7/24/26 Right iliac crest bx: metastatic carcinoma

7/27/26 CT Full spine * Extensive lytic osseous metastases involving multilevel vertebral bodies and posterior elements. Redemonstrated age-indeterminant mild pathologic fractures (<25% height loss) in the C4, C6, T1, T4, T5, T8, and L5 levels. Findings are grossly similar to the prior PET/MR. * No definite new evidence of significant vertebral fracture or subluxation. * Of

note, there are some extra-osseous extension involving left C4/5, left C6/7, and right T8/9 foraminal canals, and S1, S2/3 anterior epidural extension, resulting in spinal canal narrowing as described. Findings are similar to the 07/13/2026 abdominal CT. Consider MRI for evaluation of epidural/foraminal canal involvement if clinically warranted.* Of note, the left C4 and C6 lateral process involvement may involve the left V2 vertebral artery. Consider neck CTA to evaluate luminal patency if clinically warranted.

7/27/26 CT head/neck: Normal head CT. No acute infarct, hemorrhage or mass effect. Normal CTA head. No high-grade stenosis or occlusion. Normal CTA of the neck vessels. No stenosis, dissection or occlusion. Internal carotid artery origin stenosis by NASCET criteria: No significant stenosis by NASCET criteria
7/27/26 MRI Spine: No cord compression. Anterior epidural tumor extension at T5 and T8 levels
Diffuse osseous metastasis multiple cervical, thoracic and lumbar vertebral bodies. Pathologic fractures involving T4, T5 and T8 vertebral bodies with mild height loss at T5 (40%).

7/28/26 XR T spine: On the standing AP, lateral, and swimmer's views, skin metallic markers are noted at apparent levels of pain centered at the T1/2 level and the upper T7 level. The multiple lytic lesions throughout the thoracic spine are better visualized on the prior day CT but grossly stable again consistent with bony metastases without definite evidence of gross pathologic fracture. Again there is essential anatomic alignment on the lateral and frontal views. There are mild degenerative disc changes in the mid and lower thoracic spine.

7/28/26 Radiation Oncology consult inpt- plan to start radiation

7/29/26 Oncology consult inpt- start Lupron 7.5mg, anastrozole 1mg daily, zometa 4mg

7/29/26 Palliative radiation to C4-T11 800cGy in Fx

Secondary malignant neoplasm of bone (HCC)

PHYSICAL EXAMINATION:
General: No acute distress.
Respiratory: Respirations are non-labored.
Neurologic: Alert.
Cognition and Speech: Speech clear and coherent.
Psychiatric: Appropriate mood & affect.

I spent a total of 65 minutes for the patient's care on the date of the service.

Current Outpatient Medications:
• acetaminophen 325 MG tablet, Take 3 tablets by mouth every 8 hours. (Patient not taking: Reported on 7/31/2026), Disp: , Rfl:
• albuterol HFA 108 (90 Base) MCG/ACT inhaler, Inhale 2 puffs by mouth every 4 hours as needed for shortness of breath/ wheezing., Disp: , Rfl:
• anastrozole 1 MG tablet, Take 1 tablet by mouth daily., Disp: 30 tablet, Rfl: 0
• cholecalciferol 50 mcg (2,000 unit) capsule, Take 2 capsules by mouth daily., Disp: , Rfl:
• methocarbamol 750 MG tablet, Take 1 tablet by mouth every 6 hours as needed for muscle spasms., Disp: 30 tablet, Rfl: 0
• morphine ER 30 MG ER tablet, Take 1 tablet by mouth every 12 hours., Disp: 28 tablet, Rfl: 0
• naloxone 4 MG/0.1ML nasal spray, Use 1 spray in one nostril for suspected opioid overdose. Call 911. If unresponsive in 2 to 3 minutes, repeat with new naloxone nasal spray in opposite nostril. (Patient not taking: Reported on 7/31/2026), Disp: 2 each, Rfl: 0
• ondansetron 8 MG tablet, Take 1 tablet by mouth every 8 hours., Disp: 90 tablet, Rfl: 0
• oxyCODONE 10 MG tablet, Take 1-1.5 tablets by mouth every 3 hours as needed for moderate pain., Disp: 170 tablet, Rfl: 0
• polyethylene glycol 3350 17 g packet, Take 1 packet by mouth daily. Dissolve in 4-8 ounce water., Disp: , Rfl:
• prochlorperazine 10 MG tablet, Take 1 tablet by mouth every 6 hours as needed for nausea/vomiting., Disp: 50 tablet, Rfl: 0
• propranolol 10 MG tablet, Take 1 tablet by mouth daily., Disp: , Rfl:
• senna 8.6 MG tablet, Take 2 tablets by mouth 2 times a day., Disp: 120 tablet, Rfl: 0
• tretinoin 0.025 % cream, Apply 1 application topically 3 times a week. Apply to face., Disp: , Rfl:

FRED HUTCHINSON CANCER CENTER
BREAST ONCOLOGY NEW PATIENT VISIT

ID/CC: Patient is a 47 yo premenopausal woman presenting with de novo metastatic breast cancer (ER+/PR+/HER2-) with primarily bone involvement presenting today to establish care with breast oncology

ONCOLOGY HISTORY:
-February 2026: Developed back pain which got progressively worse
-7/1/26: MRI spine showed expansile lesions in T1, T5, T8-T10 with expansile element in T10
-7/13/26: CT chest/abdomen/pelvis showed diffuse bony lesions throughout spine and pelvis and left 11th rib fracture as well as a few scattered lung nodules.
-7/21/26: PET-CT w FDG lesions in L breast, R axilla, FDG avid osseous lesions, compression fracture.
-7/22/26: L breast core biopsy showed invasive lobular carcinoma, ER+ (91-100%), PR+ (91-100%), HER2- (1+ by IHC), Ki-67 21-30% , Right axilla LN biopsy showed metastatic carcinoma
-7/24/26: Right iliac crest biopsy showed metastatic carcinoma
-7/27/26-7/30/26: Admitted for pain control, she received palliative radiation with 800 cGy over 1 fraction to the right hip joint, started on lupron and anastrozole, also received zometa as an inpatient

HPI: Please see detailed oncology history above. We spent the majority of the visit reviewing the diagnosis and discussing treatment recommendations. Please see details in the assessment and plan.

ROS: Complete ROS was reviewed and was negative unless stated above in the HPI

ECOG: 0 (prior to diagnosis)

PMH
Medical History

Gynecology History:
Menopausal Status: premenopausal
HRT use: Denies
OCP use: Yes, from 18-33 then had IUDs (IUD recently removed)

•	ondansetron 8 MG tablet	Take 1 tablet by mouth every 8 hours.	90 tablet 0
•	oxyCODONE 10 MG tablet	Take 1-1.5 tablets by mouth every 3 hours as needed for moderate pain.	170 tablet 0
•	polyethylene glycol 3350 17 g packet	Take 1 packet by mouth daily. Dissolve in 4-8 ounce water.	
•	prochlorperazine 10 MG tablet	Take 1 tablet by mouth every 6 hours as needed for nausea/ vomiting.	50 tablet 0

•	propranolol 10 MG tablet	Take 1 tablet by mouth daily.		
•	senna 8.6 MG tablet	Take 2 tablets by mouth 2 times a day.	120 tablet	0
•	tretinoin 0.025 % cream	Apply 1 application topically 3 times a week. Apply to face.		

No facility-administered medications prior to visit.

ALLERGIES
Review of patient's allergies indicates:

Allergies

Allergen	Reactions	
•	Propofol	Palpitations and Other
		PVC's *Palpitation*
•	Fentanyl	Other
		Isolated PVCs

SOCIAL HISTORY: Accompanied today by her husband. She has two children ages 9 and 11.
EtOH:She drinks 1-2 drinks alcohol on a few to most nights of the week.
Tobacco: Never smoker
Recreational Drugs: Denies

FAMILY HISTORY
Family History

PHYSICAL EXAM

Vitals:

	08/03/26 1001
BP:	124/83
Pulse:	94

IMAGING

Imaging was reviewed and summarized above in the oncology history

PATHOLOGY

Left Breast Core biopsy and Right axillary lymph node 7/22/26 (copied from report)
A) Left breast, 1:00 7 cm FN, core biopsy:
- Invasive lobular carcinoma. See Synoptic Checklist.

B) Lymph node, right axilla, core biopsy:
- Metastatic carcinoma, See Comment.

COMMENT:
B) Neoplastic cells are morphologically similar to the findings in part A, compatible with metastasis from breast primary.

TUMOR	
Tumor Site	Clock position
	1 o'clock
Tumor Site	Distance from nipple (Centimeters): 7 cm
Histologic Type	Invasive carcinoma with features of: lobular
Histologic Grade (Nottingham Histologic Score)	
Glandular (Acinar) / Tubular Differentiation	Score 3
Nuclear Pleomorphism	Score 2
Mitotic Rate	Score 1
Overall Grade	Grade 2 (scores of 6 or 7)
Largest Invasive Focus in this Limited Biopsy Sample	7 mm
Ductal Carcinoma In Situ (DCIS)	Not identified
Lymphatic and / or Vascular Invasion	Not identified
Microcalcifications	Not identified
Breast Biomarker Studies (pending)	Biomarkers have been ordered and will be reported in an addendum.

Testing Performed on Specimen / Block Number(s)	A1
Test(s) Performed	
Estrogen Receptor (ER) Status	Positive (greater than 10% of cells demonstrate nuclear positivity)
Percentage of Cells with Nuclear Positivity	91-100%
Average Intensity of Staining	Strong (3+)
Test(s) Performed	
Progesterone Receptor (PgR) Status	Positive
Percentage of Cells with Nuclear Positivity	91-100%

Average Intensity of Staining	Strong (3+)
Test(s) Performed	
HER2 by Immunohistochemistry (IHC) Status	Negative (Score 1+)
	Incomplete membrane staining that is faint / barely perceptible and in greater than 10% of tumor cells
Test(s) Performed	
Ki-67 Proliferative Index	21-30%

ASSESSMENT/PLAN: Patient is a 47 yo premenopausal woman presenting with de novo metastatic breast cancer (ER+/PR+/ HER2-) with primarily bone involvement presenting today to establish care with breast oncology

#Breast Cancer: Patient presented with several months of back pain. An MRI on 7/1/26 showed expansile lesions in T1, T5, T8-T10. Subsequent CT chest/abdomen/pelvis on 7/13/26 showed diffuse bony lesions throughout spine and pelvis and left 11th rib fracture as well as a few scattered lung nodules. PET CT on 7/21/26 showed FDG avid lesions in L breast, R axilla, and bones. Left breast core biopsy on 7/22/26 showed invasive lobular carcinoma, ER+ (91-100%), PR+ (91-100%), HER2- (1+ by IHC), Ki-67 21-30%. Right axillaary LN biopsy showed metastatic carcinoma. Right iliac crest biopsy also showed metastatic carcinoma. She subsequently admitted for pain control and started on lupron+anastrozole. We reviewed today that this presentation is consistent with metastatic or stage IV breast cancer. We discussed the natural course and prognosis of metastatic breast cancer. I shared that metastatic breast cancer is considered incurable, it is treatable with a goal of improving both quantity of life and quality of life. We discussed that in this setting treatment primarily involves systemic treatment which is given on an ongoing basis until disease progression or intolerable side effects develop at which time we would switch to a new line of therapy provided there are reasonable options remaining that are within the patient's goals of care. Surgery and radiation would not be curative but are sometimes used to help manage symptoms. The recommendation for AI + CDK 4/6 inhibitor is based on multiple trials demonstrating superior efficacy compared with endocrine therapy alone. The PALOMA-2 trial demonstrated the combination of AI + Palbociclib was associated with improved PFS (24.8 versus 14.5 months; hazard ratio [HR] 0.58, 95% CI 0.46-0.72) and objective response rate (ORR; 42 versus 35 percent) compared with letrozole alone. The MONALEESA-2 trial of ribociclib plus letrozole showed a significant overall survival benefit as compared with placebo plus letrozole in patients with HR-positive, HER2-negative advanced breast cancer (63.9 months, 95% CI 52.4 to 71.0 with ribociclib plus letrozole vs 51.4 months, 95% CI 47.2 to 59.7 with placebo plus letrozole). The MONARCH3 trial demonstrated the combination of AI + abemaciclib was associated with improved PFS (28.2 months versus 14.8 months for those receiving placebo; HR 0.540, 95% CI: 0.418, 0.698) and objective response rate (ORR; 59 versus 44 percent) compared with letrozole alone. In summary, AI+CDK4/6 inhibitors are now standard of care for first line treatment of metastatic, ER+ positive/Her2- breast cancer. Given the side effect profile, we discussed proceeding with ribociclib. We discussed the potential SEs of ribociclib includes but is not limited to neutropenia, decreased blood counts, LFT changes, fatigue, QTc prolongation (which requires EKG monitoring) and rarely pneumonitis. We discussed evaluating disease response with scans q3 months; in her case I will recommend PET/CT in the setting of bone predominant disease.
-Continue lupron q4 weeks
-Continue anastrozole daily
-Plan to start ribociclib pending insurance authorization
-Repeat PET CT due November 2026
-Referrals for nutrition, SW, and childlife
-Will send next generation sequencing on tumor sample
-She scheduled to meet with palliative care tomorrow

#pain management:
-Regimen prescribed during her admission
- MS Contin 30 mg every 12 hours
- Oxycodone 15 mg every 3 hours as needed
- Tylenol 975 mg every 8 hours
- Methocarbamol 750 mg every 6 hours as needed
- Recommend daily bowel regimen
-s/p palliative RT

#Bone Mets: We discussed the data supporting the use of bisphosphonates in patients with bone metastasis to prevent fracture and decrease pain. The risk of ONJ and atypical femur fractures is low/unlikely at the doses given. Common side effects include arthralgias and fevers after the infusion.
-Continue zometa q4 weeks

#Genetics: Genetic testing recommended in the setting of metastatic breast cancer

Return: 2 weeks for start of ribociclib

Anti-Cancer Therapy Consent

I/we spoke with the patient about the proposed treatment regimen: Ribociclib
The purpose of this treatment is: Disease control – the goal is to improve quality of life and/or length of life, not to cure the cancer
Other options for treatment and their risks and benefits were discussed, including no treatment.
Potential side effects of therapy were discussed. These include, but are not limited to: Fatigue and Risk of Infection, Sores of Mouth and Throat, Change in Taste Sensation, Anorexia, Nausea/Vomiting, Constipation and Diarrhea, Neutropenia, Low Red Blood Cell Count/Anemia and Low Platelets and Risk of Bleeding, Skin Effects, Heart Effects, Lung Effects and Liver effects,
The patient had the opportunity to ask questions and expressed understanding of the proposed treatment and agrees to proceed. She may also receive written materials on the regimen schedule and toxicity and, if applicable, a chemotherapy teaching session with a nurse or pharmacist.

Telephone Encounter - Michaela O - 08/01/2026 3:01 PM PDT

Formatting of this note might be different from the original.

Oncology Telephone Triage Note

Subjective / Visit Information:

Reason for Call: Symptom Management (constipation)

Assessment and Plan:

Call Summary: patient contacted triage reporting several days of constipation with very small hard BM on Tuesday and Friday of this week. Taking large doses of narcotics, drinking 30mL fluid, not moving a ton. Reports she is taking senna 2 tabs BID and miralax once a day without relief. Passing gas and still eating, denied bloating/abdominal pain.

Action Taken: Provider Notified Hailey Bobin-Cole who recommended increasing miralax to BID and adding MOM, prune juice sprite/butter cocktail. If this addition does not work can use 1/2 bottle of magnesium citrate. Also discussed more consistent bowel regimen once she gets a successful movement, including increased fluids, more movement and addition of coconut milk to her diet. Instructed patient to contact us with any further questions/concerns if these suggestions are not fruitful, patient agreed to do so.

Response: Aware of existing appointments, Aware of clinic contact information, States understanding of plan, Restates plan, and No further questions

Additional documentation may exist in Flowsheets or Education Activity

Electronically signed by Michaela O at 08/01/2026 3:54 PM PDT

Medications - documented as of this encounter (statuses as of 11/18/2026)

Medication	Sig	Dispense Quantity	Last Filled	Start Date	End Date	Status
propranolol 10 MG tablet	Take 1 tablet by mouth daily.					Active
naloxone 4 MG/0.1ML nasal spray	Use 1 spray in one nostril for suspected opioid overdose. Call 911. If unresponsive in 2 to 3 minutes, repeat with new naloxone nasal spray in opposite nostril.	2 each		07/27/2026	07/27/2027	Active
albuterol HFA 108 (90 Base) MCG/ACT inhaler	Inhale 2 puffs by mouth every 4 hours as needed for shortness of breath/ wheezing.					Active
tretinoin 0.025 % cream	Apply 1 application topically 3 times a week. Apply to face.					Active
cholecalciferol 50 mcg (2,000 unit) capsule	Take 2 capsules by mouth daily.					Active
polyethylene glycol 3350 17 g packet	Take 1 packet by mouth daily. Dissolve in 4-8 ounce water.					Active
acetaminophen 325 MG tablet	Take 3 tablets by mouth every 8 hours.			07/30/2026		Active
oxyCODONE 10 MG tablet	Take 1-1.5 tablets by mouth every 3 hours as needed for moderate pain.	170 tablet		07/30/2026	08/10/2026	Discontinued (Reorder)
morphine ER 30 MG ER tablet	Take 1 tablet by mouth every 12 hours.	28 tablet		07/30/2026	08/07/2026	Discontinued (Reorder)
anastrozole 1 MG tablet	Take 1 tablet by mouth daily.	30 tablet		07/30/2026	08/21/2026	Discontinued (Reorder)
methocarbamol 750 MG tablet	Take 1 tablet by mouth every 6 hours as needed for muscle spasms.	30 tablet		07/30/2026	08/10/2026	Discontinued (Reorder)
ondansetron 8 MG tablet	Take 1 tablet by mouth every 8 hours.	90 tablet		07/30/2026	08/29/2026	Expired
senna 8.6 MG tablet	Take 2 tablets by mouth 2 times a day.	120 tablet		07/30/2026	08/29/2026	Expired
prochlorperazine 10 MG tablet	Take 1 tablet by mouth every 6 hours as needed for nausea/vomiting.	50 tablet		07/30/2026	08/21/2026	Discontinued (Reorder)

Active Problems - documented as of this encounter (statuses as of 11/18/2026)

Problem	Noted Date	Diagnosed Date
Acute bilateral thoracic back pain	07/28/2026	
Pathologic compression fracture of vertebra	07/28/2026	
Secondary cancer	07/28/2026	
Cancer, metastatic to bone	07/28/2026	
Neck pain	07/27/2026	
Cancer related pain	07/27/2026	
Breast cancer metastasized to bone, unspecified laterality	07/27/2026	
Secondary malignant neoplasm of bone	07/22/2026

Miscellaneous Notes - documented in this encounter

Telephone Encounter - Jennifer W - 07/31/2026 9:07 AM PDT

Formatting of this note might be different from the original.

Pre-Visit Call Attempt: Jennifer R Wulff, RN of FHCC Nurse Navigation reviewed the chart and updated the onc hx. Intake has been previously completed 7/13/26 by S. Christensen.

Documentation only:

Oncologic History:

Oncology History Overview

7/1/26: MRI T Spine

IMPRESSION:

Diffusely heterogeneous T1 hypointense and multifocal T2 hyperintense marrow signal including 2.3 x 2.3 cm expansile aneurysmal bone cyst like lesion in T5 vetebral body and similar lesions in T1, T8, T9, T10 and vertebral bodies, as well as 1.2 x 1.1 cm expansile T1 isointense, T2 hyperintense lesion in the posterior elements of T10. Additionally there is a 1.8cm ovoid T2 hyperintense mass in the visualized posterior right liver lobe. While multiple aneurysmal bone cysts is a small possibility, the appearance is highly concerning for metastases from unknown primary. Recommend CT chest, abdomena nd pelvis with contrast or PET/CT for further evaluation.

Compression deformities of T1, T4, T5 and T8 vertebral bodies which may be pathologic.

Mild bilateral neural foraminal narrowing at T8-9 secondary to bony expansion.

7/13/26: CT Chest

IMPRESSION

* Multiple osseous lytic lesions, as described, concerning for a neoplastic process.
* Fracture of the left 11th rib.
* A few scattered nodules, measuring up to 4 mm. In the context of a potential primary malignancy, a follow-up CT of the chest in

3 months is advised.

7/13/26: CT A/P
IMPRESSION
Diffuse lytic bone lesions throughout the spine and pelvis without CT evidence of primary malignancy in the abdomen or pelvis. Small bilateral ovarian cysts would be better characterized on transvaginal ultrasound.

7/22/26 PET/MR: Lt breast lesion 3.3x2.4cm SUVmax 1.9 with Rt axillary node 9x8mm SUVmax 2.0. Innumerable bony foci including compression fractures of T4, T8, L5.

7/15/26 Dx imaging: ***Left*** Status post breast reduction. Left breast 9 mm x 7 mm x 11 mm mass at 1 o'clock with ill-defined heterogeneous tissue seen more medially. There is no definite mammographic correlate. Assessment: 4 - Suspicious finding. Left breast 7 mm x 4 mm x 7 mm oval circumscribed mass at 2 o'clock. Assessment: 3 - Probably benign Left breast normal-appearing intramammary lymph node at 2 o'clock. Assessment: 2 - Benign finding.
Right Status post breast reduction. Right breast 13 mm x 8 mm x 15 mm simple cyst at 5 o'clock. Assessment: 2 - Benign finding. At least three morphologically abnormal right axillary lymph nodes. Assessment: 4 - Suspicious finding.

7/21/26 PET/CT:
Mild to moderately FDG-avid lesion in the left lateral breast, concerning for a primary breast neoplasm. No left axillary lymphadenopathy or abnormal FDG uptake within the left axillary lymph nodes. Moderately FDG-avid right axillary lymph node, suspicious for metastatic involvement.
Innumerable markedly intense FDG-avid osseous lesions throughout the axial and appendicular skeleton, with associated compression fractures involving several vertebral bodies, consistent with widespread metastatic disease. * Given the markedly greater extent and intensity of skeletal FDG uptake relative to the left breast lesion, along with the absence of ipsilateral axillary nodal involvement, the pattern of metastatic disease is atypical for a breast primary, and an alternative primary malignancy should be considered.
* Mild to moderately avid left lateral breast lesion, possible neoplastic involvement. No left axillary lymphadenopathy or abnormal FDG uptake within the lymph nodes. * Moderately avid right axillary lymph node, concerning for metastatic.* Innumerable foci of intense FDG uptake involving axial and appendicular skeleton, with compression fractures of few vertebrae, likely metastatic. The intensity of the FDG uptake in the bone metastatic disease in comparison to the breast lesion and negative left lymph node involvement make it less likely to be originaria from the breast.
7/22/26 Left breast bx 1:00 7N: ILC G2 ER (91-100%) PR (91-100%) Her2 (1+) Ki67 21-30%
Right axillary LN: Metastatic carcinoma, Neoplastic cells are morphologically similar to the findings in part A, compatible with metastasis from breast primary

7/24/26 Right iliac crest bx: metastatic carcinoma

7/27/26 CT Full spine * Extensive lytic osseous metastases involving multilevel vertebral bodies and posterior elements. Redemonstrated age-indeterminant mild pathologic fractures (<25% height loss) in the C4, C6, T1, T4, T5, T8, and L5 levels. Findings are grossly similar to the prior PET/MR. * No definite new evidence of significant vertebral fracture or subluxation. * Of note, there are some extra-osseous extension involving left C4/5, left C6/7, and right T8/9 foraminal canals, and S1, S2/3 anterior epidural extension, resulting in spinal canal narrowing as described. Findings are similar to the 07/13/2026 abdominal CT. Consider MRI for evaluation of epidural/foraminal canal involvement if clinically warranted.* Of note, the left C4 and C6 lateral process involvement may involve the left V2 vertebral artery. Consider neck CTA to evaluate luminal patency if clinically warranted.

