen: Limited pulmonary arterial phase views of the upper abdomen are unremarkable.
Bones:
* Multiple lytic lesions within the bilateral ribs, spine, and sternum, are probably increased when compared to prior.
* Multiple new and/or worsening pathological compression fractures involving the T1, T5, and T8 vertebral bodies (602/56). There is 2 mm of retropulsion of the T5 vertebral body (602/56) and minimal retropulsion of the T8 vertebral body.
* Increased fracture of the T12 vertebral body now involving more of the inferior endplate (602/54). New pathologic fracture of the T10 inferior endplate (602/55).
* Left 9th rib lytic lesion with soft tissue component measuring 3.0 x 1.8 cm (305/150) previously 2.7 x 1.6 cm. Multiple chronic pathologic rib fractures. New subacute fracture of the left 7th rib (305/131).
* Multiple lytic rib lesions involve the cortex, for example (304/133, 304/68, 304/86).
Impression:
1. No evidence of acute pulmonary embolism.
2. Multiple lytic lesions as above, which have increased compared to prior. There are multiple new/worsening pathologic compression fractures involving the multiple thoracic vertebral bodies as above. Mild retropulsion of the T5 and T8 vertebral body fractures.
3. Multiple lytic rib lesions many of which involve the cortex. Increase in size of soft tissue component of the left 9th lytic rib lesion. New subacute fracture of the left 7th rib.
4. Left greater than right small lower lobe consolidations, likely atelectasis. Superimposed aspiration can't be excluded.
5. Similar solid pulmonary nodules. No new or enlarging nodules. Consider follow-up per oncology protocol.

ASSESSMENT/PLAN
Yvonne Kalley Franklin is a 47 year old female with a diagnosis of breast cancer metastasized to bone currently on hormone therapy with monthly leuprolide IM last dose 7/29, anastrozole 1 mg daily, and Zometa 4 mg infusions every 3-4 weeks (last dose 7/30). Last XRT on 7/29. She presents today for recurrent rib pain (L>R) x3 days.

Yvonne is A/O x4, not in acute distress, and not toxic-appearing. At rest, pain level is tolerable at 4/10. Vital signs are stable: temp 37 C, BP 115/76, HR 84, RR 16, 98% on room air.

Labs notable for Hct 35, but is overall improving compared the past several weeks. Other labs unremarkable.

 # Recurrent rib pain, L>R
Differential diagnoses include, but are not limited to, disease-related pain r/t lytic lesions, costochondritis, or PE. Considered cardiac etiology, but patient does not have chest pain, chest tightness, or dyspnea. Although patient has a low risk Well' Score, will order CTA chest PE as patient reported the feeling of "working harder" with activity. However, more suspicious for disease-related pain given prior imaging and patient's clinical picture.

CT negative for PE. However, there was evidence of worsening disease including new/worsening pathologic compression fractures, increased size of the L 9th lytic rib lesion, a subacute fracture of the L 7th rib, and multiple diffuse lytic lesions within bilateral ribs/ spine/sternum. These findings are consistent with the patient's report of pain. Findings discussed with patient and husband, which prompted further questions about starting treatment more urgently and other options such as XRT to the ribs. Recommend following up with the primary oncology team.

 # Throat pain, right
Patient reports mild pain with swallowing after XRT. It is not affecting her oral intake or ability to swallow safely. Answered patient's questions regarding how to use the lidocaine as swishing and spitting will not help her throat pain. We discussed it is OK to swallow the lidocaine for throat pain as directed: "Take 5 mL by mouth 4 times a day as needed (for throat pain). To avoid numbing tongue, use straw/applicator to apply to back of throat)." Patient verbalizes understanding.

Considering findings from today's work-up not necessitating urgent transfer to a higher level of care, the patient remains afebrile with stable vital signs, and is not in acute distress, the plan is to discharge home and follow-up with the primary oncology care team.

Yvonne is in agreement with the plan and feels comfortable with discharge home. She reports understanding of Urgent and ED precautions for worsening signs and symptoms or other acute changes. After-hours contact information provided for any urgent questions. Aware of the need for follow-up with primary oncology team related to today's acute visit. Understanding of the plan of care above verified by teach back.