7/27/26 CT head/neck: Normal head CT. No acute infarct, hemorrhage or mass effect. Normal CTA head. No high-grade stenosis or occlusion. Normal CTA of the neck vessels. No stenosis, dissection or occlusion. Internal carotid artery origin stenosis by NASCET criteria: No significant stenosis by NASCET criteria
7/27/26 MRI Spine: No cord compression. Anterior epidural tumor extension at T5 and T8 levels
Diffuse osseous metastasis multiple cervical, thoracic and lumbar vertebral bodies. Pathologic fractures involving T4, T5 and T8 vertebral bodies with mild height loss at T5 (40%).

7/28/26 XR T spine: On the standing AP, lateral, and swimmer's views, skin metallic markers are noted at apparent levels of pain centered at the T1/2 level and the upper T7 level. The multiple lytic lesions throughout the thoracic spine are better visualized on the prior day CT but grossly stable again consistent with bony metastases without definite evidence of gross pathologic fracture. Again there is essential anatomic alignment on the lateral and frontal views. There are mild degenerative disc changes in the mid and lower thoracic spine.

7/28/26 Radiation Oncology consult inpt- plan to start radiation

7/29/26 Oncology consult inpt- start Lupron 7.5mg, anastrozole 1mg daily, zometa 4mg

7/29/26 Palliative radiation to C4-T11 800cGy in Fx

INTERVENTIONAL RADIOLOGY OUTPATIENT CONSULT NOTE

REFERRING PHYSICIAN

Amin Gautam, MD

IDENTIFICATION AND CHIEF COMPLAINT

Yvonne K Franklin is a 47 year old female patient who is referred to interventional radiology for consideration of treatment options for Vertebral Augmentation.

HISTORY OF PRESENT ILLNESS -The history is from the patient as well as from review of medical records.

Pt was recently admitted for pain control of significant metastatic disease. MRI demonstrates spinal metastases with several levels of compression fractures of varying acuity. No surgical intervention was indicated per NSGY, and patient was discharged following adequate pain control. She has received outpatient radiation therapy yesterday, which she tolerated well.

PAST MEDICAL HISTORY

Active Ambulatory Problems

	Diagnosis	Date Noted
•	Secondary malignant neoplasm of bone (HCC)	07/22/2026
•	Neck pain	07/27/2026
•	Cancer related pain	07/27/2026
•	Breast cancer metastasized to bone, unspecified laterality (HCC)	07/27/2026
•	Acute bilateral thoracic back pain	07/28/2026
•	Pathologic compression fracture of vertebra (HCC)	07/28/2026
•	Metastatic malignant neoplasm (HCC)	07/28/2026
•	Cancer, metastatic to bone (HCC)	07/28/2026

Resolved Ambulatory Problems

	Diagnosis	Date Noted
•	No Resolved Ambulatory Problems	

Past Medical History:

Diagnosis	Date	
•	Breast cyst	Always

SOCIAL HISTORY

Social History

Tobacco Use		
•	Smoking status:	Never
•	Smokeless tobacco:	Not on file
Substance Use Topics		
•	Alcohol use:	Not Currently

FAMILY HISTORY

Family History

Problem (# of Occurrences)	Relation (Name,Age of Onset)
Colon Cancer (1)	**Maternal Grandmother**

Negative family history of: **Breast Cancer, Ovarian Cancer**

REVIEW OF SYSTEMS
A complete review of systems is negative except as above.

ALLERGIES
Review of patient's allergies indicates:

Allergies

Allergen	Reactions	
•	Propofol	Palpitations and Other
		PVC's *Palpitation*
•	Fentanyl	Other
		Isolated PVCs

PHYSICAL EXAMINATION
BP 98/61 | Pulse 100 | Temp 36.5 °C (Temporal) | Wt 57.5 kg (126 lb 11.2 oz) | SpO2 99% | BMI 21.08 kg/m²
General: Patient appears in no acute distress
Spine: Mildly tender in the lower cervical spine, no significant thoracic tenderness.
Neurologic: Alert, oriented, and appropriate.

IMAGING STUDIES
[image][image]

ASSESSMENT AND PLAN
Yvonne K Franklin is a 47 year old female with recently diagnosed metastatic breast cancer and extensive spinal metastases. Since receiving radiation therapy, she has improved in regards to her pain with less acute, sharp pain at the level of T8 as recently localized, despite the appearance of compression fractures near and at this level.. She has had adequate pain control with oral medication, though notes persistent pain despite that throughout her full spine, most prominently of the cervical spine.

The pain does not localize as well to the mid and lower thoracic vertebrae, therefore vertebral augmentation is deferred for now. The areas of pain in her cervical spine were explained to be inaccessible in regards to kyphoplasty. Recommended use of cervical collar/brace for pain and protection.

Will follow-up in approx 3 weeks in clinic to assess for need for kyphoplasty at that time.

Thomas Perez, MD
I saw and evaluated the patient and agree with Dr.Perez's note.

Patient was seen jointly with Dr. Som in the IR clinic.

Electronically signed by Thomas Perez at 07/31/2026 6:05 PM PDT
Electronically signed by Sandeep Vaidya at 08/05/2026 10:27 PM PDT

Weekly On Treatment Visit - John Kang - 07/29/2026 4:15 PM PDT

Formatting of this note might be different from the original.

[image][image]

Radiation Oncology
On Treatment Visit

Yvonne K Franklin is a 47 year old with metastatic Lt breast cancer diffusely to bone with lesions along the entire spinal axis with diffuse T-spine pain (index lesions C4, C6, T1, T4, T5, T8 with compression fractures <25%)

3D CRT to Right Hip joint

	Treatment Period	Technique	Fraction Dose	Fractions	Total Dose
Course 1	7/29/2026–7/29/2026 *(days: 1)*				
C-spine, T-spine	7/29/2026–7/29/2026	Conformal Plan	800 / 800 cGy	1 of 1	800 / 800 cGy

	7/29/2026 12:00 AM	7/30/2026 12:00 AM
Chemotherapy		
Anastrozole	Take 1 tablet by mouth daily. [image:Medication marked as long-term]	
Anastrozole		Take 1 tablet by mouth daily. [image:Medication marked as long-term]
Anastrozole	1 mg, Oral, Daily	
Leuprolide Acetate	7.5 mg, Intramuscular, Once	

[image:Medication marked as long-term] Medication marked as long-term

Last Recorded Vitals
There were no vitals filed for this visit.

Wt Readings from Last 5 Encounters:	
07/28/26	57.2 kg (126 lb 1.7 oz)
07/27/26	57.1 kg (125 lb 12.8 oz)
07/21/26	55.7 kg (122 lb 12.7 oz)
07/15/26	56.7 kg (125 lb)

Subjective
She presents with her spouse Mark. She has no side effects attributable to radiation.

I discussed we are treating C4 to T11 with a single palliative dose with the intent for pain control and allowing my IR colleagues to better localize areas for stabilization. We may need a few weeks for pain control.

Objective
On hospital bed
No acute distress
No increased work of breathing

Lab Results

Component	Value	Date	
	WBC	6.89	07/30/2026
	Neutrophils	7.35 (H)	07/27/2026

Overall Cognitive Status	WFL	07/28/2026 2:40 PM PDT	Mary Pat Dodge

Self-Care/Home Management

Question	Answer	Date of Assessment	Author
ADL Comments	Yvonne's primary trigger for pain from a functional standpoint is getting in and out of bed, as in her head descent to gravity. She is also unable to tolerate laying flat. OT provided education in options including use of bed wedge(s) vs 1st floor hospital bed. Also demonstrated how spouse Mark can provided physical assist at her head/ neck while she transitions from sitting > supine. Yvonne describes log rolling to manage pain and OT built upon that strategy to include no bending/ lifting/ twisting in her day. Ordered 3 different cervical collars for patient to try and explained the mechanism of soft support.	07/28/2026 2:40 PM PDT	Mary Pat Dodge
Toileting	Independent	07/28/2026 2:40 PM PDT	Mary Pat Dodge

Transfers

Functional Mobility

Question	Answer	Date of Assessment	Author
Distance	within the room independently and ambulates with spouse Mark with arms linked together	07/28/2026 2:40 PM PDT	Mary Pat Dodge

OT Assessment

Question	Answer	Date of Assessment	Author
OT Assessment Results	Impaired IADL's	07/28/2026 2:40 PM PDT	Mary Pat Dodge
Impact on Function and Participation	Upon interview, Yvonne is and has been able to complete bathing, toielting, dressing and self care on her own but struggles with IADLs that include any lifting or bending. OT provided education in maintaining a neutral spine and gave ideas for strategies and supplies to support her painful neck area during bed mobility. Will follow up as needed for usefulness of cervical collars and justify a hospital bed as needed.	07/28/2026 2:40 PM PDT	Mary Pat Dodge
Functional Prognosis	Good	07/28/2026 2:40 PM PDT	Mary Pat Dodge
Barriers to Discharge	none anticipated	07/28/2026 2:40 PM PDT	Mary Pat Dodge

Question	Answer	Date of Assessment	Author

Discharge Summary

Yvonne K Franklin ("Yvonne") - DOB: 6/17/1979 (47 year old female)
Gender Identity: Female Pronouns: she/her/hers
PCP: Paras, Leilani D, MD
Code Status: Full Code

DATE OF ADMISSION: 7/27/2026
DATE OF DISCHARGE: 07/30/26
DISCHARGE TEAM & ATTENDING: Medicine O Gen Adults & Lenaeus, Michael Jeffrey*

ADMISSION DIAGNOSIS: Stage IV breast cancer with osseous metastases
DISCHARGE DIAGNOSIS: Stage IV breast cancer with osseous metastases

PROBLEMS ADDRESSED DURING THIS HOSPITALIZATION:
Principal Problem:
Breast cancer metastasized to bone, unspecified laterality (HCC)
Active Problems:
Acute bilateral thoracic back pain
Pathologic compression fracture of vertebra (HCC)
Metastatic malignant neoplasm (HCC)
Cancer, metastatic to bone (HCC)
Resolved Problems:
* No resolved hospital problems. *

DISCHARGE FOLLOW-UP VISITS/APPOINTMENTS:
Upcoming appointments at UW Medicine:

Future Appointments

Date	Time	Provider	Department	Center
7/31/2026	3:00 PM	Vaidya, Sandeep Satyendra, MBBS	UWS IR	UWMC SURGICA

Additional follow-up:
No follow-up provider specified.

PENDING RESULTS THAT REQUIRE FOLLOW-UP (*as of this summary*)**:**
Pending Labs
No pending labs

DIAGNOSTIC STUDIES RECOMMENDED:
None

INCIDENTAL FINDINGS THAT REQUIRE FOLLOW-UP:

None

THERAPEUTIC RECOMMENDATIONS:
- Continue pain management regimen as outlined:
  - MS Contin 30 mg every 12 hours
  - Oxycodone 15 mg every 3 hours as needed
  - Tylenol 975 mg every 8 hours
  - Methocarbamol 750 mg every 6 hours as needed
- Cancer therapy as outlined below:
  - Lupron 7.5 mg monthly injections
  - Zometa 4mg infusions every 3-4 weeks
  - Anastrozole 1 mg daily
- Recommend daily bowel regimen
- Follow up with outpatient breast oncology and FHCC pain clinic for further management (referrals pending).
- Follow up with interventional radiology for outpatient kyphoplasty procedure. Appointment scheduled 7/31.
- Follow up with primary care provider within 2 weeks of discharge.

ALLERGIES:
Propofol and Fentanyl

DISCHARGE MEDICATIONS:
Medication List

START taking these medications

acetaminophen 325 MG tablet
Commonly known as: Tylenol
Take 3 tablets by mouth every 8 hours.

anastrozole 1 MG tablet
Commonly known as: Arimidex
Take 1 tablet by mouth daily.

methocarbamol 750 MG tablet
Commonly known as: Robaxin
Take 1 tablet by mouth every 6 hours as needed for muscle spasms.

morphine ER 30 MG ER tablet
Commonly known as: MS Contin
Take 1 tablet by mouth every 12 hours.

ondansetron 8 MG tablet
Commonly known as: Zofran
Take 1 tablet by mouth every 8 hours.

senna 8.6 MG tablet
Commonly known as: Senokot
Take 2 tablets by mouth 2 times a day.

CHANGE how you take these medications

oxyCODONE 10 MG tablet
Take 1-1.5 tablets by mouth every 3 hours as needed for moderate pain.
What changed:
- **medication strength**
- **how much to take**
- **when to take this**

CONTINUE taking these medications

albuterol HFA 108 (90 Base) MCG/ACT inhaler
Commonly known as: Proventil HFA; Ventolin HFA
Inhale 2 puffs by mouth every 4 hours as needed for shortness of breath/wheezing.

cholecalciferol 50 mcg (2,000 unit) capsule
Commonly known as: Vitamin D-3
Take 2 capsules by mouth daily.

naloxone 4 MG/0.1ML nasal spray
Commonly known as: Narcan
Use 1 spray in one nostril for suspected opioid overdose. Call 911. If unresponsive in 2 to 3 minutes, repeat with new naloxone nasal spray in opposite nostril.

polyethylene glycol 3350 17 g packet
Commonly known as: Miralax
Take 1 packet by mouth daily. Dissolve in 4-8 ounce water.

prochlorperazine 10 MG tablet
Commonly known as: Compazine
Take 1 tablet by mouth every 6 hours as needed for nausea/vomiting.

propranolol 10 MG tablet
Commonly known as: Inderal
Take 1 tablet by mouth daily.

tretinoin 0.025 % cream
Commonly known as: Retin-A
Apply 1 application topically 3 times a week. Apply to face.

STOP taking these medications
ALPRAZolam 0.25 MG tablet
Commonly known as: Xanax

Phone: 425-821-0708

- anastrozole 1 MG tablet
- methocarbamol 750 MG tablet
- ondansetron 8 MG tablet
- senna 8.6 MG tablet

You can get these medications from any pharmacyBring a paper prescription for each of these medications
- morphine ER 30 MG ER tablet
- oxyCODONE 10 MG tablet

BRIEF ADMISSION HISTORY:
As below

HOSPITAL COURSE:
Brief Admission History:
Per the admission note by Dr. Adrian Lazarevic-Fogelquist dated 7/28/2026:
"*Undergoing outpatient workup for presumed metastatic breast cancer (breast/LN biopsy results 7/27 confirm breast cancer, pending bone biopsy results). The night preceding admission developed acute worsening of neck and back pain to the point of being awoken from sleep and unable to bend or perform standard ADLs 2/2 severe, 10/10 pain unresponsive to home oxycodone 5-10mg. Pain is in the R neck and bilateral paraspinal regions, primarily in the upper/thoracic spine, worse with movement and associated with a feeling of "heaviness" in her head as if she cannot hold her head up due to pain/weakness in her neck.*
She was seen in Radiation Oncology on 7/27 for CT sim for XRT planning and then presented to ACE clinic for severe pain and was recommended to proceed to the ED for neurosurgical evaluation given severity of neck pain and known C spine metastases.
No fevers, chills, new neurologic symptoms of focal weakness, numbness, tingling, loss of bowel/bladder control.
ED course:
Afebrile, VS notable for tachycardia and transient hypertension. Labs with mild hypokalemia and leukocytosis, otherwise unremarkable. CT spine demonstrated multiple osseous metastases with multiple associated pathologic fractures in the cervical and thoracic spine and extra-osseous extension of lesions in the C-spine (e.g. C4, C6) with associated foraminal narrowing. CTA head and neck without e/o arterial dissection or occlusion.

Admitted to medicine for pain control and possible expedited XRT."

Hospital Course:
Yvonne K Franklin is a 47-year-old female with newly diagnosed metastatic breast cancer, ER+/PR+/HER2-, who was admitted to UWMC on 7/27 for intractable cancer-related neck/back pain in setting of known osseous metastases as well as possible expedited initiation of XRT. She was previously undergoing outpatient planning for XRT with CT sim completed on 7/27. Neurosurgery was consulted in the ED, determined to be non-operative.

She was continued on home oxycodone 5-10mg every 4 hours as needed together with scheduled Tylenol 975 mg, prn IV hydromorphone, and prn methocarbamol with good pain control. On 7/28, morphine 30mg BID was initiated along with continued prn medications. On 7/29, oxycodone was increased to 15mg every 3 hours as needed with improved pain relief. She was also given scheduled anti-emetics to help with opioid-associated nausea.

MRI C-T-L on 7/28 notable for anterior epidural tumor extension at T5 and T8 levels. Diffuse osseous metastasis multiple cervical, thoracic and lumbar vertebral bodies**.** Pathologic fractures involving T4, T5 and T8 vertebral bodies with mild height loss at T5 (40%).

Radiation oncology was consulted 7/28 with plan for expedited XRT as inpatient. XRT was administered on 7/29.

IR was consulted 7/28, planning for vertebroplasty/kyphoplasty following radiation treatment in outpatient setting. Follow-up consultation is scheduled for 7/31.

Medical oncology consulted 7/28 and saw pt on 7/29 to discuss hormone therapy initiation. Pt was started on lupron 7.5 mg monthly injections (first dose administered 7/29), anastrozole 1 mg daily, and Zometa 4mg every 3-4 wk infusions (first dose administered 7/30).

Over course of hospitalization, her pain was better controlled. She was discharged in stable condition on 7/30. She will follow up with oncology in the outpatient setting for ongoing cancer therapy and opioid management.

Key Diagnostic Studies:
7/22 biopsy ER+/PR+/HER2 neg

Procedures/Dates:
None

Tube/Line/Drain Care Orders / Instructions:
None

Consults:
Neurosurgery
IR
Rad Onc
Oncology Consults

Key Follow-up Needed, including Incidental Findings:
Follow up with FHCC breast oncology (referral placed) and FHCC pain clinic for opioid management
Follow up with IR for kyphoplasty as outpatient

DISPOSITION:
01 HOME/SELF CARE [01]

CONDITION: fair

CONSULTS COMPLETED:
IP CONSULT TO RADIATION ONCOLOGY
IP CONSULT TO NEUROSURGERY
IP CONSULT TO NUTRITION SERVICES
IP CONSULT TO ONCOLOGY

OPERATIONS/PROCEDURES:
No surgeries this admission

Additional procedures:
None

PRINCIPAL DIAGNOSTIC STUDIES/RESULTS:
MRI C-T-L 7/28/26:
1. No cord compression. Anterior epidural tumor extension at T5 and T8 levels
Diffuse osseous metastasis multiple cervical, thoracic and lumbar vertebral bodies. Pathologic fractures involving T4, T5 and T8 vertebral bodies with mild height loss at T5 (40%).

A) Right iliac crest, biopsy 7/24/26:
- Metastatic carcinoma.

A) Left breast, 1:00 7 cm FN, core biopsy 7/22/26:
- Invasive lobular carcinoma. See Synoptic Checklist.

B) Lymph node, right axilla, core biopsy 7/22/26:
- Metastatic carcinoma, See Comment.

COMMENT:
B) Neoplastic cells are morphologically similar to the findings in part A, compatible with metastasis from breast primary.

Biomarker reporting: ER positive, PR positive, HER2 negative. Negative E-cadherin supports lobular phenotype.

MEDICAL STUDENTS
I was present with the medical student(s). I personally performed the physical examination and medical decision making. I have verified all of the medical student(s)'s documentation for this encounter.

I spent more than 30 minutes on hospital discharge day management.

Discharge Instructions - documented in this encounter

Discharge Instructions
Mike Lenaeus - 07/30/2026 8:32 AM PDT
Formatting of this note might be different from the original.
You will be receiving a call to schedule your breast oncology clinic appointment after discharge. You can also call 206-606-2016 to schedule your appointment.

You have also received a referral to the Fred Hutch Pain Clinic, which will ultimately prescribe your pain medication, in consultation with your oncologist and your primary care doctor. It can, sometimes, take time to get enrolled in that clinic - so please reschedule your PCP follow-up within two weeks to ensure your pain is managed and you avoid side effects while getting enrolled in the pain clinic. Please make sure to have regular BMs while on opioid pain medication. We have prescribed miralax and senna to that end, but you should contact your PCP and/or the pain clinic if not having regular, loose BMs. If you're pain becomes intolerable or you cannot swallow - then please return to our ED for further evaluation.

Your PCP and pain clinic can discuss driving restrictions in more detail as you recover, but do not drive while on pain medications for now.

Physical Therapy Discharge

Yvonne K Franklin
U4772842

7/30/2026
Duration of session: 10 Minutes

Subjective
Patient Report/Self-Assessment: Agreeable to PT, hoping to discharge today

Functional Level:
Bed Mobility

Supine to Sit: Independent
Sit to Supine: Independent
Transfers
Sit<>Stand: Independent
Ambulation
Distance: Within room
Assistance Needs: Independent
Assistive Device Used: Front wheeled walker
Gait quality/descriptors: Narrow BOS;Decreased pace;Decreased step length

Interventions:
Therex:
Theract: Pt reports recently has been holding onto spouse while walking in hospital. Edu on safe walker use, sizing, ordering. Politely declined to practice steps
Balance/Neuro Re-ed:
Gait Training:

ASSESSMENT/PLAN
Yvonne is looking forward to discharging later today, reports she has been holding onto spouses arm for stability when walking lately, agreeable that walker would be beneficial for home. Ordered FWW, edu on safe use and sizing. Pt politely declined to practice steps. No further acute PT needs

Recommend a **personal ride** for transportation as the patient is able to demonstrate a transfer as needed to access their vehicle, as well as positioning tolerance to manage the ride time/distance at discharge.

Barriers to Discharge: None

Discharge Equipment: FWW

Justification for Ambulatory Assistive Device

Diagnosis: R26.81 impaired balance and M62.81 generalized weakness

Length of Need: >6 Months

Assistive Device: Yvonne requires a **FWW** for safe ambulation and transfers within the home. Without this equipment Yvonne is at risk for falls and injury. There is not a lesser restrictive device that would serve Yvonne's safety and mobility needs. Yvonne has demonstrated safe use of this equipment during this or previous PT sessions.

Goals:
Goal: Bed mobility, Independent (Flat mattress, no railing)
Estimated Completion Date: 08/15/26
Goal: Amb with AD, Independent
Estimated Completion Date: 08/15/26
Goal: Stairs, Supervision / Stand by assistance (x1 flight)
Estimated Completion Date: 08/15/26

PT Plan of Care:
Discharge acute care physical therapy. Please re-order therapy if the patient has a change in status, and therapy interventions are needed again.

Other Recommendations:
Recommendation for further PT: Outpatient PT
PT Daily Recommendations: Walking in hallway 2-3x daily

Kelly Whitney, PT

Discharge Planning Assessment

Patient summary:"47 year old female with newly diagnosed stage IV breast cancer not on any systemic therapy with metastatic disease to spine presenting with rapidly progressive pain and inability to perform ADLs. Admitted for pain control and expedited inpatient initiation of palliative XRT for pain control. "

Denies HH services history.
Provided Planning Your Home Discharge flyer.

Visit Information:
Patient is a 47 yrs female admitted on 7/27/2026 for Breast cancer metastasized to bone, unspecified laterality (HCC).
Discharge Planning Assessment Type: Discharge Planning Assessment (Face-to-Face) (a friend and her husband at bedside)
Is an interpreter used:: No
Is this a planned admission: No, Admission Source: Admitted through ED
Did pt/family decline dc planning evaluation/assistance? No

Living Situation Prior to Admit:
Living Situation Prior to Admission: Home with family/support (lives with her husband and 2 minor-aged children)

Pt reports that they felt their needs were met in living situation: Yes
Home Accessibility Concerns: Stairs/number at home (2 story home, 2 ste, 20 stairs+HR up to bedrooms, walk-in shower with built-in bench)
Primary Caregiver: Self
Support System: Spouse/significant other;Family members;Friends/neighbors
Physical/Cognitive/Functional History: No Limitations
Access to Healthcare Prior to Admit:No/minimal barriers to healthcare
Activities of Daily Living Prior to Admission:
PTA-Independent with ADLs?: Yes
PTA-Memory Adequate to Safely Complete Daily Activities: Yes
PTA- Adequate self-medication management: Yes
PTA-Patient Able to Express Needs/Desires: Yes
PTA-Dressing: Independent
PTA-Feeding: Independent
PTA-Bathing: Independent
PTA-Toileting: Independent
PTA-In/Out Bed: Independent
PTA-Walks in Home: Independent
PTA-Ambulates in Community: Independent
PTA-Assistive Devices: Wheelchair (manual wc)

Progress Note

Yvonne K Franklin ("Yvonne") - DOB: 6/17/1979 (47 year old female)
Gender Identity: Female Pronouns: she/her/hers
Admit Date: 7/27/2026
Code Status: Full Code

CHIEF CONCERN / IDENTIFICATION:
Yvonne K Franklin is a 47 year old female with newly diagnosed stage IV breast cancer not on any systemic therapy with metastatic disease to spine presenting with rapidly progressive neck/back pain, admitted for pain control and expedited XRT.

SUBJECTIVEINTERVAL HISTORY:
Pt endorses increased pain overnight as well as mid-morning today. Her pain is present throughout the day, not specific to particular time, but does generally seem worse at night/with reclined position. Evaluated at ~11am, and she reported significant pain (~2 hrs since last oxycodone dose). She does not feel that ER morphine has been helping since this was initiated yesterday PM. She also has been experiencing nausea 2/2 oxycodone and IV hydromorphone use, currently receiving IV anti-emetics.

SCHEDULED MEDICATIONS:
• acetaminophen, 975 mg, q8h SCH
• cholecalciferol, 4,000 units, Daily
• enoxaparin, 40 mg, q HS
• morphine ER, 30 mg, q12h SCH
• polyethylene glycol 3350, 17 g, Daily
• propranolol, 10 mg, Daily
• senna, 17.2 mg, BID

INFUSED MEDICATIONS:
?

PRN MEDICATIONS:
• albuterol HFA, 2 puff, q4h PRN
• HYDROmorphone, 0.5-1 mg, q4h PRN
• melatonin, 3 mg, q HS PRN
• methocarbamol, 750 mg, q6h PRN
• ondansetron, 4 mg, q8h PRN
• ondansetron, 4 mg, q8h PRN
• oxyCODONE, 5-10 mg, q4h PRN
• prochlorperazine, 10 mg, q6h PRN
• prochlorperazine, 10 mg, q6h PRN

OBJECTIVE
?

T: 37.2 °C (07/29/26 0530) **BP:** 107/61 (07/29/26 0530) **HR:(!) 111** (07/29/26 0530)
RR: 18 (07/29/26 0530) **SpO2:** 95 % (07/29/26 0530) Room air
T range: Temp Min: 36.4 °C Max: 38.1 °C
Admit weight: 57.2 kg (126 lb 1.7 oz) (07/28/26 0034)
Last weight: 57.2 kg (126 lb 1.7 oz) (07/28/26 0034)

I&Os: No intake or output data in the 24 hours ending 07/29/26 0738

Physical Exam
Gen: Sitting up in bed, NAD
Skin: Warm, dry, no rashes
CV: Extremities warm and well perfused
Pulm: Breathing comfortably on RA

IMAGING:*?*

I have reviewed the latest radiology results
XR T Spine 3 Vw
Result Date: 7/28/2026
On the standing AP, lateral, and swimmer's views, skin metallic markers are noted at apparent levels of pain centered at the T1/2 level and the upper T7 level. The multiple lytic lesions throughout the thoracic spine are better visualized on the prior day CT but grossly stable again consistent with bony metastases without definite evidence of gross pathologic fracture. Again there is essential anatomic alignment on the lateral and frontal views. There are mild degenerative disc changes in the mid and lower thoracic spine.

MRI C-T-L Spine w wo Contrast
Result Date: 7/28/2026
1. No cord compression. **Anterior epidural tumor extension at T5 and T8 levels. Diffuse osseous metastasis multiple cervical, thoracic and lumbar vertebral bodies.** Pathologic fractures involving T4, T5 and T8 vertebral bodies with mild height loss at T5 (40%).

CTA Head and Neck Angio
Result Date: 7/27/2026
1. Normal head CT. No acute infarct, hemorrhage or mass effect. 2. Normal CTA head. No high-grade stenosis or occlusion. 3. Normal CTA of the neck vessels. No stenosis, dissection or occlusion. Internal carotid artery origin stenosis by NASCET criteria: No significant stenosis by NASCET criteria.

CT Full Spine w Contrast
Result Date: 7/27/2026
Extensive lytic osseous metastases involving multilevel vertebral bodies and posterior elements. Redemonstrated age-indeterminant mild pathologic fractures (<25% height loss) in the C4, C6, T1, T4, T5, T8, and L5 levels. Findings are grossly similar to the prior PET/MR. * No definite new evidence of significant vertebral fracture or subluxation. * Of note, there are some extra-osseous extension involving left C4/5, left C6/7, and right T8/9 foraminal canals, and S1, S2/3 anterior epidural extension, resulting in spinal canal narrowing as described. Findings are similar to the 07/13/2026 abdominal CT.

PATHOLOGY:*?*
I have reviewed the latest pathology results

7/24/26:
A) Right iliac crest, biopsy:
- Metastatic carcinoma.

7/22/26:
A) Left breast, 1:00 7 cm FN, core biopsy:
- Invasive lobular carcinoma. See Synoptic Checklist.

B) Lymph node, right axilla, core biopsy:
- Metastatic carcinoma, See Comment.

COMMENT:
B) Neoplastic cells are morphologically similar to the findings in part A, compatible with metastasis from breast primary.

Biomarker reporting: ER positive, PR positive, HER2 negative. Negative E-cadherin supports lobular phenotype.

ASSESSMENT/PLAN?
47 year old female with newly diagnosed stage IV breast cancer not on any systemic therapy with metastatic disease to spine presenting with rapidly progressive neck/back pain, admitted for pain control and expedited XRT.

#Stage IV breast cancer, ER+/PR+/HER2-
 # Diffuse osseous metastases
Breast, lymph node, and iliac crest biopsies consistent with metastatic breast cancer, not on any systemic therapies. Admitted for pain control (iso intractable cancer-related neck/back pain with known osseous metastases) and possible expedited inpatient initiation of XRT. MRI 7/28 notable for diffuse metastatic lesions in cervical, thoracic, and lumbar spine as well as anterior epidural tumor extension at T5 and T8.
- Neurosurgery consulted in ED; no surgical intervention planned; spinal lesions not functionally unstable.
- Radiation oncology consulted 7/28. **Plan for single treatment/ 8 Gy x1. XRT scheduled today at 3:30 pm.**
- Hydroxyzine 10 mg x1 given for pre-procedure anxiety.
- Medical oncology consulted; anticipate outpatient initiation of hormone therapy (final recs pending).
- AM LFTs ordered
- Interventional radiology consulted 7/28. **Plan for vertebroplasty/kyphoplasty for stabilization in outpatient setting following radiation therapy.**
- Outpatient oncologist Dr. Eaton aware. Will need to schedule for outpatient follow-up with breast oncology prior to d/c (not currently following).

 # Neck and back pain, secondary to above
Pt continues to have uncontrolled neck/back pain despite initiation of MS Contin 30 mg BID yesterday 7/28 together with

oxycodone 10 mg q 4h prn and additional prn IV medications as below. She has been experiencing significant nausea 2/2 oxycodone use. Trial of 1x PO hydromorphone 4 mg was ineffective for pain control.
- Pain management:
- MS Contin 30 mg q12h SCH
- APAP 975mg q8H SCH
- **Increase oxycodone to 10-15 mg q 3h PRN**
- Methocarbamol 750mg q6h PRN
- Cont IV HM 0.5-1mg q4h PRN for now, though plan tooptimize PO pain management in anticipation of d/c
  - Bowel reg: daily Miralax/Senna
- C-spine soft collar for comfort

 # Nausea, 2/2 opioid use
- **Increase Zofran to 8 mg q 8h SCH; plan for scheduled antiemetics x 1 week following radiation therapy given increased pain control needs**
- Cont PO compazine 10 mg q6 hrs prn

#Migraines
#GAD
- Continue propranolol
- HOLD alprazolam, uses rarely outpatient

Inpatient Checklist:
Fluids/Electrolytes/Nutrition: Regular
Prophylaxis: lovenox
Lines/Drains/Airways: PIV
Disposition: Acute care. **Anticipate possible discharge Thursday 7/30 pending XRT and pain control needs.**

INTERVENTIONAL RADIOLOGY
CONSULT NOTE
REFERRING SERVICE: Medicine
CONSULT REASON: Vertebroplasty

PATIENT IDENTIFICATION / CHIEF COMPLAINT:
Yvonne K Franklin is a 47 year old female presenting with with newly diagnosed stage IV breast cancer not on any systemic therapy with metastatic disease to spine presenting with rapidly progressive neck/back pain.

HISTORY / INDICATION:
Pt admitted for pain control, MRI demonstrates extensive spinal metastases with several levels of compression fractures of varying acuity. No surgical intervention indicated per NSGY. Patients pain this morning is better controlled after titration of medication. She is scheduled for otpt radiotherapy currently later this week.

PHYSICAL EXAM:
Vitals (Most recent)

IMAGING:
[image][image]

ASSESSMENT AND PLAN
Yvonne K Franklin is a 47 year old female with a history of Metastatic breast cancer affecting multiple thoracic spinal levels. She is currently admitted for pain control as a result of this condition.

Given patients diffuse pain with some localized component to the affected levels as seen on imaging/spinal xray, it is possible patient would benefit from vertebroplasty. In particular, after discussion with our radiation and medical oncology colleagues, there is likely some benefit for vertebroplasty for stabilization of these levels during and following treatment. Given these benefits, will consider vertebroplasty for both structural and pain benefits, will need additional workup prior to procedure, which will follow radonc tx.

-Will plan for outpatient follow-up with Dr. Som for additional workup
-Will consider inpatient vertebroplasty in the inpatient setting if patient remains in house.
-Treatment per radiation oncology prior to vertebroplasty.

This consult was discussed with IR Attending, Dr. Som.

Thank you for the consult. Please contact Interventional Radiology (IR) via paging operator with questions at any time.

Physical Therapy Evaluation

Yvonne K Franklin
U4772842

7/28/2026
Duration of session: 15 Minutes

Subjective
Patient Report/Self-Assessment: Pt received reclined in bed, agreeable to PT. Pre-med for pain.

Home Living
Home Living Comments: Kirkland, WA
Type of Home: Multilevel home
Entry Stairs: 2-3 without railing
Indoor Stairs: 1 flight with 1 railing the entirety of spiral staircase, intermittently has 2 railings

Lives With: Family
Lives with Comments: Mark (husband), 2 young children
Assistance Available at Home : 24 hour assistance
Mobility Equipment Owned: None

Prior Level of Function : Indep with ADLs until a few weeks ago then pt has been requiring assist from spouse iso pain

Objective
RUE Assessment
RUE Assessment: Within Functional Limits
RUE Assessment Comments: MMT not formally assessed due to pain, functional upon assessment

LUE Assessment
LUE Assessment: Within Functional Limits
LUE Assessment Comments: MMT not formally assessed due to pain, functional upon assessment

RLE Assessment
RLE Assessment: Within Functional Limits
RLE Assessment Comments: MMT not formally assessed due to pain, functional upon assessment

LLE Assessment
LLE Assessment: Within Functional Limits
LLE Assessment Comments: MMT not formally assessed due to pain, functional upon assessment

Coordination
Movements are Fluid and Coordinated : Yes

Static Sitting Balance
Static Sitting Balance Level of Assistance: Independent
Dynamic Sitting Balance
Dynamic Sitting Balance Level of Assistance: Independent
Static Standing Balance
Static Standing Balance Level of Assistance: Independent
Dynamic Standing Balance
Dynamic Standing Balance Level of Assistance: Independent
Activity Tolerance
Endurance: Tolerates less than 10 min of activity, no significant change in vital signs
Endurance Comments: Limited by pain

Functional Level:
Bed Mobility
Supine to Sit: Independent;Head of Bed Elevated;Railings used
Sit to Supine: Independent;Head of Bed Elevated;Railings used
Transfers
Sit<>Stand: Independent
Ambulation
Distance: 180ft
Assistance Needs: Supervision / Stand by assistance
Assistive Device Used: None
Gait quality/descriptors: Narrow BOS;Decreased pace;Decreased step length
Stairs
Comments: Deferred this date due to pain

Interventions:
Theract:
- Pt, caregiver edu: PT POC, PT frequency, benefit of upright mobility and small bouts of activity for pain and fatigue management, fall risk safety, role of DME
- Indep bed mobility with HOB elevated and light use of railing, demos half log roll/half "crunch" with polite refusal of log roll trial iso pain and pt report she has found the least painful way to demo bed mobility
- Indep transfers without overt LOB, no AD, cueing for pacing for pain management
- Gait as above without overt LOB, pt denies inc in pain with amb, denies lightheadedness/dizziness, pt endorses feeling unsteady due to pain meds, FWW provided for hallway ambulation if continues to feel loopy during future walks
- Stairs deferred due to pain

ASSESSMENT/PLAN
Yvonne presents to PT evaluation with impaired mobility and activity tolerance iso pain and decreased stability. She demos bed mobility, transfers, and in room mobility independently without overt loss of balance. She ambulates 2 laps around unit with supervision assist and no AD, demo'ing no overt loss of balance although pt reports unsteadiness due to pain meds. FWW

provided for pt to use in hallway. Anticipate no mobility barriers for home d/c. She benefits 1-2 further inpatient PT sessions to progress mobility, trial stairs, and order DME prn.

Recommend a **personal ride** for transportation as the patient is able to demonstrate a transfer as needed to access their vehicle, as well as positioning tolerance to manage the ride time/distance at discharge.

Barriers to Discharge: 1 flight of stairs to access living environment, anticipate no mobility barriers

Discharge Equipment: TBD, likely FWW

Goals:
Goal: Bed mobility, Independent (Flat mattress, no railing)
Estimated Completion Date: 08/15/26
Goal: Amb with AD, Independent
Estimated Completion Date: 08/15/26
Goal: Stairs, Supervision / Stand by assistance (x1 flight)
Estimated Completion Date: 08/15/26

Acute Care PT Plan of Care:
Treatment/Interventions: Therapeutic exercise, Therapeutic functional activities, Neuromuscular re-education, Gait/Stairs training, Wheelchair management training, Patient/family training
PT Plan: Skilled PT
PT Dosage: 1-2x/week
Plan for Next Session: Pre-med for pain, stairs, order AD prn, flat bed mobility, introduce f/u PT options including FHCC OP PT

Other Recommendations:
Recommendation for PT After Hospital Discharge: Comments (OP FHCC PT?)
PT Daily Recommendations: Walking in hallway 2-3x daily

Occupational Therapy Evaluation

Patient Name: Yvonne K Franklin
MRN: U4772842
Total Treatment time: 20 Minutes

Home Living:	Type of Home: Multilevel home Entry Stairs: 2-3 without railing Indoor Stairs: 1 flight with 1 railing the entirety of spiral staircase, intermittently has 2 railings Lives With: Family Lives with Comments: Mark (husband), 2 young children Assistance Available at Home : 24 hour assistance Bathroom Toilet: Standard Mobility Equipment Owned: None Home Living Comments: Kirkland, WA
Prior Level of Function:	BADLs: Independent IADLs: Requires assist Functional Mobility: Independent Details of previous level of function: Yvonne hasn't been able to perform IADLs including cooking, housework. Spouse Mark has taken over those.

Upper Extremities:

--- ---

Lower Extremities:	
Hand Function:	
Coordination:	
Sensation:	
Proprioception:	
Vision:	
Perception:	
Cognition:	Overall Cognitive Status: Within Functional Limits

Subjective: "It seems silly but I can't even lift a plate. I feel it all the way up my neck."

Current Level of Function

Toileting:	Independent
Toilet/Commode Transfer:	Independent

Therapeutic Interventions

Functional Transfers	
Sit>Stand:	Independent

Functional Mobility: within the room independently and ambulates with spouse Mark with arms linked together

ADL/IADL Comments: Yvonne's primary trigger for pain from a functional standpoint is getting in and out of bed, as in her head descent to gravity. She is also unable to tolerate laying flat. OT provided education in options including use of bed wedge(s) vs 1st floor hospital bed. Also demonstrated how spouse Mark can provided physical assist at her head/ neck while she transitions from sitting > supine. Yvonne describes log rolling to manage pain and OT built upon that strategy to include no bending/lifting/twisting in her day. Ordered 3 different cervical collars for patient to try and explained the mechanism of soft support.

Assessment

Assessment: Upon interview, Yvonne is and has been able to complete bathing, toielting, dressing and self care on her own but struggles with IADLs that include any lifting or bending. OT provided education in maintaining a neutral spine and gave ideas for strategies and supplies to support her painful neck area during bed mobility. Will follow up as needed for usefulness of cervical collars and justify a hospital bed as needed.

Session Tolerance: Patient limited by pain, Patient tolerated treatment well

In House OT Plan

Plan:	Skilled OT
Treatment Interventions:	Self-care/Home management, Caregiver education/training
Frequency:	1-2 more sessions
Coverage for Next Shift:	f/u on neck collar and rule out need for rental hospital bed

Discharge Recommendations

Recommendations:	No further OT needed
Barriers to Discharge:	none anticipated
Assistance with:	IADLs
Supervision with:	
Equipment Recommended:	Hospital bed vs bed wedge

Goals

1. Goal: Bed mobility, Tolerate orthosis without complications, Minimum Assist (less than 25% help needed), Adaptive equipment
   Estimated Completion Date: 07/31/26
2. Goal: Toileting, Toilet transfer, Independent
   Estimated Completion Date: 08/01/26

Progress Note

Yvonne K Franklin ("Yvonne") - DOB: 6/17/1979 (47 year old female)
Gender Identity: Female Pronouns: she/her/hers
Admit Date: 7/27/2026
Code Status: Full Code

CHIEF CONCERN / IDENTIFICATION:
Yvonne K Franklin is a 47 year old female with newly diagnosed stage IV breast cancer not on any systemic therapy with metastatic disease to spine presenting with rapidly progressive neck/back pain.

SUBJECTIVEINTERVAL HISTORY:
Pt endorses neck and back pain ongoing since February and acutely worsening over the weekend, which prompted her admission overnight. She has had stiffness in neck, upper extremities, and back that makes certain movements difficult, including bending forward at the waist and lying flat. She also notes pain with arm movements. Her pain is significantly improved on current multimodal regimen.

Pt and her husband (present at bedside) are understandably distraught regarding her recent metastatic cancer diagnosis. They would like to know more about the plan for treatment, including radiation and long term therapeutic options. Explained ongoing discussion with IR/rad onc/med onc which will inform a treatment plan in the coming days.

SCHEDULED MEDICATIONS:
• acetaminophen, 975 mg, q8h SCH
• cholecalciferol, 4,000 units, Daily
• enoxaparin, 40 mg, q HS

History and Physical

Yvonne K Franklin ("Yvonne") - DOB: 6/17/1979 (47 year old female)
Gender Identity: Female Pronouns: she/her/hers
PCP: Paras, Leilani D, MD
Code Status: Full Code

CHIEF CONCERN / IDENTIFICATION:
Yvonne K Franklin is a 47 year old female with newly diagnosed stage IV breast cancer not on any systemic therapy with metastatic disease to spine presenting with rapidly progressive neck/back pain.

SUBJECTIVEHISTORY OF PRESENT ILLNESS:
Undergoing outpatient workup for presumed metastatic breast cancer (breast/LN biopsy results 7/27 confirm breast cancer, pending bone biopsy results). The night preceding admission developed acute worsening of neck and back pain to the point of being awoken from sleep and unable to bend or perform standard ADLs 2/2 severe, 10/10 pain unresponsive to home oxycodone 5-10mg. Pain is in the R neck and bilateral paraspinal regions, primarily in the upper/thoracic spine, worse with movement and associated with a feeling of "heaviness" in her head as if she cannot hold her head up due to pain/weakness in her neck.
She was seen in Radiation Oncology on 7/27 for CT sim for XRT planning and then presented to ACE clinic for severe pain and was recommended to proceed to the ED for neurosurgical evaluation given severity of neck pain and known C spine metastases.
No fevers, chills, new neurologic symptoms of focal weakness, numbness, tingling, loss of bowel/bladder control.
ED course:
Afebrile, VS notable for tachycardia and transient hypertension. Labs with mild hypokalemia and leukocytosis, otherwise unremarkable. CT spine demonstrated multiple osseous metastases with multiple associated pathologic fractures in the cervical and thoracic spine and extra-osseous extension of lesions in the C-spine (e.g. C4, C6) with associated foraminal narrowing. CTA head and neck without e/o arterial dissection or occlusion.

Admitted to medicine for pain control and possible expedited XRT.

OUTPATIENT MEDICATIONS:

Current Outpatient Medications

Medication	Instructions	
•	albuterol HFA 108 (90 Base) MCG/ACT inhaler	2 puffs, Every 4 hours PRN
•	ALPRAZolam (XANAX)	0.25 mg, Nightly PRN
•	cholecalciferol (VITAMIN D-3)	4,000 units, Daily
•	naloxone 4 MG/0.1ML nasal spray	Use 1 spray in one nostril for suspected opioid overdose. Call 911. If unresponsive in 2 to 3 minutes, repeat with new naloxone nasal spray in opposite nostril.
•	oxyCODONE	5-10 mg, Oral, Every 4 hours PRN
•	polyethylene glycol 3350 (MIRALAX)	17 g, Daily
•	prochlorperazine (COMPAZINE)	10 mg, Oral, Every 6 hours PRN
•	propranolol (INDERAL)	10 mg, Daily
•	tretinoin 0.025 % cream	1 application, 3 times weekly

ALLERGIES:
Propofol and Fentanyl

OBJECTIVE
T: 37.5 °C (07/27/26 1658) **BP:(!) 150/92** (07/27/26 1658) **HR:(!) 112** (07/27/26 1658)

IMAGING:
I have reviewed the latest radiology results
MRI C-T-L Spine w wo Contrast

Final Result by Blackmore, Christopher Craig, MD (07/28 0142)

1. No cord compression. Anterior epidural tumor extension at T5 and T8 levels

Diffuse osseous metastasis multiple cervical, thoracic and lumbar vertebral bodies. Pathologic fractures involving T4, T5 and T8 vertebral bodies with mild height loss at T5 (40%).

This is a preliminary report dictated by Abraham Mengstu M.D., neuroradiology fellow (PGY-6).

Unless an Attending Final Impression appears below, the report has not yet been finalized and an attending radiologist has not reviewed these images.

ATTENDING FINAL REVIEW:

I have personally reviewed the images & agree with the report (or as edited). Bilski grade at T8 is 1C.

I have personally reviewed the images and agree with the report (or as edited).

CTA Head and Neck Angio

Final Result by Johnson, Chenara, MD (07/27 2148)

1. Normal head CT. No acute infarct, hemorrhage or mass effect.

2. Normal CTA head. No high-grade stenosis or occlusion.

3. Normal CTA of the neck vessels. No stenosis, dissection or occlusion.

Internal carotid artery origin stenosis by NASCET criteria: No significant stenosis by NASCET criteria.

ATTENDING COMMENT:

I agree with the preliminary report with the following comments:

Mucous retention cysts in the bilateral maxillary sinuses.

Fetal origin of the left PCA.

Common origin of the left common carotid and right brachiocephalic arteries from the aortic arch.

I have personally reviewed the images and agree with the report (or as edited).

IP Consult to Interventional Radiology (Results Pending)

PATHOLOGY:
I have reviewed the latest pathology results
7/22 Lymph node Right and Breast Left:

Final Diagnosis

A) Left breast, 1:00 7 cm FN, core biopsy:
- Invasive lobular carcinoma. See Synoptic Checklist.

B) Lymph node, right axilla, core biopsy:
- Metastatic carcinoma, See Comment.