Plan
- CTA chest PE --> negative for PE, but showed worsening disease (see report above)
- Morphine ER 45 mg and Oxycodone 15 mg x1 dose each to stay on home schedule --> reports pain is tolerable and declined additional analgesia
- OK to DC home
- Message sent to team for follow-up

Diagnosis: The primary encounter diagnosis was Breast cancer metastasized to bone, unspecified laterality (HCC). Diagnoses of Cancer related pain and Rib pain were also pertinent to this visit.
Condition: Stable
Disposition: Home

The patient discharged from clinic by private vehicle with her husband

TIME STATEMENT
Total time spent on the care of this patient was 60 minutes including reviewing records and prior test results; face-to-face evaluation and physical examination; ordering tests, medications, imaging, or procedures and interpreting results; documentation of medical decision making; patient, family, and caregiver education and counseling of diagnosis, treatment options, and plan of care; coordination of care; and communication with other healthcare professionals.

Assessment and Plan:

Hand off: No

Discharge:
Patient tolerated treatment well and without complications.
Discharge disposition:
Accompanied by: Self and Family
Discharged to: Home
Response: States understanding of plan
Preferred language: English
Interpretation/Language Services: No interpreter

Summary: Patient arrived to the clinic with her husband, reporting severe rib pain 6/10 (after taking pain medications at home) related to tumor metastasis. Pt is on palliative care. AC PIV 20G placed with a second attempt, tolerated well. Labs collected: CBC/CMP. Pt underwent CT w contrast, stated that flashing and contrast injections at CT were painful. Pt ordered/given Oxycodone 15 mg and Morphine 45 MG PO with moderate reduction in pain. Please review CT result per request. Pt VS stable, released home accompanied by her husband. Palliative care manages pain regimen.

Miscellaneous Notes - documented in this encounter

Telephone Encounter - Megan D - 08/12/2026 9:43 AM PDT

Formatting of this note might be different from the original.

RN call to Yvonne following MCM. She continues to have pain in her ribs, despite pain medication escalation with palliative care team. She picked up increased morphine prescription last night and has taken **two** doses of the 45mg Morphine ER - first last night, then again this morning (increase discussed in 8/10 telephone note). She continues to use 15mg Oxycodone q3h. Plan is to decrease oxy use with increased dose of morphine, though she has not been able to do this yet due to pain levels.

Yvonne's pain is mostly in the ribs - L side is more painful than R but there's pain in both. Her neck and back pain improved a little after radiation, with most improvement noted in her neck. She has some pain on the R side of her throat with swallowing, though this may be due to recent radiation. She has a throat spray from Dr. Kang but will let us know if she needs additional medication for throat pain - discussed swish/swallow options.

We discussed option for ACE visit, per team discussion earlier this week. Potential for Chest CT to r/o other causes of pain. Yvonne is open to ACE visit and we discussed the process for ACE referrals. Her husband will drive her to ACE visit if approved. Their ideal timing is between 12:30-2, but they can be flexible if she is able to be seen.

Yvonne denies SOB and fever. No systemic symptoms. She is using bowel medications and having BM once a day or every other day. She does feel bloated most of the time but denied abd pain. Nausea is controlled with home PRN antiemetics.

Plan for RN follow up with ACE and return call to Yvonne either via RN or ACE team.

Spoke with Sam Doyle, ARNP. Their team will reach out to Yvonne to schedule at ACE 8NE.

Electronically signed by Megan D at 08/12/2026 10:39 AM PDT

Miscellaneous Notes - documented in this encounter

Telephone Encounter - Amy C - 08/11/2026 4:25 PM PDT

Formatting of this note might be different from the original.

FRED HUTCH PALLIATIVE CARE NURSE NOTE

VISIT INFORMATION:
Date of Service: 8/11/2026

ID/CC: Medication Issue

Participants: Patient and Medical personnel Laura, Safeway Pharmacy

Problem: Prescription / Pharmacy Issue
Impression: Received secure chat from ACE provider reporting that Yvonne's husband had called them directly saying the pharmacy would not dispense Yvonne's morphine ER and she was out. I contacted Laura, the pharmacist at Safeway, who stated that she was aware there is a dose increase and that she spoke with the patient earlier and told her that she was preparing both morphine extended-release prescriptions for pickup. Confirmed no PA required, but pharmacist did require a chart note even with Yvonne's cancer diagnosis. RN sent most recent palliative care provider and RN note per pharmacist request. Called Yvonne and Mark and informed them pharmacy is preparing both for pickup. Advised to contact the pharmacy for any additional questions about picking up.

EVALUATION AND PLAN:

Nursing Interventions:
Confirmed patient's preferred pharmacy
Pharmacy contacted

Plan:
Waiting on response from provider

Patient/Caregiver Response:
Aware of existing appointments, Aware of clinic contact information, and States understanding of plan

Electronically signed by Amy C at 08/11/2026 4:45 PM PDT

Plan of Treatment - documented as of this encounter

CHILD LIFE NOTE

VISIT INFORMATION

Referral from: Provider - Lynn Symonds, MD

Reason for Visit: Adult Consult

Encounter Type: Phone

Location: SLU

Present at Encounter: Patient and Spouse, Mark

Ages of Children: 9.5yo son, Cooper, and 11.5yo daughter, Kenzie (turns 12yo around Thanksgiving)

Visit Type: Initial

Patient Type (Diagnostic/Treatment Team): Breast BRONC (Breast Oncology)
Diagnosis per chart, "Breast cancer metastasized to bone, unspecified laterality"

Interventions: Introduce services
Psychosocial education related illness, treatment, or hospitalization
Emotional support

This Certified Child Life Specialist (CCLS) received referral and spoke with Pt and Pt's husband, Mark on the phone to provide resources and guidance on conversations to support Pt's children. This CCLS introduced self and services. Pt expressed interest in child life resources and open and receptive to ideas and conversations regarding this topic with children. Pt share finding out about diagnosis in July, children know that Pt has been dealing with back pain, and Pt and Mark hoping to tell children regarding diagnosis soon. This CCLS talked with Pt regarding ways to start and continue the conversations, as well as provided scripts for potential questions that children may ask. This CCLS listened and provided ideas verbally, items to consider, as well some links and resources via e-mail to facilitate coping and adjusting to caregiver illness, including supportive community organizations, camps, etc. Pt expressed appreciation.

Evaluation/Plan: For future child life referrals, contact the supportive care scheduling line at 206-606-5890.

Time Spent:
• Direct: 45min
• Indirect: 15min
• Total: 60min

Yifan Wang
Certified Child Life Specialist

Electronically signed by Yifan W at 08/12/2026 3:51 PM PDT

Miscellaneous Notes - documented in this encounter

Telephone Encounter - Megan D - 08/11/2026 8:27 AM PDT

Formatting of this note might be different from the original.

RN call to CVS Specialty Pharmacy. Verified pt identifiers. Call transferred to Pharmacist, Ben. Asked for clarification on what is needed for medication to be shipped to pt, as team has not encountered pharmacy asking for EKG before. RN relayed to Ben that labs, EKG, and education visit will be completed prior to pt starting Ribociclib (Kisqali), though dates are not set at this time. Ben advised that with team's confirmation that labs and EKG will be done, they can ship medication. Estimated delivery date 8/14. RN confirmed that pharmacy is not requesting copy of EKG at this time. They will reach out to FHCC team if this is needed.

Electronically signed by Megan D at 08/11/2026 9:10 AM PDT

FRED HUTCH PALLIATIVE CARE NURSE NOTE

VISIT INFORMATION:
Date of Service: 8/10/2026

ID/CC: Pain Management and Medication Management

Participants: Patient

Problem: Pain
Impression: Yvonne increased her morphine extended-release to three doses/day and tried to transition to oxycodone q4 hours instead of q3, but has had bilateral rib pain increase. She notified oncology about her increased rib pain. Using 15 mg q3h except at night. Uses 7 doses/day. She did try to increase time between doses to 4 hours a few times over the weekend, but was not able to tolerate it. Functionally managing. Pain is worst when sitting or laying around, "the up-and-down motion makes it worst." Rib pain is also worse at night. Denies increased sedation, somnolence, or nausea. Had a bowel movement yesterday, has regularly about every other day. Using Miralax BID, senna BID, and prune juice.

Pain Source: [X] Cancer [ ] Non-cancer [ ] Peripheral neuropathy [ ] Other
Opioid Prescriber: Palliative care
Long Acting Opioid (strength/dose/qty): morphine extended-release 30 mg TID* *Increased from BID at last provider visit 8/4/2026*
Short Acting Opioid (strength/dose/qty): oxycodone 10 mg tabs; 10-15 mg q3-4h PRN
Adjuvant Meds: acetaminophen, methocarbamol 750 mg takes twice daily
Total MEDD:
PMP Check (past 30 days):
WA PMP Medication Dispense History (from 5/11/2026 to 8/10/2026)