COMMENT:
B) Neoplastic cells are morphologically similar to the findings in part A, compatible with metastasis from breast primary.

ASSESSMENT/PLAN
47 year old female with newly diagnosed stage IV breast cancer not on any systemic therapy with metastatic disease to spine presenting with rapidly progressive neck/back pain.

#Stage IV breast cancer
#diffuse osseous metastases
Breast/lymph node biopsy 7/22 c/w metastatic breast cancer, not yet on any systemic therapies. Undergoing outpatient planning for XRT and recently completed CT sim on 7/27 but admitted from ACE clinic with intractable pain affecting ability to ambulate and perform ADLs outpatient. NSGY consulted in the ED, no surgical intervention planned, spine lesions not functionally unstable. Admitted for pain control and expedited inpatient initiation of palliative XRT for pain control, additionally will consult IR for consideration of vertebroplasty/kyphoplasty for structural support per outpatient NSGY note for high risk vertebral level involvement.
Consults:
- NSGY
- Radiation Oncology - order placed AM consult
- IR for vertebroplasty/kyphoplasty - order placed, AM consult

Formatting of this note might be different from the original.

Consult Note

Yvonne K Franklin ("Yvonne") - DOB: 6/17/1979 (47 year old female)
Gender Identity: Female Pronouns: she/her/hers
Admit Date: 7/27/2026
Code Status: Full Code

Inpatient Consult to Oncology
Consult performed by: Zhang, Michelle Yu, MD
Consult ordered by: Lenaeus, Michael Jeffrey, MD

?**CHIEF CONCERN / IDENTIFICATION**:
Yvonne K Franklin is a 47 year old pre-menopausal female with new dx of metastatic breast cancer (ER 3+/ PR 3+, HER2-) w/ multifocal lytic osseous lesions (biopsy confirmed breast cx) and pathologic thoracic compression.

SUBJECTIVEHISTORY OF PRESENT ILLNESS:
She had mammogram 4/2025 that was benign. She was then in her overall state of health when she had onset of backpain 2/2026. The pain progressively got worse - she did not notice functional limitations until ~ 3 weeks ago when she had more pain with carrying plates/ things around the house.

She presented for care and subsequently had MRI spine 7/1/2026 with expansile lesions in T1, T5, T8-T10 with expansile element in T10. CT chest/abdomen/pelvis on 7/13/26 showed diffuse bony lesions throughout spine and pelvis, left 11th rib fracture. Few scattered lung nodules.

She was seen in clinic 7/15 with undiagnosed mass clinic. She had a PET-CT 7/21 with FDG avid lesion in L breast c/f breast neoplasm, R LAD, innumerable FDG avid lesions associated with compression fractures involving several vertebral bodies.

Her last period was ended ~ 2 weeks ago. It was much longer than typical e.g. 3 weeks- she just had IUD removed. On ROS denies dental issues or other chronic health conditions.

Estrogen exposure: she was on birth control pills from 18-33 then switched to Mirena IUD. This is her second IUD.
ECOG: 1 pain limiting function but remained active. She was walking 30 minutes but more slowly due to pain.
SH: works in office. She has two kids 9& 11 yo. She drinks 1-2 drinks alcohol on a few to most nights of the week. Denies history of smoking.
FH: grandmother had colon cancer at in 60s
ONCOLOGY HISTORY:
7/13/2026: CT CAP lytic lesions, L 11 rib fracture a few lung nodules.
7/21/2026: PET-CT w FDG lesions in L breast, R axilla, FDG avid osseous lesions, compression fracture.
7/22/2026: R axilla LN biopsy- metastatic carcinoma, L breast core biopsy - IDC. Biopmarker of L breast shows ER+ (3+) PR (3+) HER2 negative. Ki-67 21-30%

MEDICATIONS:
SCHEDULED MEDICATIONS:
• acetaminophen, 975 mg, q8h SCH
• [START ON 7/30/2026] anastrozole, 1 mg, Daily
• cholecalciferol, 4,000 units, Daily
• enoxaparin, 40 mg, q HS
• leuprolide acetate, 7.5 mg, Once
• morphine ER, 30 mg, q12h SCH
• ondansetron, 8 mg, q8h SCH
• polyethylene glycol 3350, 17 g, Daily
• propranolol, 10 mg, Daily
• senna, 17.2 mg, BID
• [START ON 7/30/2026] zoledronic acid, 4 mg, Once

INFUSED MEDICATIONS:
?

PRN MEDICATIONS:
• albuterol HFA, 2 puff, q4h PRN
• HYDROmorphone, 0.5-1 mg, q4h PRN
• melatonin, 3 mg, q HS PRN
• methocarbamol, 750 mg, q6h PRN
• oxyCODONE, 10-15 mg, q3h PRN
• prochlorperazine, 10 mg, q6h PRN

ALLERGIES:
Propofol and Fentanyl

ASSESSMENT/PLAN
Yvonne K Franklin is a 47 year old pre-menopausal female with new dx of metastatic breast cancer (ER 3+/ PR 3+, HER2-) w/ multifocal lytic osseous lesions (biopsy confirmed breast cx) and pathologic thoracic compression.

#lytic lesions
T4,T5, T8, sternum, ribs
L 9th rib expansile lesion w/ soft tissue component
#11th rib fracture
#Lytic lesions in throracolumbar spine/ sacrum as well as bilateral iliac bones
#few lung nodules - indeterminate

Today we reviewed she has metastatic (stage IV) breast cancer, meaning it is incurable. However there are many lines of effective treatment in metastatic breast cancer / survival is generally measured on the timeline of years. Given her ER+/PR+ status, she is a candidate to start inpatient hormone therapy. We would recommend she speak further without patient oncologist regarding long term treatment planning - standard first line therapy would include additional CDK4/6 inhibitor.

For her symptoms we would recommend adding zometa for bony pain and will also help with bone density. Can also consider adding NSAID for multimodal control of bony pain as well.

- add on ca 15-3
- lupron 7.5mg (1 mo dose)
- anastrazole 1mg daily
- zometa 4mg
- consider NSAID for additional adjunctive pain control

- outpatient oncology fu
  - consider child life referral

Please reach out if you have any questions or concerns. Patient was staffed with Dr. Coveler, attending physician.

Formatting of this note might be different from the original.

Consult Note

Yvonne K Franklin ("Yvonne") - DOB: 6/17/1979 (47 year old female)
Gender Identity: Female Pronouns: she/her/hers
Admit Date: 7/27/2026
Code Status: Full Code

Inpatient Consult to Radiation Oncology
Consult performed by: Anderson, Eden, MD
Consult ordered by: Lazarevic-Fogelquist, Adrian, MD

?

CHIEF CONCERN / IDENTIFICATION:
Yvonne K Franklin is a 47 year old female with cancer of unknown primary, possibly breast s/p breast biopsy 7/22/26, s/p bone biopsy 7/24/26 (result pending). She presented with worsening pain from osseous mets in the spine.

Radiation oncology consulted for consideration of extensive expedited inpatient radiation therapy

SUBJECTIVEHISTORY OF PRESENT ILLNESS:
Patient is known to our outpatient radiation oncology team, she is followed by Dr. Kang as an outpatient. They were planning for radiation therapy from approximately C3-T11, unfortunately patient's back pain worsened since the time of her simulation and she was admitted to UWMC.

Neurosurgery is not offering operative intervention, however interventional radiology considering kyphoplasty. In my discussion with her today she endorses pain largely originating from the neck and upper back. Denies weakness/numbness, or paresthesias.

She expresses a desire to initiate radiation therapy soon as possible. Radiation plan is nearly complete, planned outpatient start date was 7/30.

IMAGING:
I have reviewed the latest radiology results

XR T Spine 3 Vw

Final Result by Shibata, Dean Kazuo, MD (07/28 1614)

On the standing AP, lateral, and swimmer's views, skin metallic markers are noted at apparent levels of pain centered at the T1/2 level and the upper T7 level. The multiple lytic lesions throughout the thoracic spine are better visualized on the prior day CT but grossly stable again consistent with bony metastases without definite evidence of gross pathologic fracture. Again there is essential anatomic alignment on the lateral and frontal views. There are mild degenerative disc changes in the mid and lower thoracic spine.

MRI C-T-L Spine w wo Contrast

Final Result by Blackmore, Christopher Craig, MD (07/28 0142)

1. No cord compression. Anterior epidural tumor extension at T5 and T8 levels

Diffuse osseous metastasis multiple cervical, thoracic and lumbar vertebral bodies. Pathologic fractures involving T4, T5 and T8 vertebral bodies with mild height loss at T5 (40%).

This is a preliminary report dictated by Abraham Mengstu M.D., neuroradiology fellow (PGY-6).

Unless an Attending Final Impression appears below, the report has not yet been finalized and an attending radiologist has not reviewed these images.

ATTENDING FINAL REVIEW:

I have personally reviewed the images & agree with the report (or as edited). Bilski grade at T8 is 1C.

I have personally reviewed the images and agree with the report (or as edited).

CTA Head and Neck Angio

Final Result by Johnson, Chenara, MD (07/27 2148)

1. Normal head CT. No acute infarct, hemorrhage or mass effect.

2. Normal CTA head. No high-grade stenosis or occlusion.

3. Normal CTA of the neck vessels. No stenosis, dissection or occlusion.

Internal carotid artery origin stenosis by NASCET criteria: No significant stenosis by NASCET criteria.

ATTENDING COMMENT:

I agree with the preliminary report with the following comments:

Mucous retention cysts in the bilateral maxillary sinuses.

Fetal origin of the left PCA.

Common origin of the left common carotid and right brachiocephalic arteries from the aortic arch.

I have personally reviewed the images and agree with the report (or as edited).

IP Consult to Interventional Radiology (Results Pending)

ASSESSMENT/PLAN
Yvonne K Franklin is a 47 year old female with cancer of unknown primary, possibly breast s/p breast biopsy 7/22/26, s/p bone biopsy 7/24/26 (result pending). She presented with worsening pain from osseous mets in the spine.

Radiation oncology consulted for consideration of extensive expedited inpatient radiation therapy

Overall her presentation is consistent with pain crisis secondary to osseous metastatic lesions. We wish to make every effort to avoid a prolonged hospitalization given the need for her to establish outpatient with FHCC medical oncology for systemic therapies.

She is already planned for radiation therapy to the painful osseous lesions, however we will work to expedite her radiation start date. Anticipate radiation therapy start tomorrow 7/29. This will likely be followed by kyphoplasty as an outpatient.

Summary of Recommendations:
- Anticipate radiation therapy start 7/29/2026, 3:30 PM

This case was discussed with attending physician, Dr. Kang.

If further questions arise during this admission, I can be contacted via Epic Secure Chat for non-urgent issues, or by paging the on-call radiation oncology resident for urgent matters. The radiation oncology inpatient resident consult service will continue to follow.

Eden Anderson, MD

Associated Order(s): IP CONSULT TO NUTRITION SERVICES

Formatting of this note might be different from the original.

Nutrition Screen:
Patient presenting d/t acute severe neck and back pain with muscle spasms iso known diffuse lytic lesions is admitted for further management.
Is s/p CT simulation for XRT on 7/27/26

PMH significant for new stage IV breast cancer with diffuse osseous mets to multiple cervical, thoracic, and lumbar vertebral bodies with T4, T5, and T8 vertebral body pathologic fractures, iliac crest mets, s/p L breast biopsy 7/22/26, migraines, GAD

Subjective:
Roused from napping, food at bedside (bananas, yogurt, fruit, drinks) states she already had some food to eat but with poor appetite, noted emesis bag nearby, pt endorses some nausea.

Nutrition interventions:
Received consult d/t weight loss on screening.
Reviewed chart, discussed current intakes, POC.
Encouraged good po intake as tolerated, ok for small bland choices at this time.
Encouraged good po intake with adequate calories and protein to meet nutritional needs, for best outcomes during tx.

Plan:
Will continue to monitor status and POC (XRT? Chemo?)
Will monitor for adequacy of po intake
Will re-screen weekly if LOS extended

Nutrition History PTA:
Patient sleepy, keeping eyes closed, minimally engaged at this time, did not address at this time.

Po Intake:
No data found. Patient reports eating some bfast

GI: nausea (Last BM: 7/26/26)

Wounds:
R anterior hip biopsy site

Food Allergies: No food allergies

Active Diet Orders

Diet	
	Adult Diet Regular

UBW: 130 lb the last 6 months

Height/Weight Data:
Height: 165.1 cm (5' 5")
Admit Weight: 57.2 kg (126 lb 1.7 oz)
Most Recent: Body mass index is 20.98 kg/m².

Wt Readings from Last 10 Encounters:

07/28/26	57.2 kg (126 lb 1.7 oz)
07/27/26	57.1 kg (125 lb 12.8 oz)
07/21/26	55.7 kg (122 lb 12.7 oz)
07/15/26	56.7 kg (125 lb)

Weight Loss: Yes
3% weight loss the last month

Nutritional Risk Factors
New stage IV breast cancer with diffuse osseous mets
Weight loss
Intractable cancer pain
Poor appetite, nausea

Desirae B - 07/30/2026 4:38 PM PDT

Formatting of this note might be different from the original.

Patient Summary

47 year old female with newly diagnosed stage IV breast cancer not on any systemic therapy with metastatic disease to spine presenting with rapidly progressive pain and inability to perform ADLs. Admitted for pain control and expedited inpatient initiation of palliative XRT for pain control.

Pt A&O x4. Ongoing moderate to severe back pain and muscle spasms. PRN Robaxin, Dilaudid, and Oxycodone administered with mild-moderate effect. XRT today 7/29 at 1530. Med onc consulting. Ambulates with SBA.Patient pain regiment changed. Increased oxycodone 10-15 mg and oral zofran scheduled for nausea related to oxycodone. PRN Dilaudid given before XRT. Oxycodone, milk of mag, Robaxin given after XRT. Ne LupronDepot initiated.

VSS, pain manageable. Pt feels comfortable going home today w/ husband. We went over discharge medications and patient has no concerns. Discharge medications sent over to preferred pharmacy and hard script is with patient.

Illness Severity

Stable

CHIEF COMPLAINT

Chief Complaint	
Patient presents with	
•	Neck Pain

Date of Service: 7/27/2026 4:58 PM

[image]
Pt told to came down form ACE clinic to ED for pain management. Hx of breast cancer with mets to bone. Pt endorsing 4/10 neck pain. Stiffness, and muscle spasms. Pt is tearful in triage, is A&Ox4 and in a wheelchair. Pt was told that she is losing bone density in her neck. Denies any new dizziness, vision changes, or numbness/tingling in body.

-

HISTORY OF PRESENT ILLNESS AND REVIEW OF SYSTEMS

Yvonne K Franklin is a 47 year old female patient with history of progressive neck and thoracic pain since February recently found to be secondary to metastatic brain cancer with diffuse lytic bone lesions who presents with severe neck pain.

Patient developed acute severe neck and back pain with muscle spasms that began around last night. She has been using oxycodone to help with her pain, takes 10 mg every 4 hours though this is not adequate to control her pain now. She presented to the oncology clinic earlier today for evaluation. Had a radiation oncology appointment today for CT simulation for planned palliative radiation therapy. I**n oncology clinic, she underwent a CT full spine which demonstrated worsening osteolytic lesions with pathologic fractures and spinal stenosis.** She was sent to the ED for admission. Endorses severe neck and back pain at this time. Denies paresthesias or paralysis, bladder or bowel issues
Has not noticed any difficulty moving her limbs or numbness and tingling anywhere in her body. She does note that is very difficult to walk because of her pain and that when she raises her arms up it also exacerbates her pain.
D
Denies any shortness of breath, chest pain, nausea or vomiting, changes in urinary or bowel habits.

Review of systems as noted above in HPI otherwise other systems reviewed and found to be negative or noncontributory.

External records of patient were reviewed: Oncology note from today.
Interpreter was not used
An independent historian was not used to corroborate patient's presentation and history.

MEDICATIONS AND ALLERGIES

OUTPATIENT MEDICATIONS:

Current Outpatient Medications		
Medication	Instructions	
•	naloxone 4 MG/0.1ML nasal spray	Use 1 spray in one nostril for suspected opioid overdose. Call 911. If unresponsive in 2 to 3 minutes, repeat with new naloxone nasal spray in opposite nostril.
•	oxyCODONE	5-10 mg, Oral, Every 4 hours PRN
•	prochlorperazine (COMPAZINE)	10 mg, Oral, Every 6 hours PRN
•	propranolol (INDERAL)	10 mg, Daily

ALLERGIES:
Review of patient's allergies indicates:

Allergies		
Allergen	Reactions	
•	Propofol	Palpitations and Other

		PVC's *Palpitation*
•	Fentanyl	Other
		Isolated PVCs

Vital signs and nursing notes reviewed

Physical Exam
GEN: tearful-appearing patient on ED stretcher, moderate distress
EYES: EOMI, no discharge or bleeding
NOSE: no rhinorrhea
MOUTH: no visible lesions on oral mucosa
CARDIAC: RRR, no rubs/murmurs, strong radial pulse, no pedal edema
CHEST: symmetric chest rise and fall, no accessory muscle use, CTAB - no wheezing/rhonchi/rales
ABDOMEN: non-distended, soft, non-tender, no masses palpable
MSK: Significant midline tenderness of the C-spine on palpation, limited range of motion of the neck due to significant pain
SKIN: no erythema, rashes, abrasions, lacerations, edema on visible skin
NEURO: patient is alert and oriented, able to answer questions appropriately and follow commands
CN: pupils are 3 mm, equal, round, reactive to light bilaterally, EOMI, sensation intact to all facial dermatomes, facial muscles symmetric at rest and on activation, hearing grossly intact, palatal rise symmetric on phonation, tongue protrusion midline, SCM strength intact
MOTOR: moving all extremities spontaneously, limited flexion of BUE d/t pain, symmetric grip strength, finger extension intact bilaterally, no pronator drift bilaterally, no drift of BLE, dorsiflexion against resistance intact bilaterally
SENSORY: sensation to crude touch intact to upper and lower extremities bilaterally

LABORATORY:

Labs Reviewed

CBC (HEMOGRAM) - Abnormal

Result	Value	
	WBC	8.36
	RBC	3.35 (*)
	Hemoglobin	10.3 (*)
	Hematocrit	31 (*)
	MCV	93
	MCH	30.7
	MCHC	33.2
	Platelet Count	226
	RDW-CV	12.1

LAB ADD ON ORDER

	eGFR by CKD-EPI 2021	>60
BASIC METABOLIC PANEL		
CBC (HEMOGRAM)		

IMAGING:

ED Wet Read:

XR T Spine 3 Vw
Final Result
On the standing AP, lateral, and swimmer's views, skin metallic markers are noted at apparent levels of pain centered at the T1/2 level and the upper T7 level. The multiple lytic lesions throughout the thoracic spine are better visualized on the prior day CT but grossly stable again consistent with bony metastases without definite evidence of gross pathologic fracture. Again there is essential anatomic alignment on the lateral and frontal views. There are mild degenerative disc changes in the mid and lower thoracic spine.
MRI C-T-L Spine w wo Contrast
Final Result
1. No cord compression. Anterior epidural tumor extension at T5 and T8 levels
Diffuse osseous metastasis multiple cervical, thoracic and lumbar vertebral bodies. Pathologic fractures involving T4, T5 and T8 vertebral bodies with mild height loss at T5 (40%).
This is a preliminary report dictated by Abraham Mengstu M.D., neuroradiology fellow (PGY-6).
Unless an Attending Final Impression appears below, the report has not yet been finalized and an attending radiologist has not reviewed these images.
ATTENDING FINAL REVIEW:
I have personally reviewed the images & agree with the report (or as edited). Bilski grade at T8 is 1C.
I have personally reviewed the images and agree with the report (or as edited).
CTA Head and Neck Angio
Final Result
1. Normal head CT. No acute infarct, hemorrhage or mass effect.
2. Normal CTA head. No high-grade stenosis or occlusion.
3. Normal CTA of the neck vessels. No stenosis, dissection or occlusion.
Internal carotid artery origin stenosis by NASCET criteria: No significant stenosis by NASCET criteria.
ATTENDING COMMENT:
I agree with the preliminary report with the following comments:
Mucous retention cysts in the bilateral maxillary sinuses.
Fetal origin of the left PCA.
Common origin of the left common carotid and right brachiocephalic arteries from the aortic arch.
I have personally reviewed the images and agree with the report (or as edited).
IP Consult to Interventional Radiology (Results Pending)

Radiology Final Result:
No image results found.

ED COURSE/MEDICAL DECISION MAKING

Nontoxic but anxious appearing 47-year-old female with a history of metastatic breast cancer with diffuse lytic bone lesions and possible trickle vertebral fractures presenting from oncology clinic where she presented with worsening neck and back pain. CT full spine demonstrated lytic osseous metastases involving multilevel vertebra with pathologic fractures, some extraosseous extension of the spine with spinal canal narrowing. She was sent to the ED for admission and further workup of her pain. I discussed this patient with oncology and neurosurgery and they have requested further imaging studies. Plan for symptomatic control and admission for further workup and management.

Please see ED course below for updates on patient's workup and management.

ED course:

ED Course as of 07/28/26 1934	
Mon Jul 27, 2026	
1935	Discussed patient's case with oncology. Oncology stated that preliminary plan was to have IR consult and possible radiation oncology. However with spinal findings, neurosurgery was involved and had requested MRI full spine and CTA head and neck pending neurosurgery recommendations, patient will be admitted to med service [TL]
1935	I discussed patient's case with medicine triage. They asked that we wait for neurosurgery recommendations prior to admission. Paged neurosurgery. [TL]
2000	I discussed patient's case with neurosurgery. No plans for operative management, neurosurgery will not admit to their service. Plan for admission to medicine of service. I informed oncology and medicine team [TL]
ED Course User Index [TL] Le, Tudi, MD	

I discussed patient's presentation and/or management with: oncology, NSGY, medicine.
Social determinants of health that affect patient's care today include: NA

Based on patient's HPI, examination, and today's work-up, it is my clinical judgement patient's presentation is most consistent with metastatic breast cancer, pathologic spinal fractures, lytic spinal lesions. Labs and/or imaging were independently interpreted by me. On reassessment, patient's vitals were stable and their exam remained unchanged.

Ultimately, patient was admitted to medicine O service. Sign out to admitting provider is complete

Medications given in the ED:

Medications
albuterol HFA (Proventil HFA; Ventolin HFA) 108 (90 Base) MCG/ACT inhaler 2 puff (has no administration in time range)
cholecalciferol (Vitamin D-3) tablet 4,000 units (4,000 units Oral Given 7/28/26 0819)
oxyCODONE tablet 5-10 mg (10 mg Oral Given 7/28/26 1536)
propranolol (Inderal) tablet 10 mg (10 mg Oral Given 7/28/26 0820)
enoxaparin (Lovenox) injection 40 mg (40 mg Subcutaneous Given 7/27/26 2219)
acetaminophen (Tylenol) tablet 975 mg (975 mg Oral Given 7/28/26 1348)
melatonin tablet 3 mg (has no administration in time range)
polyethylene glycol 3350 (Miralax) packet 17 g (17 g Oral Given 7/28/26 0819)
senna (Senokot) tablet 17.2 mg (17.2 mg Oral Given 7/28/26 0819)
ondansetron (Zofran) tablet 4 mg (has no administration in time range)
ondansetron (Zofran) injection 4 mg (4 mg Intravenous Given 7/28/26 0819)
prochlorperazine (Compazine) injection 10 mg (10 mg Intravenous Given 7/28/26 1019)
prochlorperazine (Compazine) tablet 10 mg (has no administration in time range)
HYDROmorphone (Dilaudid) injection 0.5-1 mg (0.5 mg Intravenous Given 7/28/26 0819)
methocarbamol (Robaxin) tablet 750 mg (750 mg Oral Given 7/28/26 1024)
morphine ER (MS Contin) ER tablet 30 mg (has no administration in time range)
ondansetron (Zofran) injection 8 mg (8 mg Intravenous Given 7/27/26 1943)
lactated ringers IV Bolus 1,000 mL (1,000 mL Intravenous New Bag/Syringe 7/27/26 1951)
iohexol (Omnipaque) 350 MG/ML contrast 100 mL (100 mL Intravenous Contrast Given 7/27/26 2018)
LORazepam injection 1 mg (1 mg Intravenous Given 7/27/26 2213)
gadoteridol (Prohance) 279.3 MG/ML contrast injection 6 mmol (6 mmol Intravenous Contrast Given 7/27/26 2335)
potassium chloride ER tablet 40 mEq (40 mEq Oral Given 7/28/26 0617)

CLINICAL IMPRESSION/DISPOSITION

Clinical Impression:

Clinical Impressions:
[M54.2] Neck pain
[C79.9] Metastatic breast cancer to bone diffusely
[M54.6] Acute bilateral thoracic back pain
[M48.50XA] Pathological compression fracture of vertebra, initial encounter (HCC)

Follow Up:
No follow-up provider specified.

XR T SPINE 3 VW - Final result (07/28/2026 2:27 PM PDT)

Anatomical Region	Laterality	Modality
T-spine	N/A	Digital Radiography

Specimen (Source)	Anatomical Location / Laterality	Collection Method / Volume	Collection Time	Received Time
			07/28/2026 4:06 PM PDT	

Impressions

07/28/2026 4:14 PM PDT
On the standing AP, lateral, and swimmer's views, skin metallic markers are noted at apparent levels of pain centered at the T1/2 level and the upper T7 level. The multiple lytic lesions throughout the thoracic spine are better visualized on the prior day CT but grossly stable again consistent with bony metastases without definite evidence of gross pathologic fracture. Again there is essential anatomic alignment on the lateral and frontal views. There are mild degenerative disc changes in the mid and lower thoracic spine.

Narrative

07/28/2026 4:14 PM PDT
This result has an attachment that is not available.
EXAMINATION:
XR T SPINE 3 VW

CLINICAL INDICATION:
Localize levels of pain in spine

COMPARISON:
July 27, 2026 thoracic spine MRI and CT..

FINDINGS AND

Procedure Note

MRI C T L SPINE WO/W CONTRAST (MRI C-T-L SPINE WO/W CONTRAST) - Final result (07/27/2026 11:57 PM PDT)

Anatomical Region	Laterality	Modality
C-spine, T-spine, L-spine	N/A	Magnetic Resonance

Specimen (Source)	Anatomical Location / Laterality	Collection Method / Volume	Collection Time	Received Time
			07/28/2026 1:12 AM PDT	

Impressions

07/28/2026 1:42 AM PDT

1. No cord compression. Anterior epidural tumor extension at T5 and T8 levels
Diffuse osseous metastasis multiple cervical, thoracic and lumbar vertebral bodies. Pathologic fractures involving T4, T5 and T8 vertebral bodies with mild height loss at T5 (40%).

This is a preliminary report dictated by Abraham Mengstu M.D., neuroradiology fellow (PGY-6).

Unless an Attending Final Impression appears below, the report has not yet been finalized and an attending radiologist has not reviewed these images.

ATTENDING FINAL REVIEW:

I have personally reviewed the images & agree with the report (or as edited). Bilski grade at T8 is 1C.

I have personally reviewed the images and agree with the report (or as edited).

Narrative

07/28/2026 1:42 AM PDT

This result has an attachment that is not available.

EXAMINATION:
MRI C-T-L SPINE WO/W CONTRAST

CLINICAL INDICATION: Stage IV breast cancer.
metastatic cancer, lytic lesions in spine, spinal stenosis

TECHNIQUE:
MRI Cervical Spine without and with contrast: Extramedullary - tumor (C 4)
Non-contrast: Sag T1, STIR. Ax T1, T2, in-out of phase Post-contrast: Sag , Ax T1 fat sat

MRI Lumbar Spine without and with contrast: extramedullary tumor
Non-contrast: Sagittal T1, T2, STIR. Axial T1, T2, in-out of phase Post-contrast: Sagittal, axial T1 fat sat.

CONTRAST:
GADOTERIDOL 279.3 MG/ML IV SOLN,6 mmol Intravenous,07/27/2026 2357

COMPARISON:
CT 7/27/2026.

FINDINGS:

SPINAL CORD: The conus medullaris terminates at the level of L1-L2, was in normal limits. There is no abnormal cord signal or abnormal cord enhancement.

SPINE: Mild apparent straightening of the normal cervical lordosis could be positional. The normal thoracic kyphosis is maintained. There is mild apparent straightening of the normal lumbar lordosis. Small central disc protrusions are seen at C3-C4, C5-C6 and C6-C7 as well as L2-L3 and L3-L4 resulting in impression of the ventral thecal sac. There is no significant canal or foraminal stenosis.

There is diffuse osseous metastasis in the cervical, thoracic, lumbar and sacral vertebral bodies as well as posterior elements.There are mild compression fractures involving T4, T5 (40% height loss) and T8 vertebral bodies. Possible fluid fluid level at T5 may represent hemorrhage within the vertebral body. L3 vertebral body demonstrates superior and inferior endplate Schmorl's nodules.

There is anterior epidural soft tissue extension at T5 (series 1301 image 10/17) and T8 (series 1601 image 18/62 without cord compression. There may also be possible epidural extension at T4.

CT 7/27/2026.

FINDINGS:

SPINAL CORD: The conus medullaris terminates at the level of L1-L2, was in normal limits. There is no abnormal cord signal or abnormal cord enhancement.

SPINE: Mild apparent straightening of the normal cervical lordosis could be positional. The normal thoracic kyphosis is maintained. There is mild apparent straightening of the normal lumbar lordosis. Small central disc protrusions are seen at C3-C4, C5-C6 and C6-C7 as well as L2-L3 and L3-L4 resulting in impression of the ventral thecal sac. There is no significant canal or foraminal stenosis.

There is diffuse osseous metastasis in the cervical, thoracic, lumbar and sacral vertebral bodies as well as posterior elements.There are mild compression fractures involving T4, T5 (40% height loss) and T8 vertebral bodies. Possible fluid fluid level at T5 may represent hemorrhage within the vertebral body. L3 vertebral body demonstrates superior and inferior endplate Schmorl's nodules.

There is anterior epidural soft tissue extension at T5 (series 1301 image 10/17) and T8 (series 1601 image 18/62 without cord compression. There may also be possible epidural extension at T4.

IMPRESSION

1. No cord compression. Anterior epidural tumor extension at T5 and T8 levels
Diffuse osseous metastasis multiple cervical, thoracic and lumbar vertebral bodies. Pathologic fractures involving T4, T5 and T8 vertebral bodies with mild height loss at T5 (40%).

This is a preliminary report dictated by Abraham Mengstu M.D., neuroradiology fellow (PGY-6).

Unless an Attending Final Impression appears below, the report has not yet been finalized and an attending radiologist has not reviewed these images.

ATTENDING FINAL REVIEW:

I have personally reviewed the images & agree with the report (or as edited). Bilski grade at T8 is 1C.

I have personally reviewed the images and agree with the report (or as edited).

CTA HEAD AND NECK ANGIO - Final result (07/27/2026 8:17 PM PDT)

Anatomical Region	Laterality	Modality
Brain	N/A	Computed Tomography

Specimen (Source)	Anatomical Location / Laterality	Collection Method / Volume	Collection Time	Received Time
			07/27/2026 9:18 PM PDT	

Impressions

07/27/2026 9:48 PM PDT

1. Normal head CT. No acute infarct, hemorrhage or mass effect.
2. Normal CTA head. No high-grade stenosis or occlusion.
3. Normal CTA of the neck vessels. No stenosis, dissection or occlusion.

Internal carotid artery origin stenosis by NASCET criteria: No significant stenosis by NASCET criteria.

ATTENDING COMMENT:
I agree with the preliminary report with the following comments:

Mucous retention cysts in the bilateral maxillary sinuses.

Fetal origin of the left PCA.

Common origin of the left common carotid and right brachiocephalic arteries from the aortic arch.

I have personally reviewed the images and agree with the report (or as edited).

Narrative

07/27/2026 9:48 PM PDT

This result has an attachment that is not available.

EXAMINATION:
CTA HEAD AND NECK ANGIO

CLINICAL INDICATION:
metastatic cancer, pathologic neck fractures, NSGY requesting vascular imaging

TECHNIQUE:
CTA Head and Neck Stroke (N-48)
1. Non-contrast head: Contiguous axial sections were obtained through the head without contrast.
2. CTA Head/Neck: Contiguous axial sections were obtained from the aortic arch to the vertex during bolus infusion of contrast. Slab MIP reformatted images of extracranial and intracranial vessels were obtainedmultiple planes. 3. Post-contrast head: Contiguous axial sections were obtained through the head after contrast injection. Patient age specific scan parameters were used for radiation exposure.

CONTRAST:
IOHEXOL 350 MG/ML IV SOLN,100 mL Intravenous,07/27/2026 2017

COMPARISON:
Same-day CT full spine.

FINDINGS:

NON-CONTRAST HEAD CT:
MASS EFFECT & VENTRICLES: No shift. The lateral ventricles are symmetric. The ventricles, sulci and cisterns are normal.
BRAIN: The brain parenchyma is normal. No acute infarct, hemorrhage or mass lesion is seen.
VASCULAR: Cavernous carotids and vertebral vessels are normal.
EXTRA-AXIAL: Extra-axial spaces are normal.
EXTRA-CRANIAL: Skull and facial bones are normal. Sinuses and mastoids are clear. Bilateral lens placements. Dental hardware..

POST-CONTRAST HEAD CT:
ENHANCEMENT: Normal intracranial enhancement.

HEAD CTA:
ARTERIES: Normal intracranial arteries. No aneurysm, AVM, stenosis or occlusion.
VARIANTS: Fetal origin of the left posterior cerebral artery. The right posterior communicating artery is diminutive..
VEINS: Dural sinuses and deep venous structures are normal.

NECK CTA:
AORTIC ARCH: Aortic arch and great vessel origins are unremarkable, bovine arch.
CAROTIDS: Common carotid vessels are normal. Internal carotid artery origins show no stenosis. Cervical ICA's are normal.
VERTEBRALS: Vertebral artery origins are normal. Cervical vertebral segments are normal.

Diffuse osseous lesions of the spine are described on same-day CT full spine.

Results - documented in this encounter

CT Full Spine with Contrast (CT FULL SPINE W CONTRAST) - Final result (07/27/2026 3:00 PM PDT)

Anatomical Region	Laterality	Modality
Spine	N/A	Computed Tomography

Specimen (Source)	Anatomical Location / Laterality	Collection Method / Volume	Collection Time	Received Time
			07/27/2026 3:46 PM PDT	

Impressions

07/27/2026 5:18 PM PDT

* Extensive lytic osseous metastases involving multilevel vertebral bodies and posterior elements. Redemonstrated age-indeterminant mild pathologic fractures (<25% height loss) in the C4, C6, T1, T4, T5, T8, and L5 levels. Findings are grossly similar to the prior PET/MR.
* No definite new evidence of significant vertebral fracture or subluxation.
* Of note, there are some extra-osseous extension involving left C4/5, left C6/7, and right T8/9 foraminal canals, and S1, S2/3 anterior epidural extension, resulting in spinal canal narrowing as described. Findings are similar to the 07/13/2026 abdominal CT. Consider MRI for evaluation of epidural/ foraminal canal involvement if clinically warranted.
* Of note, the left C4 and C6 lateral process involvement may involve the left V2 vertebral artery. Consider neck CTA to evaluate luminal patency if clinically warranted.

I have personally reviewed the images and agree with the report (or as edited).

Narrative

07/27/2026 5:18 PM PDT

This result has an attachment that is not available.

EXAMINATION:
CT FULL SPINE W CONTRAST

CLINICAL INDICATION:
ACE patient - newly dx metastatic breast cancer. Acute on chronic bilateral cervical pain and left sided thoracic/lumbar pain.

COMPARISON: PET/MR on 07/21/2026; Spinal MRI on 07/01/2026

TECHNIQUE:
Contiguous axial sections were obtained through the cervical, thoracic, and lumbar spine from the occiput through sacrum with contrast.? Sagittal and coronal reformatted images were performed. Patient age specific scan parameters were used for radiation exposure.?

CONTRAST:
IOHEXOL 350 MG/ML IV SOLN,80 mL Intravenous,07/27/2026 1500

FINDINGS:

CERVICAL SPINE:
ALIGNMENT: Straightening alignment. No subluxations.
VERTEBRAE: Multifocal lytic lesions involving in vertebral bodies and posterior elements, for example the C4 lesion involving the left pedicle. Mild height loss of C4 and C6 vertebrae.
CORD: Limited evaluation, grossly unremarkable.
SOFT TISSUES: No appreciable epidural soft tissue mass in this CT exam. Some extra-osseous soft tissue extension of the left C4 and C6 lateral transverse process lytic lesions, resulting in left foraminal canal narrowing.

THORACIC AND LUMBAR SPINE:
ALIGNMENT: Straightening alignment. No subluxations.
VERTEBRAE: Multifocal lytic lesions involving in vertebral bodies and posterior elements, for example the T8 lesion involving the right pedicle. Mild compression fractures (<25%), for example T1, T4, T5, and T8 levels, grossly similar to 07/01/2026 thoracic spine MRI.
CORD: Limited evaluation, grossly unremarkable.
SOFT TISSUES:
* Some extra-osseous soft tissue extension of the right T8 transverse process lytic lesions, resulting in right T8/9 foraminal canal narrowing.
* One dominant S1 lytic lesion with posterior cortical destruction and extra-osseous anterior epidural soft tissue mass, measuring 29 x 34 mm in axial dimensions (304/686). The lesion compresses anterior thecal sac. Another lytic lesion at the S2/3 level also compresses thecal sac and narrows the adjacent right foraminal canal.

EXTRA-SPINAL FINDINGS:
Multifocal lytic lesions involving sternum, ribs, scapulae, and pelvic girdles. Otherwise, no acute findings identified. Please refer to the recent PET/MRI for extraspinal disease.

ONCOLOGY HISTORY

Oncology History Overview

7/1/26: MRI T Spine
IMPRESSION:
Diffusely heterogeneous T1 hypointense and multifocal T2 hyperintense marrow signal including 2.3 x 2.3 cm expansile aneurysmal bone cyst like lesion in T5 vetebral body and similar lesions in T1, T8, T9, T10 and vertebral bodies, as well as 1.2 x 1.1 cm expansile T1 isointense, T2 hyperintense lesion in the posterior elements of T10. Additionally there is a 1.8cm ovoid T2 hyperintense mass in the visualized posterior right liver lobe. While multiple aneurysmal bone cysts is a small possibility, the appearance is highly concerning for metastases from unknown primary. Recommend CT chest, abdomena nd pelvis with contrast or PET/CT for further evaluation.
Compression deformities of T1, T4, T5 and T8 vertebral bodies which may be pathologic.
Mild bilateral neural foraminal narrowing at T8-9 secondary to bony expansion.

7/13/26: CT Chest
IMPRESSION
* Multiple osseous lytic lesions, as described, concerning for a neoplastic process.
* Fracture of the left 11th rib.
* A few scattered nodules, measuring up to 4 mm. In the context of a potential primary malignancy, a follow-up CT of the chest in 3 months is advised.

7/13/26: CT A/P
IMPRESSION
Diffuse lytic bone lesions throughout the spine and pelvis without CT evidence of primary malignancy in the abdomen or pelvis.
Small bilateral ovarian cysts would be better characterized on transvaginal ultrasound.

7/22/26 PET/MR: Lt breast lesion 3.3x2.4cm SUVmax 1.9 with Rt axillary node 9x8mm SUVmax 2.0. Innumerable bony foci including compression fractures of T4, T8, L5.
[image]

INTERVAL HISTORY

Yvonne presents to ACE via referral from primary oncology team for evaluation of acute on chronic neck and back pain with muscle spasms.

She developed acute, severe neck and back pain with muscle spasms beginning last night around 10 pm. Patient reports that she has had ongoing cervical and thoracic back pain iso newly diagnosed lytic lesions with undiagnosed primary; however, this pain has significantly worsened with muscle tightness in the neck, shoulder blades, and left thoracic/lumbar region. She is unable to lay down or move without debilitating pain and slept sitting up due to discomfort. She describes a sensation that her head is "too heavy" for her neck and expresses concern about rapid progression of symptoms.

Her current pain regimen includes oxycodone 5-10 mg every four hours and tylenol, with minimal relief. She has not been on a long-acting opioid. She also uses prochlorperazine for nausea; however, endorses poor appetite.

She had an appointment with radiation oncology today for a CT simulation for planned palliative radiation treatment. She denies lightheadedness, dizziness, chest pain, shortness of breath, abdominal pain, nausea, vomiting, new bladder or bowel dysfunction, new swelling or pain in her legs, or weakness or sensory changes in her extremities.

REVIEW OF SYSTEMS

Review of Systems
Constitutional: Negative for fever.
Cardiovascular: Negative for chest pain and dyspnea on exertion.
Respiratory: Negative for cough and shortness of breath.
Musculoskeletal: Positive for back pain, neck pain and stiffness. Negative for muscle weakness.
Gastrointestinal: Negative for abdominal pain, change in bowel habit, nausea and vomiting.
Genitourinary: Negative for dysuria.
Neurological: Negative for dizziness, headaches, light-headedness, numbness, paresthesias and sensory change.
Psychiatric/Behavioral: Negative for altered mental status.

IMAGING/PERTINENT STUDIES

Ultrasound Guided Axillary Lymph Node Biopsy Right
Addendum: Pathology results reveal axillary node with metastatic carcinoma which is malignant and concordant with the imaging findings.

Recommend referral to Multidisciplinary Clinic. Breast MRI is also recommended for further evaluation of extent of disease.

These pathology findings and recommendations were reported to the patient by Jessica Hui on 7/27/2026 at 1556.
Narrative: Examination:
Ultrasound Guided Axillary Lymph Node Biopsy Right
The procedure was explained to the patient including benefits and alternatives. The risks, including but not limited to infection, bleeding, pain, and/or inadequate sampling were reviewed. The patient agreed to undergo the procedure and signed the consent form.

Ultrasound Guided Axillary Lymph Node Biopsy Right:
Images of the lymph node in the right axilla were obtained. The axilla was prepped for the procedure and the area was anesthetized with a local anesthetic. A Core Biopsy Needle was placed in the target using a lateral approach. Two specimens were obtained. A biopsy marker clip was placed at the site of the core biopsy.

The patient experienced no complications during the procedure. The estimated blood loss for the procedure was <5 cc.

Medication dose given
lidocaine (Xylocaine) 1 % injection 10 mL (4 mL Intradermal Given 7/22/26 1445)

A post procedure right digital mammogram confirms the biopsy marker clip is in the appropriate position

I, Dr. Matthew Duke Phelps, was present for the entire procedure. I have personally reviewed these images and I agree with the report above.

At this time, pathology is pending. This report will be addended when the final pathology report of the biopsy specimen is received.

Impression:
Single Site Right Ultrasound Guided Axillary Lymph Node Biopsy complete.
US Guided Breast Biopsy Left, Post Procedure Diagnostic Mammography Left
Addendum: Pathology results reveal invasive lobular carcinoma which is malignant and concordant with the imaging findings.

Recommend referral to Multidisciplinary Clinic. Breast MRI is also recommended for further evaluation of extent of disease.

These pathology findings and recommendations were reported to the patient by Jessica Hui on 7/27/26 at 1556.
Narrative: Examination:
Ultrasound Guided Breast Biopsy Left
Post Procedure Diagnostic Mammography Left
The procedure was explained to the patient including benefits and alternatives. The risks, including but not limited to infection, bleeding, pain, and/or inadequate sampling were reviewed. The patient agreed to undergo the procedure and signed the consent form.

Ultrasound Guided Breast Biopsy Left:
The patient's left breast was imaged and images of the mass in the upper outer quadrant at 1 o'clock at a distance of 7 cm from the nipple were obtained. The breast was prepped for the procedure and the area was anesthetized with a local anesthetic. A Core Biopsy Needle was placed in the target using a lateral approach. Three specimens were obtained. A biopsy marker clip was placed at the site of the core biopsy.

The patient experienced no complications during the procedure. The estimated blood loss for the procedure was <5 cc.

Medication dose given
lidocaine (Xylocaine) 1 % injection 10 mL (4 mL Intradermal Given 7/22/26 1446)

A post procedure left digital mammogram confirms the biopsy marker clip is in the expected position

I, Dr. Matthew Duke Phelps, was present for the entire procedure. I have personally reviewed these images and I agree with the report above.

At this time, pathology is pending. This report will be addended when the final pathology report of the biopsy specimen is received.

Impression:
Single Site Left Ultrasound Guided Breast Biopsy complete.
XR T Spine 3 Vw
Narrative: EXAMINATION:
XR T SPINE 3 VW

CLINICAL INDICATION:
Localize levels of pain in spine

COMPARISON:
July 27, 2026 thoracic spine MRI and CT..

FINDINGS AND
Impression: On the standing AP, lateral, and swimmer's views, skin metallic markers are noted at apparent levels of pain centered at the T1/2 level and the upper T7 level. The multiple lytic lesions throughout the thoracic spine are better visualized on the prior day CT but grossly stable again consistent with bony metastases without definite evidence of gross pathologic fracture. Again there is essential anatomic alignment on the lateral and frontal views. There are mild degenerative disc changes in the mid and lower thoracic spine.
MRI C-T-L Spine w wo Contrast
Narrative: EXAMINATION:
MRI C-T-L SPINE WO/W CONTRAST

CLINICAL INDICATION: Stage IV breast cancer.
metastatic cancer, lytic lesions in spine, spinal stenosis

TECHNIQUE:
MRI Cervical Spine without and with contrast: Extramedullary - tumor (C 4)
Non-contrast: Sag T1, STIR. Ax T1, T2, in-out of phase Post-contrast: Sag , Ax T1 fat sat

MRI Lumbar Spine without and with contrast: extramedullary tumor
Non-contrast: Sagittal T1, T2, STIR. Axial T1, T2, in-out of phase Post-contrast: Sagittal, axial T1 fat sat.

CONTRAST:
GADOTERIDOL 279.3 MG/ML IV SOLN,6 mmol Intravenous,07/27/2026 2357

COMPARISON:

CT 7/27/2026.

FINDINGS:

SPINAL CORD: The conus medullaris terminates at the level of L1-L2, was in normal limits. There is no abnormal cord signal or abnormal cord enhancement.

SPINE: Mild apparent straightening of the normal cervical lordosis could be positional. The normal thoracic kyphosis is maintained. There is mild apparent straightening of the normal lumbar lordosis. Small central disc protrusions are seen at C3-C4, C5-C6 and C6-C7 as well as L2-L3 and L3-L4 resulting in impression of the ventral thecal sac. There is no significant canal or foraminal stenosis.

There is diffuse osseous metastasis in the cervical, thoracic, lumbar and sacral vertebral bodies as well as posterior elements.There are mild compression fractures involving T4, T5 (40% height loss) and T8 vertebral bodies. Possible fluid fluid level at T5 may represent hemorrhage within the vertebral body. L3 vertebral body demonstrates superior and inferior endplate Schmorl's nodules.

There is anterior epidural soft tissue extension at T5 (series 1301 image 10/17) and T8 (series 1601 image 18/62 without cord compression. There may also be possible epidural extension at T4.
Impression: 1. No cord compression. Anterior epidural tumor extension at T5 and T8 levels
Diffuse osseous metastasis multiple cervical, thoracic and lumbar vertebral bodies. Pathologic fractures involving T4, T5 and T8 vertebral bodies with mild height loss at T5 (40%).

This is a preliminary report dictated by Abraham Mengstu M.D., neuroradiology fellow (PGY-6).

Unless an Attending Final Impression appears below, the report has not yet been finalized and an attending radiologist has not reviewed these images.