	Dispensed	Sold	Days Supply	Quantity
MORPHINE SULF ER 30 MG TABLET	7/30/2026	No sold data	14	28 unspecified
OXYCODONE HCL (IR) 10 MG TAB	7/30/2026	No sold data	14	170 unspecified
OXYCODONE HCL (IR) 5 MG TABLET	7/17/2026	No sold data	8	100 unspecified
ACETAMINOPHEN-COD #3 TABLET	7/14/2026	No sold data	5	20 unspecified
ALPRAZOLAM 0.25 MG TABLET	7/10/2026	No sold data	30	30 unspecified

Pill counts: morphine extended-release - 6 tabs
Oxycodone ~80 tabs, uses 10/day
Methocarbamol 750 mg - few days left

EVALUATION AND PLAN:

Nursing Interventions:
Side effect management discussed
Reviewed prescribed medication instructions
Confirmed patient's preferred pharmacy
Refill request sent to provider
Provider contacted

Plan:
Per Kim Harlow, ARNP:
Increase morphine extended-release to 45 mg q8h, prescriptions sent to pharmacy
RN follow up later this week
Yvonne will call with any questions or concerns meanwhile

Patient/Caregiver Response:
Aware of existing appointments, Aware of clinic contact information, and Restates plan

Electronically signed by Amy C at 08/10/2026 1:54 PM PDT

Telephone Encounter - Zena C - 08/07/2026 3:42 PM PDT

Formatting of this note might be different from the original.

RN called patient. Communicated information from Dr. John Kang. Asked pt to call in one week to update Dr. Kang about her back pain. Pt agreed to this plan.

Dr. John Kang, 08/07/26:
Up to about 2-3 weeks later I think.
Thanks,
John

Kaci, RN, 08/07/26:
RadOnc team: can you please follow up with Yvonne regarding her back pain? She does not have new or worsening pain, but for peace of mind is hoping to understand a timeline when she might have more noticeable improvement.

FRED HUTCH PALLIATIVE CARE NURSE NOTE

VISIT INFORMATION:
Date of Service: 8/7/2026

ID/CC: Pain Management

Participants: Patient

Problem: Pain
Impression: RN call to Yvonne to check in on pain after Amy Brustkern recommended increase of morphine to 30mg TID. Yvonne understood that when she increased Morphine ER to 30mg TID she should reduce oxycodone from 15mg q3hrs to every 4 hours. Yvonne increased morphine ER 30mg to TID on Wednesday but was unable to reduce oxycodone to 15mg q4hr due to uncontrolled pain.
As she understood it, she reduced morphine ER 30mg back to BID so she could continue oxycodone 15mg q3hr.

I explained that the goal is to be able to reduce oxycodone use after we increase Morphine ER but not at the expense of uncontrolled pain . I explained that she should continue Morphine ER 30mg TID and can utilize oxycodone 10mg-15mg q3-4 hours. I educated to continue to attempt to reduce 1 or 2 doses to oxycodone q4 hr, but not at the expense of uncontrolled pain.
She also shared that while taking Morphine ER 30mg BID with oxycodone 15mg q3 hr - her pain is well controlled, not in pain crisis currently.

Morphine ER 30mg: 12 tabs
Oxycodone 10mg: 118 (taking 12 tabs per day)

EVALUATION AND PLAN:

Nursing Interventions:
Side effect management discussed
Confirmed patient's preferred pharmacy
Refill request sent to provider

Plan:
She will trial increase of Morphine ER 30mg TID this weekend and RN call Monday

Patient/Caregiver Response:
Aware of clinic contact information and States understanding of plan

Miscellaneous Notes - documented in this encounter

Telephone Encounter - Kaci E - 08/10/2026 12:21 PM PDT

Formatting of this note might be different from the original.

RN returned call to Yvonne to give her an update on the Ribo Rx. Our pharmacy team contacted CVS and should be ready to fill soon. Pt will try to call CVS later this afternoon to arrange delivery.

Patient also reports new bilateral rib pain:

Onset: Last night 8/9
Location: Bilateral ribs, right below breast. L side always had "a little bit" of pain, but R side is new.. Now on both sides right underneath breasts.
Severity: 8-9/10
Character: Constant pain. "Hurts a lot". Pt states this feels similar to when she started to have neck pain from known disease as well.

- Denies chest pain
- Denies SOB (can't take a huge deep breath due to back pain, but this is not new)
- Denies any identifiable trigger that seems coorelated to pain onset
- Nothing in particular makes the pain worse or better

Pain management last 24 hours:
- Morphine 30mg TID
- Oxycodone 15mg q 3 hours

Routed to Bronc APP and Pall Care APP for recommendations.