ATTENDING FINAL REVIEW:

I have personally reviewed the images & agree with the report (or as edited). Bilski grade at T8 is 1C.

I have personally reviewed the images and agree with the report (or as edited).

ASSESSMENT/PLAN

Assessment & Plan
Yvonne K Franklin is a 47-year-old female with cancer of metastatic breast cancer with diffuse lytic bone lesions and pathologic vertebral fractures. Patient's pathology came back today and she has not established with breast oncology to discuss treatment.

Patient presents today with chief complaint of significant worsening of neck and back pain.

In ACE, afebrile, BP 134/91 mmHg, HR 92, RR 18, SpO2 100% on RA. Initially experiencing 10/10 neck pain despite taking extra dose of 10 mg oxycodone.

Work-up:
- CMP overall stable
- CBC overall stable

Ordered CT full spine to further assess acute on chronic spinal pain that is impacting ADLs.

Resuscitated with 1 mg IV, 0.5 mg IV, 1 mg IV dilaudid. Pain temporarily improved with each dose of dilaudid; however, relief did not last long.

Upon reassessment, patient does not feel that she can go home given the significant amount of pain and inability to ambulate or complete ADLs secondary to pain.

I reviewed findings relevant to this acute encounter with the patient along with plan of care as below:

#Acute on chronic cancer related pain
#Metastatic breast cancer with extensive lytic osseous involvement
Acute neck and back pain with significant progression over past 24 hours. CT spine shows lytic osseous metastases involving multilevel vertebra. Unable to independently walk or move neck thus admitting for ongoing pain mgmt and further work-up.
- Neurosurgery requesting full spine MRI w and w/o contrast and neck CTA
- Spoke with IP team. Will admit for pain mgmt and consult IR and radiation oncology
- Sending to ED given no availability for direct admission
- Palliative care referral placed; spoke with palliative care who recommended morphine 30 mg BID and methocarbamol 750 TID for OP management but will defer to IP team
- OP FHCC will get patient established with breast oncology

DISPOSITION
Patient discharged from ACE in stable condition and brought to ED.

FOLLOW UP
- Per IP recommendations

ATTESTATION
I spent 75 minutes on the care of this patient today including medical records review, assessment, diagnosis, management, documentation and care coordination with the patient's primary oncology team, neurosurgery, ED attending, IP team, and ACE team.

Subjective / Visit Information:

Reason for Visit: Follow-Up (ACE upper back and neck)

Objective:
Vitals:

	07/27/26 1244
Temp:	36.5 °C
Pulse:	92
BP:	**(!) 134/91**

Resp:	18
SpO2:	100%

?

Assessment and Plan:

Hand off: Yes APP handoff to ED attending

Discharge:
Patient tolerated treatment well and without complications.
Discharge disposition:
Accompanied by: Family
Discharged to: Emergency Room
Response: Aware of existing appointments, Aware of clinic contact information, States understanding of plan, Restates plan, and No further questions
Preferred language: English
Interpretation/Language Services: No Interpreter

Summary: Pt arrived via ambulation with spouse after getting mapping done in radiology. Reports severe 10/10 spasming of upper back and neck. Reports upper back has been ongoing but the neck is what started to get worse last night. Reports her neck and back is "seizing up and spasms". Reports chills. Denies fevers, SOB, chest pain, dizziness, changes in sensation, or weakness. Reports bowel and urination has remained normal. PIV 20G places, tolerated well, labs collected. CT full spine with contrast completed. Received IV Hydromorphone x3 with moderate effect but still very stiff and finding difficult to perform ADLs. Pt agreed to needing further workup for pain management. APP gave handoff to ED Attending. Pt stable and transferred via wheelchair by staff with partner to ED due to no bed availability per APP.

Additional documentation may exist in Flowsheets or Education Activity

Miscellaneous Notes - documented in this encounter

Telephone Encounter - Allyson E - 07/27/2026 9:54 AM PDT

Formatting of this note might be different from the original.

RN called to discuss note from after hours triage regarding her pain in her right side of neck. She reports not being able to find a comfortable position and was unable to lay dow. Had not slept well r/t pain. Called the triage line and they recommended to see her in ACE.

RN spoke to patient on the phone and confirmed that her pain was still a 10/10 and having difficulty holding up her head feeling that it "was really heavy".

RN spoke to the ACE provider and was able to get her in to the ACE clinic at the UW for further evaluation.

RN placed follow up reminder.

Electronically signed by Allyson E at 07/27/2026 9:59 AM PDT

Miscellaneous Notes - documented in this encounter

Telephone Encounter - Eric Vickrey - 07/27/2026 5:29 AM PDT

Formatting of this note might be different from the original.

FHCC After-Hours Triage

Yvonne K Franklin is a 47-year-old female with cancer of unknown primary with diffuse lytic bone lesions and pathologic vertebral fractures.

Her husband, Mark, called triage reporting that Yvonne has developed increased pain in her neck and upper back over the last few hours. Having a hard time finding a comfortable position. No relief with oxycodone 10 mg taken at 10pm (almost 3 hours ago). Denies radiating pain, extremity numbness or weakness, urinary or stool incontinence.

I advised her to take another 5 mg of oxycodone now along with 1,000 of tylenol.

She has an appointment with rad-onc at UW in the morning. May need urgent imaging if pain persists. Will cc Dr. Shepherd (rad-onc) and ACE clinic for possible evaluation.

Eric Vickrey, PA-C

Electronically signed by Eric Vickrey at 07/27/2026 5:40 AM PDT

Progress Notes - documented in this encounter

Zena C - 07/27/2026 10:30 AM PDT

Formatting of this note might be different from the original.

Radiation Treatment Plan:

Consent07/27/26

RN Teach07/27/26

SIM07/27/26

Radiation Treatment Site: thoracic spine

# of Fractions: TBD

RN met with patient in clinic. She ambulates independently. She was accompanied by her husband, Mark.

RN provided verbal and written information about the CT simulation, radiation treatment, and possible side effects, including fatigue, dermatitis, esophagitis, and pain flare.

Advised pt not to apply lotion or ointment to skin in Tx area prior to RT.

Confirmed pt does not have a pacemaker.

Provided business card with clinic contact information.

Electronically signed by Zena C at 07/27/2026 11:54 AM PDT

Discharge Instructions - documented in this encounter

Discharge Instructions
Zion M - 07/24/2026 12:46 PM PDT
Formatting of this note is different from the original.
Images from the original note were not included.
Radiology Nurse Line: 206.744.6521
Hours: 7am-7pm Monday through Friday
Urgent after hours: Call 206.744.3000 and ask the operator to page "MSK Fellow on call"

After Your Bone Biopsy: Precautions and self-care
Follow These Instructions Carefully
Precautions
The medicine that was used to sedate you (make you relaxed and sleepy) will be in your system for several hours after your biopsy. It could affect your thinking during this time.
Because of this, for 24 hours after your biopsy:
Do not drive a car or use machinery.
Do not drink alcohol.
Do not take tranquilizers, sleeping pills, or similar medicines unless your doctor prescribes them for you.
Self-care to Help Your Recovery
We strongly advise you to do only light activity and to get plenty of rest. Do not do any strenuous work.
Do not lift more than 10 pounds for 48 hours.
Keep your biopsy site clean and dry for 24 hours. After that, you can remove the dressing and you may shower as usual.
Do not put creams or lotions on your biopsy site for about a week.
If you wish, you may cover your biopsy site with a Band-Aid until it is healed. If you do use a Band-Aid:
Change the Band-Aid every day.
Watch the biopsy site over the next few days for any of the signs listed under “When to Call the Clinic” listed below.
You can resume your usual medications after the procedure.
Some soreness at the site is expected. Take Tylenol (Acetaminophen) or your home pain medication for relief. Call us or your doctor's clinic if the pain is not improving after 2-3 days.

When to Call the Clinic
It is normal to have some discomfort or bruising at the biopsy site for several days. But, call the number below if you have:
Bleeding.
Swelling.
Signs of infection:
Redness.
Warmth
Discharge
Fever higher than 100°F (37.8°C) or chills.
Rapid heart rate.

prochlorperazine 10 MG tablet	Take 1 tablet by mouth every 6 hours as needed.			07/24/2026	
propranolol 10 MG tablet	Take 1 tablet by mouth daily.				
oxyCODONE 5 MG tablet	Take 1-2 tablets by mouth every 4 hours as needed for moderate pain.	100 tablet		07/17/2026	07/30/2026

Miscellaneous Notes - documented in this encounter

Brief Procedure Note - Terrence Li - 07/24/2026 12:25 PM PDT

Formatting of this note might be different from the original.

PROCEDURE

Name of Procedure: CT guided right iliac biopsy
Procedure description: See imagine/pathology report

OPERATORS

Attending: Chankue Park, MD
Fellow: Terrence Li, MD

SAMPLES AND SPECIMENS

Under incremental CT guidance, a coaxial 14 gauge bone needle was advanced into the cortex. 18-gauge soft tissue needle was advanced into the right iliac and 4 samples of 1-2 cm tan white tissue were obtained along with multiple fragmented tissues.

COMPLICATIONS

None

ESTIMATED BLOOD LOSS

< 25 ml

DIAGNOSTIC STATUS

Post procedure diagnosis: Pending

Electronically signed by Terrence Li at 07/24/2026 12:37 PM PDT

Procedure Nursing Note - Michael L - 07/24/2026 12:25 PM PDT

Formatting of this note might be different from the original.

Pt underwent moderate sedation for CT guided bone biopsy procedure.

Of note pre-procedurally, pt had an allergy to fentanyl listed in her chart, indicating PVCs as a severe reaction to the medication. Sedation, analgesia, and comfort discussed between the patient, attending, and sedation RN at length in preparation for the procedure, and pt exhibited some skepticism towards her allergy and indicating being receptive to receiving fentanyl for her procedure.

Because pt would monitored closely on telemetry, it was agreed that the procedure would begin with a "trial" dose of 25mcg IV fentanyl followed by a short monitoring period to ensure that there were no EKG changes.
Pt tolerated her initial dose of fentanyl with no issues, and so the procedure proceeded with moderate sedation utilizing IV fentanyl and midazolam for pt comfort. Two isolated PVCs were observed through the procedure (approximately 45 minute duration). Pt remained on room air with SpO2 of 100% and appropriate ETCO2 readings. BP steadily trended downward with sedation doses to a low of 85/52 towards the end of the procedure but improved shortly after, as sedation wore off.

After procedure, pt was monitored for a period where occasional, isolated PVCs were observed.

Impressions

07/24/2026 12:48 PM PDT

Technically successful and uneventful CT guided core needle biopsy of the right iliac lesion.

PRESENCE STATEMENT:
I, Dr. Chankue Park, was present during the entire procedure. I have personally reviewed the images and agree with the report (or as edited).

I have personally reviewed the images and agree with the report (or as edited).

Narrative

07/24/2026 12:48 PM PDT

This result has an attachment that is not available.

EXAMINATION:
CT SUPERFICIAL BONE BX

CLINICAL INDICATION:
widespread bony mets, unkonwn primary, likely solid tumor.

PREPROCEDURE:
CT reveals lytic lesion over the right iliac bone.

TECHNIQUE:
Details of the procedure were discussed with the patient and written informed consent was obtained. Specifically, the risks, benefits, and alternatives of the procedure were discussed, including, but not limited to, bleeding, infection, pain, damage to adjacent structures, and nondiagnostic specimen. The patient was able to ask questions, indicated their understanding, and agreed to proceed.

A final time out was performed prior to commencing with the procedure.

SEDATION:
Incremental doses of intravenous midazolam and fentanyl was administered by the radiology nurse for moderate sedation with direct monitoring by the attending physician. Continuous hemodynamic and respiratory monitoring was performed throughout and following the procedure.

Duration of sedation: 60 minutes with 200 mcg fentanyl and 4mg versed. Please refer to sedation report for further details.

PROCEDURE:
The patient was directed into the supine. Skin over the right iliac was marked with CT guidance. The skin was then cleansed and draped. Adequate local anesthesia was achieved with subcutaneous 1% lidocaine. Under incremental CT guidance, a 14-gauge Bonopty coaxial penetrating needle was advanced through the cortex. An 18-gauge soft tissue biopsy needle was then advanced through the coaxial system into the right anterior iliac crest lytic lesion. 4 samples of 1-2 cm tan white tissue were obtained along with multiple fragmented tissues.

Needle was removed and hemostasis easily achieved. No immediate complications.

POSTPROCEDURE:
CT did not reveal any complications such as significant hemorrhage or pneumothorax.

Postprocedure orders were given to the patient and were documented in the patient's chart. Patient was sent to the floor with no discomfort or pain and in stable condition.

Specimen was sent to pathology department.

Procedure Note

PROCEDURE:
The patient was directed into the supine. Skin over the right iliac was marked with CT guidance. The skin was then cleansed and draped. Adequate local anesthesia was achieved with subcutaneous 1% lidocaine. Under incremental CT guidance, a 14-gauge Bonopty coaxial penetrating needle was advanced through the cortex. An 18-gauge soft tissue biopsy needle was then advanced through the coaxial system into the right anterior iliac crest lytic lesion. 4 samples of 1-2 cm tan white tissue were obtained along with multiple fragmented tissues.

Needle was removed and hemostasis easily achieved. No immediate complications.

POSTPROCEDURE:
CT did not reveal any complications such as significant hemorrhage or pneumothorax.

Postprocedure orders were given to the patient and were documented in the patient's chart. Patient was sent to the floor with no discomfort or pain and in stable condition.

Specimen was sent to pathology department.

IMPRESSION
Technically successful and uneventful CT guided core needle biopsy of the right iliac lesion.

PRESENCE STATEMENT:
I, Dr. Chankue Park, was present during the entire procedure. I have personally reviewed the images and agree with the report (or as edited).

I have personally reviewed the images and agree with the report (or as edited).

Addendum 1	ADDENDUM REASON: This addendum is issued to report ER, PR, and HER2 testing. See Biomarker Summary template below. HER2 FISH studies have also been ordered and will be reported in a subsequent addendum. Biomarkers Disclaimer All controls show appropriate reactivity. ER/PR and HER2 immunohistochemical analyses are performed in accordance with the ASCO/CAP guidelines [1,2]. Department of Pathology protocols dictate that breast cancer containing tissue will be fixed in 10% neutral buffered formalin for a minimum of 6 hours to a maximum of 72 hours at room temperature for ER/ PR and HER2, unless otherwise noted in this report. All breast core biopsy specimens are rapidly immersed in formalin (Cold ischemia time is within required one hour). The detection system used is Roche Ultraview Universal DAB Detection Kit. The Criteria used to determine a positive vs. negative result, and scoring system (eg, percent of stained cells, staining pattern) are those recommended by ASCO/ CAP [1,2]. The interpretation is reported according to the CAP Reporting Template for			08/13/2026 1:52 PM PDT	UNIVERSITY OF WASHINGTON MEDICAL CENTER PATHOLOGY	Addendum electronically signed by Alvarez, Rebeca, MD on 8/6/2026 at 1333 PDT

	Reporting Results of Biomarker Testing of Specimens from Patients with Carcinoma of the Breast. Cases with 2+ (equivocal) HER2 staining will be tested for gene amplification using validated fluorescent in-situ hybridization (FISH) technique. These assays have not been validated on decalcified tissues. Results using decalcified tissues should be interpreted with caution, given the likelihood of false negativity in this testing environment. When the above stain result indicates 'Quantitative Evaluation', a manual morphometric scoring of the stain was performed. REFERENCES: 1. Allison KH, Hammond EH, Dowsett M, et al. Component	Value	Ref Range	Test Method	Analysis Time	Performed At	Pathologist Signature
	ISH Results: This sample has a Group 4 result (ratio less than 2.0; greater than or equal to 4.0 and less than 6.0 HER2 signals / cell). It is uncertain whether patients with greater than or equal to 4.0 and less than 6.0 average HER2 signals / cell and HER2 / CEP17 ratio less than 2.0 benefit from HER2 targeted therapy in the absence of protein overexpression (IHC 3+). If the specimen test result is close to the ISH ratio threshold for positive, there is a high likelihood that repeat testing will result in different results by chance alone. Therefore, when IHC results are not 3+ positive, it is recommended that the sample be considered HER2 negative without additional testing on the same specimen. METHODS Cold Ischemia and Fixation Times: Cannot be determined: Cold ischemia and formalin fixation times not documented. Fixative: Formalin HER2 ISH Testing Methodology: HER2 ISH Test Type: Food and Drug Administration (FDA) cleared (test / vendor): Path Vysion Her-2 DNA probe kit/Abbott Molecular

Telephone Encounter - Ann-Lisa G - 07/23/2026 8:26 PM PDT

Formatting of this note might be different from the original.

Oncology Telephone Triage Note

Subjective / Visit Information:

Reason for Call: Triage (Headache, nausea)

Assessment and Plan:

Call Summary: Yvonne reports headache X 2 days and nausea that started this morning. She rates the headache 6/10 on pain scale and describes it as a "regular" headache. She denies fever, vomiting, diarrhea, blurry vision, stiff neck.

Per APP J Chang, ok to take dose of Tylenol tonight. Advised her to call back if symptoms are not improving or worsening.

Response: Yvonne states understanding and is agreeable to this plan.

Additional documentation may exist in Flowsheets or Education Activity

Electronically signed by Ann-Lisa G at 07/23/2026 8:34 PM PDT

Results - documented in this encounter

POST PROCEDURE DIAG MAMMOGRAPHY LEFT - Edited Result - FINAL (07/22/2026 2:58 PM PDT)

Anatomical Region	Laterality	Modality
Breast	Left	Mammography

Specimen (Source)	Anatomical Location / Laterality	Collection Method / Volume	Collection Time	Received Time

Addenda

Addendum on 07/28/2026 4:42 PM PDT
Pathology results reveal invasive lobular carcinoma which is malignant and concordant with the imaging findings.

Recommend referral to Multidisciplinary Clinic. Breast MRI is also recommended for further evaluation of extent of disease.

These pathology findings and recommendations were reported to the patient by Jessica Hui on 7/27/26 at 1556.

Narrative

07/22/2026 4:11 PM PDT
This result has an attachment that is not available.
Examination:
Ultrasound Guided Breast Biopsy Left
Post Procedure Diagnostic Mammography Left
The procedure was explained to the patient including benefits and alternatives. The risks, including but not limited to infection, bleeding, pain, and/or inadequate sampling were reviewed. The patient agreed to undergo the procedure and signed the consent form.

Ultrasound Guided Breast Biopsy Left:
The patient's left breast was imaged and images of the mass in the upper outer quadrant at 1 o'clock at a distance of 7 cm from the nipple were obtained. The breast was prepped for the procedure and the area was anesthetized with a local anesthetic. A Core Biopsy Needle was placed in the target using a lateral approach. Three specimens were obtained. A biopsy marker clip was placed at the site of the core biopsy.

The patient experienced no complications during the procedure. The estimated blood loss for the procedure was <5 cc.

Medication dose given
lidocaine (Xylocaine) 1 % injection 10 mL (4 mL Intradermal Given 7/22/26 1446)

A post procedure left digital mammogram confirms the biopsy marker clip is in the expected position

I, Dr. Matthew Duke Phelps, was present for the entire procedure. I have personally reviewed these images and I agree with the report above.

At this time, pathology is pending. This report will be addended when the final pathology report of the biopsy specimen is received.

Impression:
Single Site Left Ultrasound Guided Breast Biopsy complete.

Fred Hutch Cancer Center / UW Medicine
Radiation Oncology New Patient Visit

Distant Site Telemedicine Encounter
I conducted this encounter via secure, live, face-to-face video conference with the patient. I reviewed the risks and benefits of telemedicine as pertinent to this visit and the patient agreed to proceed.

Provider Location: On-site location (clinic, hospital, on-site office)
Patient Location: on the road after her breast biopsy with her husband driving
Present with patient: Family member

Patient Care Team:
Purcell, William Thomas, MD as Oncologist (Hematology-Oncology)

PCP: Paras, Leilani D, MD

Referrer: Keith David Eaton

Patient summary
Yvonne K Franklin is a 47 year old female with cancer of unknown primary, possibly breast s/p breast biopsy 7/22/26 pending bone biopsy 7/24/26. She presents for discussion of radiotherapy.

Oncology History Overview Note

7/1/26: MRI T Spine
IMPRESSION:
Diffusely heterogeneous T1 hypointense and multifocal T2 hyperintense marrow signal including 2.3 x 2.3 cm expansile aneurysmal bone cyst like lesion in T5 vetebral body and similar lesions in T1, T8, T9, T10 and vertebral bodies, as well as 1.2 x 1.1 cm expansile T1 isointense, T2 hyperintense lesion in the posterior elements of T10. Additionally there is a 1.8cm ovoid T2 hyperintense mass in the visualized posterior right liver lobe. While multiple aneurysmal bone cysts is a small possibility, the appearance is highly concerning for metastases from unknown primary. Recommend CT chest, abdomena nd pelvis with contrast or PET/CT for further evaluation.
Compression deformities of T1, T4, T5 and T8 vertebral bodies which may be pathologic.
Mild bilateral neural foraminal narrowing at T8-9 secondary to bony expansion.

7/13/26: CT Chest
IMPRESSION
* Multiple osseous lytic lesions, as described, concerning for a neoplastic process.
* Fracture of the left 11th rib.
* A few scattered nodules, measuring up to 4 mm. In the context of a potential primary malignancy, a follow-up CT of the chest in 3 months is advised.

7/13/26: CT A/P
IMPRESSION
Diffuse lytic bone lesions throughout the spine and pelvis without CT evidence of primary malignancy in the abdomen or pelvis. Small bilateral ovarian cysts would be better characterized on transvaginal ultrasound.

7/22/26 PET/MR: Lt breast lesion 3.3x2.4cm SUVmax 1.9 with Rt axillary node 9x8mm SUVmax 2.0. Innumerable bony foci including compression fractures of T4, T8, L5.
[image]

No problem history exists.

Pain
Pain Score: 5 - Moderate (7/15/2026 4:08 PM)

Safety and Mobility
Have you fallen in the past year?: No (7/15/2026 4:08 PM)

Interval history

Today, Ms. Franklin presents with her husband on Zoom.

She reports a sharp pain over Rt buttock when putting pressure on Rt foot including walking, going to sit down, turning side to side. The pain shoot ups a little bit above buttock up back but largely localized. She is using oxycodone 5mg tab q4h with partial relief.

Wt Readings from Last 9 Encounters:

07/21/26	55.7 kg (122 lb 12.7 oz)
07/15/26	56.7 kg (125 lb)

Imaging and pathology
Reviewed in HPI

Ultrasound Guided Axillary Lymph Node Biopsy Right
Examination:
Ultrasound Guided Axillary Lymph Node Biopsy Right
The procedure was explained to the patient including benefits and alternatives. The risks, including but not limited to infection, bleeding, pain, and/or inadequate sampling were reviewed. The patient agreed to undergo the procedure and signed the consent form.

Ultrasound Guided Axillary Lymph Node Biopsy Right:
Images of the lymph node in the right axilla were obtained. The axilla was prepped for the procedure and the area was anesthetized with a local anesthetic. A Core Biopsy Needle was placed in the target using a lateral approach. Two specimens were obtained. A biopsy marker clip was placed at the site of the core biopsy.

The patient experienced no complications during the procedure. The estimated blood loss for the procedure was <5 cc.

Medication dose given
lidocaine (Xylocaine) 1 % injection 10 mL (4 mL Intradermal Given 7/22/26 1445)

A post procedure right digital mammogram confirms the biopsy marker clip is in the appropriate position

I, Dr. Matthew Duke Phelps, was present for the entire procedure. I have personally reviewed these images and I agree with the report above.

At this time, pathology is pending. This report will be addended when the final pathology report of the biopsy specimen is received.