Electronically signed by Kaci E at 08/10/2026 12:40 PM PDT
Electronically signed by Kaci E at 08/10/2026 12:41 PM PDT

Telephone Encounter - Kaci E - 08/10/2026 10:31 AM PDT

Formatting of this note might be different from the original.

Incoming VM received from Yvonne. She states that she called CVS pharmacy again to fill her Ribociclib and was told "it is not a valid prescription" and that our team should "call in to give a verbal" for the fastest resolution.

Routed to pharmacy for assistance.

Electronically signed by Kaci E at 08/10/2026 10:32 AM PDT

Telephone Encounter - Kaci E - 08/07/2026 2:06 PM PDT

Formatting of this note might be different from the original.

Call back to Yvonne to let her know that Ribo rx has been sent again to CVS. She will try contacting them again and knows to reach out if there is any further trouble.

Electronically signed by Kaci E at 08/07/2026 2:06 PM PDT

Telephone Encounter - Rachel D - 08/07/2026 1:51 PM PDT

Formatting of this note might be different from the original.

E-faxed rx to CVS.
[image]

Telephone Encounter - Kaci E - 08/07/2026 12:51 PM PDT

Formatting of this note might be different from the original.

RN called CVS specialty to understand confusion around Ribociclib script. Spoke with pharmacist who states that the rx appears to have been discontinued on their end. Pharmacist suggests routing another eRx or calling to place verbal order. CVS Oncology specialty phone: 855-539-4712.
Routed to pharmacy team for assistance.

Electronically signed by Kaci E at 08/07/2026 12:52 PM PDT
Electronically signed by Kaci E at 08/07/2026 12:55 PM PDT

Telephone Encounter - Kaci E - 08/07/2026 11:26 AM PDT

Formatting of this note might be different from the original.
Incoming call from Yvonne. She states that she called CVS pharmacy to initiate picking up her first cycle of Ribociclib, however the representative that she spoke with told her that CVS did not have the Rx and that it was routed to Fred Hutch. Upon chart investigation it appears this was routed to CVS and electronically received at 1039 today.

Pt also is wondering when she might expect to have pain improvement from her recent spine radiation. She states that the pain is not worsening, and she might be noticing "micro-improvement" but nothing substantial.

Routed note to pharmacy team for help with investigating Ribo rx, and to RadOnc team for input on back pain improvement timeline.

Electronically signed by Kaci E at 08/07/2026 11:33 AM PDT

Miscellaneous Notes - documented in this encounter

Telephone Encounter - Zena C - 08/06/2026 8:46 AM PDT

Formatting of this note might be different from the original.

RN called patient to get more information.

Regarding her back pain, today, pain is 8-9/10 - a little better than yesterday.

Pt says she is having discomfort in her esophagus, in the center of her chest. She notices this more when swallowing liquids. When the liquid goes down her esophagus, she feels a burning sensation. "It's not preventing me from drinking, but it's a new symptom that I'm noticing."
She didn't notice it when eating her breakfast. She understands to eat softer, more moist food, and avoid drinks that are very hot or very cold.

Electronically signed by Zena C at 08/06/2026 10:16 AM PDT

FHCC PALLIATIVE CARE NOTE

VISIT INFORMATION:
Date of Service: 8/4/2026
Type of Visit: Initial Visit
Referral Reason: Cancer-related pain, Symptom management (non-pain), and Emotional support/coping

ID/CC: 47 year old female with de novo metastatic breast cancer with osseous metastases. Diagnosed 07/2026. Admission 7/27/26 for pain. Currently on Lupron and anastrozole.

Use of Ambient Listening:
Was ambient listening technology used during this visit and was verbal consent for recording obtained? **Yes, used in visit. Consent was obtained.**
?

[No matching plan found]

Addressed during this visit: Patient's narrative, Symptom management, Optimizing quality of life, and Education about palliative care
Participants: Patient and Spouse: Mark

PLAN:
Problem: Education about palliative care
Impression: Explained the role of palliative care including services provided and philosophy of care.
Plan: Pt agrees to ongoing palliative care support

History of Present Illness
Yvonne Kalley Franklin is a 47 year old female with metastatic stage IV invasive lobular breast cancer with osseous metastases who presents for cancer pain management and initial visit with palliative care.