Impression:
Single Site Right Ultrasound Guided Axillary Lymph Node Biopsy complete.
US Guided Breast Biopsy Left, Post Procedure Diagnostic Mammography Left
Examination:
Ultrasound Guided Breast Biopsy Left
Post Procedure Diagnostic Mammography Left
The procedure was explained to the patient including benefits and alternatives. The risks, including but not limited to infection, bleeding, pain, and/or inadequate sampling were reviewed. The patient agreed to undergo the procedure and signed the consent form.

Ultrasound Guided Breast Biopsy Left:
The patient's left breast was imaged and images of the mass in the upper outer quadrant at 1 o'clock at a distance of 7 cm from the nipple were obtained. The breast was prepped for the procedure and the area was anesthetized with a local anesthetic. A Core Biopsy Needle was placed in the target using a lateral approach. Three specimens were obtained. A biopsy marker clip was placed at the site of the core biopsy.

The patient experienced no complications during the procedure. The estimated blood loss for the procedure was <5 cc.

Medication dose given
lidocaine (Xylocaine) 1 % injection 10 mL (4 mL Intradermal Given 7/22/26 1446)

A post procedure left digital mammogram confirms the biopsy marker clip is in the expected position

I, Dr. Matthew Duke Phelps, was present for the entire procedure. I have personally reviewed these images and I agree with the report above.

At this time, pathology is pending. This report will be addended when the final pathology report of the biopsy specimen is received.

Impression:
Single Site Left Ultrasound Guided Breast Biopsy complete.

Assessment
Yvonne K Franklin is a 47 year old with cancer of unknown primary, possibly Lt breast s/p biopsy Lt breast and Rt axilla 7/22/26 with pending bone biopsy 7/24/26.

We discussed the rationale for and the specifics of treatment.

Given her initial diagnosis and diffuse bony disease, pinpointing the area of pain may be difficult. I suspect her pain could be from Rt ilium, Rt sacum, or L5 compression fracture. During CT-sim, we will place BBs over the location(s) of her pain to help us target.

I plan to treat with 3D conformal technique. Pain relief is equivalent between single fraction vs. multifractionated regimen. The main advantage of multifractionated regimen is a decrease in need for retreatment (about 10 vs 20% at 6 months). About 15% of patients have a complete pain response and 50% have a partial pain response (total of 65% have pain response)

I am thinking of a single fraction of 8 Gy x1 due to low confidence of being able to pinpoint a focus.

If during CT-sim, I am more confident, I may increase dose to 20 Gy/5 fx.

I discussed we would wait for pathology to return a diagnosis of cancer before starting radiation. Some hematologic cancers can respond just as quickly to systemic therapy.

Plan
We discussed in detail the potential risks, benefits, side effects, and alternatives to radiation therapy. Side effects include but are not limited to:
Acute: fatigue, pain flare, nauseas, runny stools
Late: secondary malignancy (>10 years out)

All questions were addressed. The patient agrees with the recommended plan.

-bone biopsy 7/24/26
-CT-simulation already scheduled for Monday 7/27/26
-if pathology results in cancer, plan for either 8 Gy x1 if unsure about target or a higher dose such as 20 Gy/5 fx if physical exam suggests a clearer etiology for her pain.

I spent a total of 60 minutes for the patient's care on the date of the service independent from other healthcare team members. This time encompasses review of records, personal review of imaging, face-to-face discussion with patient, placing orders/referrals, care coordination, and documentation. I provided longitudinal care for complex and serious medical problems.

Past Medical History:

Diagnosis	Date	
•	Breast cyst	Always

Current Outpatient Medications:
• oxyCODONE 5 MG tablet, Take 1-2 tablets by mouth every 4 hours as needed for moderate pain., Disp: 100 tablet, Rfl: 0
• propranolol 10 MG tablet, Take 1 tablet by mouth daily., Disp: , Rfl:

Addenda

Addendum on 07/28/2026 4:42 PM PDT
Pathology results reveal axillary node with metastatic carcinoma which is malignant and concordant with the imaging findings.

Recommend referral to Multidisciplinary Clinic. Breast MRI is also recommended for further evaluation of extent of disease.

These pathology findings and recommendations were reported to the patient by Jessica Hui on 7/27/2026 at 1556.

Narrative

07/22/2026 4:11 PM PDT
This result has an attachment that is not available.
Examination:
Ultrasound Guided Axillary Lymph Node Biopsy Right
The procedure was explained to the patient including benefits and alternatives. The risks, including but not limited to infection, bleeding, pain, and/or inadequate sampling were reviewed. The patient agreed to undergo the procedure and signed the consent form.

Ultrasound Guided Axillary Lymph Node Biopsy Right:
Images of the lymph node in the right axilla were obtained. The axilla was prepped for the procedure and the area was anesthetized with a local anesthetic. A Core Biopsy Needle was placed in the target using a lateral approach. Two specimens were obtained. A biopsy marker clip was placed at the site of the core biopsy.

The patient experienced no complications during the procedure. The estimated blood loss for the procedure was <5 cc.

Medication dose given
lidocaine (Xylocaine) 1 % injection 10 mL (4 mL Intradermal Given 7/22/26 1445)

A post procedure right digital mammogram confirms the biopsy marker clip is in the appropriate position

I, Dr. Matthew Duke Phelps, was present for the entire procedure. I have personally reviewed these images and I agree with the report above.

At this time, pathology is pending. This report will be addended when the final pathology report of the biopsy specimen is received.

Impression:
Single Site Right Ultrasound Guided Axillary Lymph Node Biopsy complete.

PATHOLOGY, SURGICAL - Edited Result - FINAL (07/22/2026 1:10 PM PDT)

Component	Value	Ref Range	Test Method	Analysis Time	Performed At	Pathologist Signature
Addendum 1	ADDENDUM REASON: This addendum is issued to report ER, PR, HER2, and Ki67 testing. See Biomarker Summary template below.			07/28/2026 10:54 AM PDT	UNIVERSITY OF WASHINGTON MEDICAL CENTER PATHOLOGY	Addendum electronically signed by Dintzis, Suzanne Martha, MD on 7/28/2026 at 1054 PDT

Component	Value	Ref Range	Test Method	Analysis Time	Performed At	Pathologist Signature
	Biomarkers Disclaimer All controls show appropriate reactivity. ER/PR and HER2 immunohistochemical analyses are performed in accordance with the ASCO/CAP guidelines [1,2]. Department of Pathology protocols dictate that breast cancer containing tissue will be fixed in 10% neutral buffered formalin for a minimum of 6 hours to a maximum of 72 hours at room temperature for ER/ PR and HER2, unless otherwise noted in this report. All breast core biopsy specimens are rapidly immersed in formalin (Cold ischemia time is within required one hour). The detection system used is Roche Ultraview Universal DAB Detection Kit. The Criteria used to determine a positive vs. negative result, and scoring system (eg, percent of stained cells, staining pattern) are those recommended by ASCO/ CAP [1,2]. The interpretation is reported according to the CAP Reporting Template for Reporting Results of Biomarker Testing of Specimens from Patients with Carcinoma of the Breast. Cases with 2+ (equivocal) HER2 staining will be tested for gene amplification using validated fluorescent in-situ hybridization (FISH) technique.					

Component	Value	Ref Range	Test Method	Analysis Time	Performed At	Pathologist Signature
	These assays have not been validated on decalcified tissues. Results using decalcified tissues should be interpreted with caution, given the likelihood of false negativity in this testing environment. When the above stain result indicates 'Quantitative Evaluation', a manual morphometric scoring of the stain was performed. REFERENCES: 1. Allison KH, Hammond EH, Dowsett M, et al. Results - documented in this encounter

POST PROCEDURE DIAG MAMMOGRAPHY LEFT - Edited Result - FINAL (07/22/2026 2:58 PM PDT)

Anatomical Region	Laterality	Modality
Breast	Left	Mammography

Specimen (Source)	Anatomical Location / Laterality	Collection Method / Volume	Collection Time	Received Time

Addenda

Addendum on 07/28/2026 4:42 PM PDT
Pathology results reveal invasive lobular carcinoma which is malignant and concordant with the imaging findings.

Recommend referral to Multidisciplinary Clinic. Breast MRI is also recommended for further evaluation of extent of disease.

These pathology findings and recommendations were reported to the patient by Jessica Hui on 7/27/26 at 1556.

Narrative

07/22/2026 4:11 PM PDT
This result has an attachment that is not available.
Examination:
Ultrasound Guided Breast Biopsy Left
Post Procedure Diagnostic Mammography Left
The procedure was explained to the patient including benefits and alternatives. The risks, including but not limited to infection, bleeding, pain, and/or inadequate sampling were reviewed. The patient agreed to undergo the procedure and signed the consent form.

Ultrasound Guided Breast Biopsy Left:
The patient's left breast was imaged and images of the mass in the upper outer quadrant at 1 o'clock at a distance of 7 cm from the nipple were obtained. The breast was prepped for the procedure and the area was anesthetized with a local anesthetic. A Core Biopsy Needle was placed in the target using a lateral approach. Three specimens were obtained. A biopsy marker clip was placed at the site of the core biopsy.

The patient experienced no complications during the procedure. The estimated blood loss for the procedure was <5 cc.

Medication dose given
lidocaine (Xylocaine) 1 % injection 10 mL (4 mL Intradermal Given 7/22/26 1446)

A post procedure left digital mammogram confirms the biopsy marker clip is in the expected position

I, Dr. Matthew Duke Phelps, was present for the entire procedure. I have personally reviewed these images and I agree with the report above.

At this time, pathology is pending. This report will be addended when the final pathology report of the biopsy specimen is received.

Impression:
Single Site Left Ultrasound Guided Breast Biopsy complete.

PATHOLOGY, SURGICAL - Edited Result - FINAL (07/22/2026 1:05 PM PDT)

Component	Value	Ref Range	Test Method	Analysis Time	Performed At	Pathologist Signature
Addendum 1	ADDENDUM REASON: This addendum is issued to report ER, PR, HER2, and Ki67 testing. See Biomarker Summary template below. Biomarkers Disclaimer All controls show appropriate reactivity. ER/PR and HER2 immunohistochemical analyses are performed in			07/28/2026 10:54 AM PDT	UNIVERSITY OF WASHINGTON MEDICAL CENTER PATHOLOGY	Addendum electronically signed by Dintzis, Suzanne Martha, MD on 7/28/2026 at 1054 PDT

Component	Value	Ref Range	Test Method	Analysis Time	Performed At	Pathologist Signature
	accordance with the ASCO/CAP guidelines [1,2]. Department of Pathology protocols dictate that breast cancer containing tissue will be fixed in 10% neutral buffered formalin for a minimum of 6 hours to a maximum of 72 hours at room temperature for ER/ PR and HER2, unless otherwise noted in this report. All breast core biopsy specimens are rapidly immersed in formalin (Cold ischemia time is within required one hour). The detection system used is Roche Ultraview Universal DAB Detection Kit. The Criteria used to determine a positive vs. negative result, and scoring system (eg, percent of stained cells, staining pattern) are those recommended by ASCO/ CAP [1,2]. The interpretation is reported according to the CAP Reporting Template for Reporting Results of Biomarker Testing of Specimens from Patients with Carcinoma of the Breast. Cases with 2+ (equivocal) HER2 staining will be tested for gene amplification using validated fluorescent in-situ hybridization (FISH) technique. These assays have not been validated on decalcified tissues. Results using decalcified tissues should be interpreted with caution, given the likelihood of false negativity in this

Progress Notes - documented in this encounter

Julia Anne B Suico - 07/22/2026 10:00 AM PDT

Formatting of this note might be different from the original.

Mid-back pain below the shoulder blade since February
Now entire back, upper back is constant and tight, and sharp pain at the lower right side. This week that is feeling worse.
Pain is worse when placing pressure on the RLE, sitting, laying, bending, and any movements.
This affect her gait as she compensates with her LLE.
Relief with avoiding triggers and oxycodone 10mg

BLE atrophy
Generalized weakness
Frail when up and about

PET SCAN

Anubhav Gautam Amin - 07/22/2026 10:00 AM PDT

Formatting of this note might be different from the original.
University of Washington Medical Center Neurosurgery
Provider: Anubhav Amin, MD
Visit Date: 7/22/2026

Distant Site Telemedicine Encounter
I conducted this encounter via secure, live, face-to-face video conference with the patient. I reviewed the risks and benefits of telemedicine as pertinent to this visit and the patient agreed to proceed.

Provider Location: On-site location (clinic, hospital, on-site office)
Patient Location: At home
Present with patient: Family member

Use of Ambient Listening:
Was ambient listening technology used during this visit and was verbal consent for recording obtained? **Yes, used in visit. Consent was obtained.**
?

HPI:
History of Present Illness
Yvonne K Franklin is a 47 year old female with multifocal vertebral lesions and reported pathologic vertebral compression fractures who presents for evaluation of progressive cancer-related back pain.

Back Pain:
- Mid-back pain below the shoulder blade began in 02/2026 and has progressively worsened to involve the entire back
- Upper back pain characterized by constant tightness; previously the most symptomatic area but now less intense than last week
- Pain limits activity; without medication, upper back pain is 6-7/10, improving to 1-2/10 with medication
- This week developed new sharp, localized right lower back pain, more disabling than upper back tightness
- Right lower back pain triggered by weight-bearing on the right leg and certain twisting motions; worsened by sitting, lying, bending, and most movement
- When triggered, pain is 9-10/10, improving to about 5/10 with medication and by removing pressure/avoiding provoking movements
- Pain has altered gait, with compensation by relying more on the left leg

Neuromuscular Symptoms:
- Generalized weakness
- Caregiver-noted lower extremity atrophy
- No numbness or tingling down the legs

Imaging and Oncologic Workup:
- Thoracic spine MRIs in 06/2026 and 07/01/2026 show multiple vertebral lesions with pathologic fractures at T1, T5, T7, and T8
- Possible liver lesion per caregiver
- Completed PET scan on 07/21/2026
- Medical oncology evaluation has included consideration of myeloma versus breast primary; blood work reportedly "really good"
- Awaiting tissue diagnosis with breast biopsy scheduled for 07/22/2026 and bone biopsy scheduled for Friday

IMAGING:

Results
Radiology
Thoracic spine MRI (07/01/2026): Multiple vertebral body lesions; marked osseous erosion at T8 with compression fracture; additional thoracic lesions; no spinal cord compression. (Independently interpreted)
Chest and lumbar spine CT (07/2026): Multiple vertebral body lesions in thoracic and lumbar spine; marked osseous erosion at T8 with compression fracture; additional lesions in lumbar region; no major fracture or gross malalignment. (Independently interpreted)
Whole body PET (07/21/2026): Multiple hypermetabolic lesions in vertebral bodies corresponding to osseous erosion; no intracranial involvement; no spinal cord compression. (Independently interpreted)

IMPRESSION / ASSESSMENT:

		ICD-10-CM	
1.	**Secondary malignant neoplasm of bone (HCC)**	**C79.51**	**Referral to Interventional Radiology - Clinic**

Assessment & Plan
Spinal osseous metastatic disease with pathologic vertebral compression fractures
Multifocal osseous metastatic disease in thoracic and lumbar spine with pathologic vertebral body erosion and compression fractures, notably at T8, without spinal cord compression or major malalignment. Primary malignancy under evaluation pending biopsy results.
- **Urgent referral to Interventional Radiology for vertebroplasty/kyphoplasty for structural support at high-risk vertebral levels.**
- Referral to Radiation Oncology for palliative, pain-targeted radiation therapy.
- Present case at weekly spine tumor board for multidisciplinary management and assessment of pain generators and fracture risk.
- Coordinate timing with Radiation Oncology and Interventional Radiology; prioritize radiation if scheduled imminently, followed by cement augmentation if feasible.
- Proceed with breast biopsy today and bone biopsy Friday; compare pathology to determine primary and guide systemic therapy/ radiation sensitivity.
- Discuss biopsy consent options for mutation testing and sample preservation with Medical Oncology and biopsy team.

Cancer-related back pain
Severe, movement-exacerbated back pain due to multifocal spinal osseous metastatic disease and pathologic fractures, with persistent upper back pain and new sharp right lower back pain, without neurologic deficits.
- Radiation Oncology evaluation for palliative, pain-targeted radiation; consultation today, simulation/body setup scan Monday.
- Interventional Radiology evaluation for vertebroplasty/kyphoplasty to reduce pain and prevent further vertebral height loss; limit or stage levels treated to reduce procedural risk.
- Coordinate with Medical Oncology for systemic therapy planning post-biopsy results to control disease burden contributing to pain.
- Counseled on shifting pain possibly due to pain flare/inflammatory response or compression fracture settling; maintain close coordination during expedited diagnosis and treatment.

Prior EMR records reviewed as available and clinically relevant. All questions answered. Discharge and follow up instructions were discussed with the patient. The patient fully understands and is in agreement with the plan.

Number and Complexity of Problems Addressed
1 acute, uncomplicated illness or injury
1 undiagnosed new problem with uncertain prognosis
1 or more chronic illness with severe exacerbation, progression, or side effects of treatment
1 acute or chronic illness or injury that poses a threat to life or bodily function

Amount and/or Complexity of Data to be Reviewed and Analyzed
Independent interpretation of a test performed by another physician/other qualified health care professional (not separately reported)

Risk of Complications and/or Morbidity or Mortality of Patient Management
Moderate

Portions of this chart were made using voice recognition software.

Addendum on 07/23/2026 10:21 AM PDT
ADDENDUM:

Epic is an electronic system that healthcare organizations like UW Medicine and Fred Hutch Cancer Center use to manage patient care records. Epic experienced a technical issue that resulted in some notes by care team members not saving in some patients' charts.

Care team members are rapidly evaluating potentially affected charts to ensure that all chart notes are accurate. During this evaluation, the following small update was made to your chart. This addition was minor; you do not need to take any follow-up action and your care plan is not impacted. Please feel free to reach out to your care team if you have questions.

On review the following modifications or additional findings/impression text are needed:

IUD has been removed.

I have personally reviewed the images and agree with the report (or as edited).

Impressions

07/21/2026 1:37 PM PDT

* Mild to moderately FDG-avid lesion in the left lateral breast, concerning for a primary breast neoplasm.
* No left axillary lymphadenopathy or abnormal FDG uptake within the left axillary lymph nodes.
* Moderately FDG-avid right axillary lymph node, suspicious for metastatic involvement.
* Innumerable markedly intense FDG-avid osseous lesions throughout the axial and appendicular skeleton, with associated compression fractures involving several vertebral bodies, consistent with widespread metastatic disease.
* Given the markedly greater extent and intensity of skeletal FDG uptake relative to the left breast lesion, along with the absence of ipsilateral axillary nodal involvement, the pattern of metastatic disease is atypical for a breast primary, and an alternative primary malignancy should be considered.

* Mild to moderately avid left lateral breast lesion, possible neoplastic involvement. No left axillary lymphadenopathy or abnormal FDG uptake within the lymph nodes.

* Moderately avid right axillary lymph node, concerning for metastatic.
* Innumerable foci of intense FDG uptake involving axial and appendicular skeleton, with compression fractures of few vertebrae, likely metastatic. The intensity of the FDG uptake in the bone metastatic disease in comparison to the breast lesion and negative left lymph node involvement make it less likely to be originaria from the breast. Additional differential diagnosis include multiple myeloma, and lung adenocarcinoma.

I have personally reviewed the images and agree with the report (or as edited).

Narrative

07/21/2026 1:37 PM PDT
This result has an attachment that is not available.

Narrative

EXAMINATION:
PET MR F-18 FDG MID BODY

CLINICAL INDICATION:
cancer of unknown primary , metatatic to bone, assess for primary.
47-year-old woman with diffuse lytic osseous lesions involving thoracic spine and pelvis with multiple pathologic vertebral compression fractures and rib fracture, highly concerning for metastatic malignancy of unknown primary. No clear primary identified on CT chest/abdomen/pelvis. Diagnostic mammogram from 7/15/2026 depicts BI-RADS 4 suspicious lesion in bilateral breasts. CEA is elevated at 28.6 ng/mL.

Imaging requested for diagnosis.

Initial treatment strategy.

RADIOPHARMACEUTICAL:
FLUORODEOXYGLUCOSE F-18 FDG UWM UWM INJECTION,9.89 millicurie Intravenous,07/21/2026 0757
Injection site: Right antecubital fossa

TECHNIQUE:
Extent: Skull vertex to proximal thighs.
Uptake time: 60 minutes.
Fasting blood glucose level prior to FDG injection: 100 mg/dL.

After radiopharmaceutical injection, nondiagnostic, noncontrast, nonbreathhold MR images (3D T1 Dixon, axial T2) were obtained for attenuation correction and fusion with emission PET images for anatomical localization.

Images were interpreted on Visage PACS.

COMPARISON:
CT chest, abdomen and pelvis 07/13/2026, mammography dated 07/15/2026

FINDINGS:
Mediastinal blood pool mean SUV: 1.1
Mediastinal blood pool maximum SUV: 1.3
Liver mean SUV: 1.6.

Head and neck:
* Unremarkable.

Chest:
* Mild-to-moderate tracer uptake involving left lateral breast lesion measuring approximately 3.3 x 2.4 cm, with max SUV of 1.9 (9/277, 12/207).
* No focal uptake above the right breast background.
* Subcentimeter left axillary lymph nodes with faint FDG uptake. Non specific.
* Moderately avid right axillary lymph node measuring 9 x 8 mm, with max SUV of 2.0 (9/290, 12/188).

Abdomen and Pelvis:
* Linear FDG uptake in the rectum that limits the evaluation for focal lesions. However not clear focal

Osseous structures:
Innumerable foci of intense FDG uptake in the axial and appendicular skeleton involving left condylar process of mandible, bilateral ribs, bilateral clavicles, left humerus, sternum, sacrum, bilateral pelvic bones, and bilateral femurs and multiple vertebral levels, with compression fractures of T4, T8 and L5 vertebrae. A few representative lesions are as follows:
* Right lamina of T5 vertebra, with max SUV of 9.7 (9/302, 2/171).
* Medial end of right clavicle, with max SUV of 9.7 (9/306, 2/166).
* Right iliac bone with max SUV of 11.3 (9/158, 12/373)
* Left posterolateral ninth rib with max SUV of 7.3, with associated soft tissue component (9/260, 12/230).

Extremities:
* Unremarkable.

Additional noncontrast MRI findings:
* Indeterminate right maxillary sinus T1 and T2 hyperintense lesion, without tracer uptake, likely representing a polyp or mucous retention cyst with proteinaceous contents.
* Dental amalgam is seen, with resultant artifacts.
* IUD in place.
* Small nabothian cysts seen.
* Small volume pelvic ascites, likely physiologic.

Results - documented in this encounter

(ABNORMAL) MAM MAMMOGRAPHY DIAG W/TOMO BILAT (MAMMOGRAPHY DIAG W/TOMO BILATERAL) - Final result (07/15/2026 9:50 AM PDT)

Anatomical Region	Laterality	Modality
Breast	Bilateral	Mammography

Specimen (Source)	Anatomical Location / Laterality	Collection Method / Volume	Collection Time	Received Time

Narrative

07/15/2026 10:38 AM PDT
This result has an attachment that is not available.
Table formatting from the original result was not included.
Examination:
A targeted bilateral breast ultrasound was performed.
A digital diagnostic mammogram of both breasts was performed.
Tomosynthesis images were also obtained and reviewed as part of this examination. The results and recommendations of today's exam were discussed with the patient. The patient will also receive written notification of the results and recommendations from today's exam.

Reason for Exam:
47 year old with reason for exam of lytic bone lesions that are suspicious for mets with unknown primary.

Examinations Available for Comparison:
Comparison is made to images from: 04/10/2025 Mammography Diagnostic with Tomo Bilateral - Imaging Storage, 12/29/2021 Ultrasound Breast Limited Bilateral - Imaging Storage, 12/29/2021 Mammography Diagnostic with Tomo Bilateral - Imaging Storage, and 10/03/2020 Mammography Screening w/Tomo

Narrative

Bilateral - Imaging Storage

Density:
The breasts are extremely dense, which lowers the sensitivity of mammography.