Referred after a recent hospitalization for a pain crisis.

Over several months prior to diagnosis, mid-Feb 2026 marked onset of focal sharp right subscapular pain with a pleuritic component and difficulty taking a breath. Initial X-rays were negative. Pain persisted despite MSK specialist evaluation, PT, repeat X-rays, and a 7 day course of oral steroids without benefit. MRI obtained 7/1/26 after the request process began around 6/1/26, followed by biopsies and PET scans. No preceding breast symptoms; routine annual mammograms with ultrasound due to dense breasts.

Cancer pain primarily involves the neck and back, worsened by position changes and muscle engagement including lying down, sitting down or standing up, turning in bed, twisting, and carrying light items. She avoids bending and uses a straight-line squat to pick items up. During last week's pain crisis, neck pain with spasms limited mobility and she was unable to walk at the time of a radiation consultation. Since discharge on the current regimen, worst pain 7/10 with improvement to 2-3/10 after medication. Intermittent chills occur shortly before pain returns when oxycodone is due. Overnight sleep previously required alarms for dosing; last night she slept through a 2 AM alarm and awoke at 5 AM without increased pain.

Current analgesic regimen: morphine ER 30 mg twice daily at 9 AM and 9 PM; oxycodone IR 15 mg every 3 hours around the clock, typically 6 doses per day and 5 doses last night; extra-strength acetaminophen three times daily; methocarbamol 750 mg four times daily. Skipping methocarbamol for a day worsened symptoms. Opioid side effects include loopiness and brain fog; sedation was worse initially and has improved somewhat with acclimation.

Constipation has been significant on opioids. Current bowel regimen: Miralax twice daily and senna 2 tabs twice daily; over the last 2 days she added prune juice plus milk of magnesia due to absent bowel movements, which has been effective but has led to loose or liquid stools. Nausea has been well controlled for about a week; she continues the hospital regimen of two antiemetics on a scheduled alternating pattern, one about every 6 hours and one about every 8 hours, and she denies current nausea.

Goals of Care
Caregiver was present for the discussion. I explained the role of palliative care as a consultative service alongside oncology to support quality of life, symptom management, and assistance with advance care planning and decision support.

She described living at home with her spouse and two children and identified additional support from her mother, brother, sister-in-law, and local friends. She shared plans to take about a month off work to focus on getting pain controlled and adjusting to treatment, with the goal of returning to her usual routines if treatment is effective. She emphasized that maintaining normal life, meaning, and purpose through work and family roles is important for her coping.

I asked her to summarize her understanding of the illness. She stated she has stage IV breast cancer that is treatable but not curable and has spread to bone, with pain as the presenting symptom. I reinforced that metastatic breast cancer can be very treatable and that symptom improvement can be dramatic with effective therapy, with the goal of stabilizing disease while preserving function and quality of life.

She expressed hope that treatment will allow reduction of opioid use due to unwanted side effects and brain fog. She articulated a minimum acceptable quality of life centered on being awake, functional, and not overly sedated, while also avoiding uncontrolled pain. We discussed balancing analgesia with alertness and function, including the shared goal of sleeping through the night without setting alarms for breakthrough dosing.

She raised concerns about financial impact of cancer care despite having good insurance. I discussed that most families with good insurance are typically able to avoid major out-of-pocket costs, reviewed the role of appeals and alternative medication options when coverage barriers arise, and encouraged contacting the care team rather than paying unexpected high pharmacy charges. I noted availability of patient navigation resources for insurance and disability-related questions.

She discussed upcoming Child Life support to help talk with her children about the diagnosis and her desire for transparency to maintain trust. I affirmed this priority and reviewed availability of social work and family support resources.

Assessment & Plan
Cancer pain management
Cancer-related axial skeletal pain from metastatic breast cancer improved but requires frequent short-acting opioids with functional limitations and side effects.
- Increase morphine ER to 30 mg PO TID.
- Continue oxycodone IR 10-15 mg PO q3-4h PRN; take at pain onset (4-5/10).
- Morphine ER and oxycodone IR may be taken together.
- Take oxycodone IR before bed for nocturnal pain.
- No alarm for overnight dosing; take PRN if pain wakes her.
- Continue acetaminophen and methocarbamol; maximize acetaminophen between oxycodone doses.
- Continue methocarbamol 750 mg; stagger doses and reassess for sedation.
- Do not crush oxycodone tablets.
- Palliative care team to manage opioid changes and refills; coordinate with oncology.
- Nursing check-in Friday for pain control and PRN use; update morphine prescription.
- Follow up with palliative care pharmacist next week.
- Follow up with palliative care clinician in a couple of weeks; telehealth acceptable.
- Contact palliative care team for urgent issues or medication needs.
- Notify palliative care team 3-4 days before running out of medications.
- Signed opioid agreement form.

Opioid-induced constipation
Opioid-induced constipation managed with multi-agent regimen; high risk persists due to opioid and antiemetic use.
- Continue senna 2 tabs PO BID.
- Continue polyethylene glycol 1-2 times daily; increase if no bowel movement by day 2.
- Use prune juice and milk of magnesia as rescue therapy.
- Target soft, formed bowel movement every 1-2 days.
- Increase activity and hydration.
- Reduce or stop scheduled ondansetron.
- Contact palliative care team if constipation persists.

Nausea
Nausea previously present on opioids, now controlled with antiemetics.
- Discontinue scheduled antiemetics; use PRN at nausea onset.
- Prefer prochlorperazine PRN; use ondansetron if ineffective.
- Trial one antiemetic PRN at a time.

Metastatic invasive lobular breast cancer to bone

Stage IV ER/PR-positive, HER2 low/negative metastatic breast cancer with bony metastases; treatable but not curable. Early symptom improvement noted.
- Coordinate with oncology for disease-directed therapy; palliative care for symptom management.
- Continue Lupron, anastrozole, Zometa, and radiation therapy.
- Ribociclib planned with labs monitored per protocol.
- Assess treatment response with symptoms, labs, and imaging every 3 months.
- Proceed with Child Life visit for guidance on communicating with children.
- Acknowledge social work referral; involve palliative care social worker if needed.
- Contact care teams for insurance/cost concerns; do not pay large unexpected costs without notifying team.

Pain
Pain Source: Cancer
Opioid Prescriber: Palliative
Long Acting Opioid (strength/dose/qty): Morphine ER 30 mg BID
Short Acting Opioid (strength/dose/qty): Oxycodone 10-15 mg every 3-4 hours PRN for pain
Adjuvant Meds: methocarbamol 750 mg every 6 hours, Tylenol 1000 mg TID
MED:
PMP Check (08/04/26): Yes
Opioid agreement:signed Yes

DISPOSITION:
RN check in later this week
PC pharm next week
Follow up visit in 3-4 weeks

FUNCTIONAL ASSESSMENT:
ECOG Performance Scale: (1) Restricted in physically strenuous activity, ambulatory and able to do work of light nature
Palliative Performance Scale:
Prognosis: Uncertain of prognosis

Subjective
PALLIATIVE CARE DISCUSSION:
Social History: Lives in Kirkland with husband Mark. 2 children ages 9 and 11. Corporate job. Working full time but planning to take the next month to treat pain and start treatment.
Understanding/Perspective of Illness: Metastatic disease. Treatment is palliative
Hopes, Strengths And What Brings Life Meaning Or Purpose: More time with 2 kids and family. Continuing to work and do the normal things.
Fears, Concerns, Worries: Worries about pain and controlling symptoms
Communication Preferences: Appreciates detail focused information. Uutilizes MyChart, telehealth as appropriate.
Role Of Spirituality, Faith, Religion, Spiritual Assessment:
Past Experience With Serious Illness/Hospice:
Acceptable Quality Of Life:

Advance Care Planning
FHCC ACP

Legal Next of Kin: Husband Mark
DPOAHC:
POLST:
Living Will/Advanced Directive:

Objective
GENERAL INFORMATION:
Care Team: Patient Care Team:
Paras, Leilani D, MD as PCP - General (Family Practice)
Purcell, William Thomas, MD as Oncologist (Hematology-Oncology)
Shepherd, Annemarie, MD (Radiation Oncology)
Kang, John, MD as Primary Contact (Radiation Oncology)
Symonds, Lynn Katherine, MD as Oncologist (Hematology-Oncology)

IMPORTANT CLINICAL HISTORY:
Imaging: 7/27/26 MRI C-T-L
IMPRESSION

1. No cord compression. Anterior epidural tumor extension at T5 and T8 levels
Diffuse osseous metastasis multiple cervical, thoracic and lumbar vertebral bodies. Pathologic fractures involving T4, T5 and T8 vertebral bodies with mild height loss at T5 (40%).

This is a preliminary report dictated by Abraham Mengstu M.D., neuroradiology fellow (PGY-6).

Unless an Attending Final Impression appears below, the report has not yet been finalized and an attending radiologist has not reviewed these images.
Pathology: 7/24/26 A) Right iliac crest, biopsy:
- Metastatic carcinoma.
Treatment History: Lupron + AI. Awaiting approval for Ribociclib.

Oncology History Overview Note

7/1/26: MRI T Spine
IMPRESSION:
Diffusely heterogeneous T1 hypointense and multifocal T2 hyperintense marrow signal including 2.3 x 2.3 cm expansile aneurysmal bone cyst like lesion in T5 vetebral body and similar lesions in T1, T8, T9, T10 and vertebral bodies, as well as 1.2 x 1.1 cm expansile T1 isointense, T2 hyperintense lesion in the posterior elements of T10. Additionally there is a 1.8cm ovoid T2 hyperintense mass in the visualized posterior right liver lobe. While multiple aneurysmal bone cysts is a small possibility, the appearance is highly concerning for metastases from unknown primary. Recommend CT chest, abdomena nd pelvis with contrast or PET/CT for further evaluation.
Compression deformities of T1, T4, T5 and T8 vertebral bodies which may be pathologic.
Mild bilateral neural foraminal narrowing at T8-9 secondary to bony expansion.

7/13/26: CT Chest
IMPRESSION
* Multiple osseous lytic lesions, as described, concerning for a neoplastic process.
* Fracture of the left 11th rib.
* A few scattered nodules, measuring up to 4 mm. In the context of a potential primary malignancy, a follow-up CT of the chest in 3 months is advised.

7/13/26: CT A/P
IMPRESSION
Diffuse lytic bone lesions throughout the spine and pelvis without CT evidence of primary malignancy in the abdomen or pelvis.
Small bilateral ovarian cysts would be better characterized on transvaginal ultrasound.

7/22/26 PET/MR: Lt breast lesion 3.3x2.4cm SUVmax 1.9 with Rt axillary node 9x8mm SUVmax 2.0. Innumerable bony foci including compression fractures of T4, T8, L5.

7/15/26 Dx imaging: ***Left*** Status post breast reduction. Left breast 9 mm x 7 mm x 11 mm mass at 1 o'clock with ill-defined heterogeneous tissue seen more medially. There is no definite mammographic correlate. Assessment: 4 - Suspicious finding. Left breast 7 mm x 4 mm x 7 mm oval circumscribed mass at 2 o'clock. Assessment: 3 - Probably benign Left breast normal-appearing intramammary lymph node at 2 o'clock. Assessment: 2 - Benign finding.
Right Status post breast reduction. Right breast 13 mm x 8 mm x 15 mm simple cyst at 5 o'clock. Assessment: 2 - Benign finding. At least three morphologically abnormal right axillary lymph nodes. Assessment: 4 - Suspicious finding.

7/21/26 PET/CT:
Mild to moderately FDG-avid lesion in the left lateral breast, concerning for a primary breast neoplasm. No left axillary lymphadenopathy or abnormal FDG uptake within the left axillary lymph nodes. Moderately FDG-avid right axillary lymph node, suspicious for metastatic involvement.
Innumerable markedly intense FDG-avid osseous lesions throughout the axial and appendicular skeleton, with associated compression fractures involving several vertebral bodies, consistent with widespread metastatic disease. * Given the markedly greater extent and intensity of skeletal FDG uptake relative to the left breast lesion, along with the absence of ipsilateral axillary nodal involvement, the pattern of metastatic disease is atypical for a breast primary, and an alternative primary malignancy should be considered.
* Mild to moderately avid left lateral breast lesion, possible neoplastic involvement. No left axillary lymphadenopathy or abnormal FDG uptake within the lymph nodes. * Moderately avid right axillary lymph node, concerning for metastatic.* Innumerable foci of intense FDG uptake involving axial and appendicular skeleton, with compression fractures of few vertebrae, likely metastatic. The intensity of the FDG uptake in the bone metastatic disease in comparison to the breast lesion and negative left lymph node involvement make it less likely to be originaria from the breast.
7/22/26 Left breast bx 1:00 7N: ILC G2 ER (91-100%) PR (91-100%) Her2 (1+) Ki67 21-30%
Right axillary LN: Metastatic carcinoma, Neoplastic cells are morphologically similar to the findings in part A, compatible with metastasis from breast primary