Breast Cancer Risk Score
5-Year Risk Lifetime Risk to age 85 Notes

TC8 - Extremely Dense: 1.55%

TC8 - Extremely Dense: 13.59%

This is compared to risks for a woman of the same age:

5-year risk: TC8 - Extremely Dense: 1.13%
Lifetime risk: TC8 - Extremely Dense: 9.97%
Lifetime risk categories: Average risk <15%, Intermediate risk 15-25%, High risk >25%

For women with high (>25%) lifetime risk estimates, consider referral for further risk assessment and discussion of supplemental screening. Breast cancer risk consultation is available at Fred Hutchinson Cancer Center 206-606-2166 or at UWMC-Roosevelt 206-598-7749 or at UWMC-NW 206-668-6746.

Findings:
Left
Post-Surgical Finding
Mammography Diagnostic with Tomo Bilateral: There are post-surgical findings from a breast reduction in the left breast.

Mass
Ultrasound Breast Limited Bilateral: There is a 9 mm x 7 mm x 11 mm irregularly shaped, hypoechoic mass with indistinct margins in the left breast at 1 o'clock, 7 cm from the nipple. There is ill-defined heterogeneous tissue seen medial to this mass.

Mass
Mammography Diagnostic with Tomo Bilateral: There is a 7 mm equal density, oval mass with circumscribed margins in the upper outer quadrant of the left breast, posterior depth.
Ultrasound Breast Limited Bilateral: There is a 7 mm x 4 mm x 7 mm oval, parallel-oriented, hypoechoic mass with circumscribed margins in the left breast at 2 o'clock. The mass correlates with the mass seen on the mammogram.

Lymph Node
Mammography Diagnostic with Tomo Bilateral: There is a 9 mm partially imaged mass with circumscribed margins in the upper outer quadrant of the left breast, posterior depth.
Ultrasound Breast Limited Bilateral: There is a normal-appearing intramammary lymph node in the left breast at 2 o'clock, 6 cm from the nipple. The lymph node correlates with the mass seen on the mammogram.

Right
Post-Surgical Finding
Mammography Diagnostic with Tomo Bilateral: There are post-surgical findings from a breast reduction in the right breast.

Cyst
Mammography Diagnostic with Tomo Bilateral: There is a 10 mm low density, oval mass with circumscribed margins and layering calcifications in the lower inner quadrant of the right breast, middle depth.
Ultrasound Breast Limited Bilateral: There is a 13 mm x 8 mm x 15 mm simple cyst in the right breast at 5 o'clock, 6 cm from the nipple. The cyst correlates with the mass seen on the mammogram.

Lymph Node
Ultrasound Breast Limited Bilateral: There are at least three morphologically abnormal right axillary lymph node with cortical thickening, correlating with findings seen on 7/13/2026 CT chest.

Impression:
Left
1) Status post breast reduction. Left breast 9 mm x 7 mm x 11 mm mass at 1 o'clock with ill-defined heterogeneous tissue seen more medially. There is no definite mammographic correlate. Assessment: 4 - Suspicious finding. Ultrasound Guided Core Biopsy is recommended. The patient was given

Narrative

information about this procedure and the scheduling team was notified to call the patient to schedule.

2) Left breast 7 mm x 4 mm x 7 mm oval circumscribed mass at 2 o'clock. Assessment: 3 - Probably benign. Management is deferred pending biopsy results.

3) Left breast normal-appearing intramammary lymph node at 2 o'clock. Assessment: 2 - Benign finding.

Right
1) Status post breast reduction. Right breast 13 mm x 8 mm x 15 mm simple cyst at 5 o'clock. Assessment: 2 - Benign finding.

2) At least three morphologically abnormal right axillary lymph nodes. Assessment: 4 - Suspicious finding. Ultrasound Guided Core Biopsy is recommended. The patient was given information about this procedure and the scheduling team was notified to call the patient to schedule.

Overall:
Left Assessment BI-RADS: 4 - Suspicious
Right Assessment BI-RADS: 4 - Suspicious
Overall Assessment BI-RADS: 4 - Suspicious

The patient is noted to have dense breasts and received or will receive information regarding breast density in accordance with the Mammography Quality Standards Act. Dense breasts are normal and common, present in approximately half of women screened at the UW/Fred Hutch. Please see above for risk assessment information, if applicable.

Formatting of this note might be different from the original.

IDENTIFICATION
Yvonne K Franklin is a 47 year old female here today for oncology consultation for cancer of unknown primary with diffuse lytic bone lesions and pathologic vertebral fractures.

Use of Ambient Listening:
Was ambient listening technology used during this visit and was verbal consent for recording obtained? **No, not used. Not discussed this visit.**
?

ECOG
1 (Restricted in physically strenuous activity but ambulatory and able to carry out work of a light or sedentary nature, e.g., light house work, office work)

History of Present Illness:
47-year-old woman referred for urgent oncology evaluation after imaging demonstrated multifocal lytic osseous lesions and pathologic thoracic compression fractures concerning for metastatic malignancy of unknown primary origin.

Patient reports onset of thoracic back pain in February 2026. It initially started on her upper back by her right scapula but later would migrate to other parts of her back. She had a fall while skiing as well, but the fall event was not in congruent with her back pain. The pain was worsened with sneezing, twisting, lifting, deep inspiration, and turning in bed. Symptoms progressively worsened over several months despite PT exercises, stretching, massage, topical therapies, NSAIDs, gabapentin, muscle relaxants,

and trigger point treatment. She subsequently developed left rib pain and difficulty taking a full deep breath.

Thoracic spine MRI obtained 7/1/26 demonstrated diffuse abnormal marrow signal with multiple expansile vertebral lesions involving T1, T5, T8-T10, compression deformities at T1/T4/T5/T8 concerning for pathologic fractures, and possible liver lesion. CT chest/abdomen/pelvis on 7/13/26 showed diffuse lytic lesions throughout spine and pelvis, left 11th rib fracture, and scattered pulmonary nodules up to 4 mm without clear primary malignancy identified.

Currently reports persistent upper thoracic pain/stiffness rated 5-7/10. Taking ibuprofen and acetaminophen regularly for approximately 5 months. Unable to tolerate Percocet previously. Reports fatigue and poor sleep related to pain and anxiety surrounding diagnosis. Appetite generally intact though decreased interest in eating due to stress. Denies unexplained weight loss, fevers, night sweats, nausea, vomiting, palpable lymphadenopathy, or skin changes.

Of note, she reports also reports abnormal uterine bleeding with Mirena IUD in place. She had her Mirena replaced in 8/2025, and since then she has been experiencing cycles occurring every 3 weeks with prolonged bleeding and brown discharge; current bleeding ongoing for approximately 21 days. IUD was removed on 7/14/26, and she continues to have bleeding today. She uses about 3 pads per day and reports the bleeding is not heavy but more than spotting. Prior FSH elevated at 30.2. CT A/P noted small bilateral ovarian cysts.

Past Medical History:
Generalized anxiety disorder
Migraine headaches
Mild intermittent asthma
IBS with diarrhea
Eosinophilic esophagitis
GERD
PVCs/supraventricular bigeminy
Cervical degenerative disc disease
Menorrhagia
Vitamin D deficiency
Gilbert syndrome
Herpes simplex

Past Surgical History:
Breast reduction
Wisdom tooth extraction

Social History:
Lives in Kirkland, WA with husband and two children ages 9 and 11. Never smoker. No current alcohol use.

MEDICATIONS
Current Medications

Albuterol inhaler PRN
Propranolol 10 mg daily
Citalopram 20 mg daily
Alprazolam PRN at nighttime for sleep
Cyclobenzaprine PRN - not taking
Sumatriptan PRN
Omeprazole 20 mg daily
Valacyclovir PRN
Dicyclomine PRN
Mirena IUD - removed yesterday
Loestrin FE - not taking
OTC ibuprofen and acetaminophen

Allergies:
Fentanyl (PVCs)
Propofol (PVCs)

Family History:
Maternal grandmother with colon cancer

Physical Exam
BP (!) 158/83 | Pulse (!) 102 | Temp 36.8 °C (Oral) | Resp 16 | SpO2 98%

GENERAL: Breathing comfortably on room air.
Psychiatric: The patient has a normal affect.

LABORATORY
CBC and CMP are remarkable for CO2 31, BUN 21

CEA 29 or 23 depending on assay.
CA125 28 normal

DIAGNOSTIC STUDIES
CT CAP 7/13/26
Multiple osseous lytic lesions, as described, concerning for a neoplastic process.
Fracture of the left 11th rib.
A few scattered nodules, measuring up to 4 mm.
Diffuse lytic bone lesions throughout the spine and pelvis without CT evidence of primary malignancy in the abdomen or pelvis.
Small bilateral ovarian cysts would be better characterized on transvaginal ultrasound.

7/1/26: MRI T Spine
Diffusely heterogeneous T1 hypointense and multifocal T2 hyperintense marrow signal including 2.3 x 2.3 cm expansile aneurysmal bone cyst like lesion in T5 vetebral body and similar lesions in T1, T8, T9, T10 and vertebral bodies, as well as 1.2 x 1.1 cm expansile T1 isointense, T2 hyperintense lesion in the posterior elements of T10. Additionally there is a 1.8cm ovoid T2 hyperintense mass in the visualized posterior right liver lobe. While multiple aneurysmal bone cysts is a small possibility, the appearance is highly concerning for metastases from unknown primary.
Compression deformities of T1, T4, T5 and T8 vertebral bodies which may be pathologic.
Mild bilateral neural foraminal narrowing at T8-9 secondary to bony expansion.

Breast Mammo/UW, see report from today
Left
1) Status post breast reduction. Left breast 9 mm x 7 mm x 11 mm mass at 1 o'clock with ill-defined heterogeneous tissue seen more medially. There is no definite mammographic correlate. Assessment: 4 - Suspicious finding. Ultrasound Guided Core Biopsy is recommended. The patient was given information about this procedure and the scheduling team was notified to call the patient to schedule.
2) Left breast 7 mm x 4 mm x 7 mm oval circumscribed mass at 2 o'clock. Assessment: 3 - Probably benign. Management is deferred pending biopsy results.
3) Left breast normal-appearing intramammary lymph node at 2 o'clock. Assessment: 2 - Benign finding.

Right
1) Status post breast reduction. Right breast 13 mm x 8 mm x 15 mm simple cyst at 5 o'clock. Assessment: 2 - Benign finding.
2) At least three morphologically abnormal right axillary lymph nodes. Assessment: 4 - Suspicious finding. Ultrasound Guided Core Biopsy is recommended. The patient was given information about this procedure and the scheduling team was notified to call the patient to schedule.

Overall:
Left Assessment BI-RADS: 4 - Suspicious
Right Assessment BI-RADS: 4 - Suspicious
Overall Assessment BI-RADS: 4 - Suspicious

ASSESSMENT AND PLAN
47-year-old woman with diffuse lytic osseous lesions involving thoracic spine and pelvis with multiple pathologic vertebral compression fractures and rib fracture, highly concerning for metastatic malignancy of unknown primary. No clear primary identified on CT chest/abdomen/pelvis. Differential includes metastatic solid tumor, hematologic malignancy including multiple myeloma/lymphoma, or less likely primary bone process
.
Also with chronic abnormal uterine bleeding and bilateral ovarian cysts requiring gynecologic follow-up, though no definitive gynecologic primary identified on CT imaging.

Based on imaging findings and elevated CEA, breast cancer is a leading diagnosis.
Breast biopsy scheduled for next week
Bone biopsy ordered.
PET MR ordered to assess for primary/extent of bony disease

Follow-up with gynecology regarding abnormal uterine bleeding. No hormones until cancer diagnosis established. IUD has been removed.

Pain management - patient will use current opioid and report back.
I will prescribe based on use.

Miralax, senna and MOM for constipation

Anxiety support and symptom management ongoing through PCP and oncology team

Orders Placed This Encounter

•	PET MR F-18 FDG Mid Body
•	Biopsy Consult - IR/Radiology

I saw the patient with fellow Anh Lam.

Current Outpatient Medications:
• acetaminophen-codeine 300-30 MG tablet, Take 1 tablet by mouth every 6 hours as needed., Disp: , Rfl:
• propranolol 10 MG tablet, Take 1 tablet by mouth daily., Disp: , Rfl:

Electronically signed by Anh Lam at 07/15/2026 8:40 PM PDT

Results - documented in this encounter

(ABNORMAL) MAM MAMMOGRAPHY DIAG W/TOMO BILAT (MAMMOGRAPHY DIAG W/TOMO BILATERAL) - Final result (07/15/2026 9:50 AM PDT)

Anatomical Region	Laterality	Modality
Breast	Bilateral	Mammography

Specimen (Source)	Anatomical Location / Laterality	Collection Method / Volume	Collection Time	Received Time

Narrative

07/15/2026 10:38 AM PDT
This result has an attachment that is not available.
Table formatting from the original result was not included.
Examination:
A targeted bilateral breast ultrasound was performed.
A digital diagnostic mammogram of both breasts was performed.
Tomosynthesis images were also obtained and reviewed as part of this examination. The results and recommendations of today's exam were discussed with the patient. The patient will also receive written notification of the results and recommendations from today's exam.

Reason for Exam:
47 year old with reason for exam of lytic bone lesions that are suspicious for mets with unknown primary.

Examinations Available for Comparison:
Comparison is made to images from: 04/10/2025 Mammography Diagnostic with Tomo Bilateral - Imaging Storage, 12/29/2021 Ultrasound Breast Limited Bilateral - Imaging Storage, 12/29/2021 Mammography Diagnostic with Tomo Bilateral - Imaging Storage, and 10/03/2020 Mammography Screening w/Tomo

Narrative

Bilateral - Imaging Storage

Density:
The breasts are extremely dense, which lowers the sensitivity of mammography.

Breast Cancer Risk Score
5-Year Risk Lifetime Risk to age 85 Notes

TC8 - Extremely Dense: 1.55%

TC8 - Extremely Dense: 13.59%

This is compared to risks for a woman of the same age:

5-year risk: TC8 - Extremely Dense: 1.13%
Lifetime risk: TC8 - Extremely Dense: 9.97%
Lifetime risk categories: Average risk <15%, Intermediate risk 15-25%, High risk >25%

For women with high (>25%) lifetime risk estimates, consider referral for further risk assessment and discussion of supplemental screening. Breast cancer risk consultation is available at Fred Hutchinson Cancer Center 206-606-2166 or at UWMC-Roosevelt 206-598-7749 or at UWMC-NW 206-668-6746.

Findings:
Left
Post-Surgical Finding
Mammography Diagnostic with Tomo Bilateral: There are post-surgical findings from a breast reduction in the left breast.

Mass
Ultrasound Breast Limited Bilateral: There is a 9 mm x 7 mm x 11 mm irregularly shaped, hypoechoic mass with indistinct margins in the left breast at 1 o'clock, 7 cm from the nipple. There is ill-defined heterogeneous tissue seen medial to this mass.

Mass
Mammography Diagnostic with Tomo Bilateral: There is a 7 mm equal density, oval mass with circumscribed margins in the upper outer quadrant of the left breast, posterior depth.
Ultrasound Breast Limited Bilateral: There is a 7 mm x 4 mm x 7 mm oval, parallel-oriented, hypoechoic mass with circumscribed margins in the left breast at 2 o'clock. The mass correlates with the mass seen on the mammogram.

Lymph Node
Mammography Diagnostic with Tomo Bilateral: There is a 9 mm partially imaged mass with circumscribed margins in the upper outer quadrant of the left breast, posterior depth.
Ultrasound Breast Limited Bilateral: There is a normal-appearing intramammary lymph node in the left breast at 2 o'clock, 6 cm from the nipple. The lymph node correlates with the mass seen on the mammogram.

Right
Post-Surgical Finding
Mammography Diagnostic with Tomo Bilateral: There are post-surgical findings from a breast reduction in the right breast.

Cyst
Mammography Diagnostic with Tomo Bilateral: There is a 10 mm low density, oval mass with circumscribed margins and layering calcifications in the lower inner quadrant of the right breast, middle depth.
Ultrasound Breast Limited Bilateral: There is a 13 mm x 8 mm x 15 mm simple cyst in the right breast at 5 o'clock, 6 cm from the nipple. The cyst correlates with the mass seen on the mammogram.

Lymph Node
Ultrasound Breast Limited Bilateral: There are at least three morphologically abnormal right axillary lymph node with cortical thickening, correlating with findings seen on 7/13/2026 CT chest.

Impression:
Left
1) Status post breast reduction. Left breast 9 mm x 7 mm x 11 mm mass at 1 o'clock with ill-defined heterogeneous tissue seen more medially. There is no definite mammographic correlate. Assessment: 4 - Suspicious finding. Ultrasound Guided Core Biopsy is recommended. The patient was given

Narrative

information about this procedure and the scheduling team was notified to call the patient to schedule.

2) Left breast 7 mm x 4 mm x 7 mm oval circumscribed mass at 2 o'clock. Assessment: 3 - Probably benign. Management is deferred pending biopsy results.

3) Left breast normal-appearing intramammary lymph node at 2 o'clock. Assessment: 2 - Benign finding.

Right
1) Status post breast reduction. Right breast 13 mm x 8 mm x 15 mm simple cyst at 5 o'clock. Assessment: 2 - Benign finding.

2) At least three morphologically abnormal right axillary lymph nodes. Assessment: 4 - Suspicious finding. Ultrasound Guided Core Biopsy is recommended. The patient was given information about this procedure and the scheduling team was notified to call the patient to schedule.

Overall:
Left Assessment BI-RADS: 4 - Suspicious
Right Assessment BI-RADS: 4 - Suspicious
Overall Assessment BI-RADS: 4 - Suspicious

The patient is noted to have dense breasts and received or will receive information regarding breast density in accordance with the Mammography Quality Standards Act. Dense breasts are normal and common, present in approximately half of women screened at the UW/Fred Hutch. Please see above for risk assessment information, if applicable.

Miscellaneous Notes - documented in this encounter

Telephone Encounter - Shalece C - 07/13/2026 4:00 PM PDT

Formatting of this note might be different from the original.

Shalece Christensen, RN of FHCC Nurse Navigation contacted patient by phone to provide education and care coordination. Patient was referred by PCP for FHCC.

Narrative of diagnosis/ reason for care/ goals of care: Patient reports in mid-February she started to have back pain, felt like she couldn't take a deep breath. Saw PCP, x-rays fine. Pain persisted, sent to musculoskeletal specialist who thought maybe pt had muscle strain. X-rays fine, MRI abnormal. Four or five fractures on vertebra as well as lesions on vertebra, likely cancer that has been spreading. Radiologist thinks primary source is elsewhere, referred to FHCC for evaluation

Upcoming/pending appointments: IUD removal tomorrow 7/14

Assessment:
Swollen Lymph Nodes/palpable lump (location): No
Unexplained weight loss (note amount and timeframe): No
Fatigue (0-10): yes, sleeping poorly
Nausea/Vomiting: No
Fever or night sweats: No
Skin concerns (itching, rash, new lesions): No
Pain (location/rating): stiffness/pain in upper back 5-7/10- taking ibuprofen and tylenol for the last 5 months
Respiratory symptoms (cough, SOB): Can't take full breath
Other symptoms of concern reported by patient: has IUD with period every three weeks, spotting with brown discharge; has had current bleeding for 21 days straight

Oncologic History:
Oncology History Overview

7/1/26: MRI T Spine
IMPRESSION:
Diffusely heterogeneous T1 hypointense and multifocal T2 hyperintense marrow signal including 2.3 x 2.3 cm expansile aneurysmal bone cyst like lesion in T5 vetebral body and similar lesions in T1, T8, T9, T10 and vertebral bodies, as well as 1.2 x 1.1 cm expansile T1 isointense, T2 hyperintense lesion in the posterior elements of T10. Additionally there is a 1.8cm ovoid T2 hyperintense mass in the visualized posterior right liver lobe. While multiple aneurysmal bone cysts is a small possibility, the appearance is highly concerning for metastases from unknown primary. Recommend CT chest, abdomena nd pelvis with contrast or PET/CT for further evaluation.
Compression deformities of T1, T4, T5 and T8 vertebral bodies which may be pathologic.
Mild bilateral neural foraminal narrowing at T8-9 secondary to bony expansion.

7/13/26: CT Chest
IMPRESSION
* Multiple osseous lytic lesions, as described, concerning for a neoplastic process.
* Fracture of the left 11th rib.
* A few scattered nodules, measuring up to 4 mm. In the context of a potential primary malignancy, a follow-up CT of the chest in 3 months is advised.

7/13/26: CT A/P
IMPRESSION
Diffuse lytic bone lesions throughout the spine and pelvis without CT evidence of primary malignancy in the abdomen or pelvis.
Small bilateral ovarian cysts would be better characterized on transvaginal ultrasound.

Results - documented in this encounter

CT Abdomen And Pelvis with Contrast (CT ABDOMEN AND PELVIS W CONTRAST) - Final result (07/13/2026 10:36 AM PDT)

Anatomical Region	Laterality	Modality
Abdomen and Pelvis	N/A	Computed Tomography

Specimen (Source)	Anatomical Location / Laterality	Collection Method / Volume	Collection Time	Received Time
			07/13/2026 11:24 AM PDT	

Impressions

07/13/2026 3:59 PM PDT
Diffuse lytic bone lesions throughout the spine and pelvis without CT evidence of primary malignancy in the abdomen or pelvis. Small bilateral ovarian cysts would be better characterized on transvaginal ultrasound.

I have personally reviewed the images and agree with the report (or as edited).

Narrative

07/13/2026 3:59 PM PDT
This result has an attachment that is not available.
EXAMINATION:
CT ABDOMEN AND PELVIS W CONTRAST

CLINICAL INDICATION:
Lytic bone lesions on xray.
Pathological fracture, other site, initial encounter for fracture

TECHNIQUE:
CTB A2 CT Abdomen pelvis with intravenous contrast.
Computed tomography was obtained through the abdomen and pelvis with intravenous contrast only.
Multiplanar reformatted images were performed.

CONTRAST:
IOHEXOL 350 MG/ML IV SOLN,80 mL Intravenous,07/13/2026 1036

COMPARISON:
None.

FINDINGS:
Lower chest: Dictated separately.
Liver: Unremarkable with no suspicious focal lesion.
Gallbladder: Unremarkable.
Bile ducts: Unremarkable.
Spleen: Unremarkable.
Pancreas: No suspicious mass or duct dilation.
Adrenal glands: Unremarkable.
Kidneys and Ureters: Unremarkable.
Lymph Nodes: No enlarged lymph nodes.
Vasculature: Unremarkable.
Bowel: No obstruction or inflammatory bowel changes.
Reproductive organs: IUD in the uterus. Bilateral ovarian cysts, largest on the left measuring 2.1 x 1.6 cm.
Bladder: Unremarkable.
Peritoneum: Trace free fluid, likely physiologic.
Abdominal wall: Unremarkable
Bones: Multiple lytic lesions throughout the thoracolumbar spine and sacrum as well as the bilateral iliac bones.

Authorizing Provider	Result Type	Result Status
Sarah Jane Spencer	IMG CT PROCEDURES	Final Result

CT Chest with Contrast (CT CHEST W CONTRAST) - Final result (07/13/2026 10:36 AM PDT)

Anatomical Region	Laterality	Modality
Chest		Computed Tomography

Specimen (Source)	Anatomical Location / Laterality	Collection Method / Volume	Collection Time	Received Time
			07/13/2026 1:58 PM PDT	

Impressions

07/13/2026 2:20 PM PDT

* Multiple osseous lytic lesions, as described, concerning for a neoplastic process.
* Fracture of the left 11th rib.
* A few scattered nodules, measuring up to 4 mm. In the context of a potential primary malignancy, a follow-up CT of the chest in 3 months is advised.

Narrative

07/13/2026 2:20 PM PDT

This result has an attachment that is not available.

EXAMINATION:
CT CHEST W CONTRAST

CLINICAL INDICATION:
Lytic bone lesions on xray

TECHNIQUE:
CTB C1 CT Chest with intravenous contrast.
Computed tomography was obtained through the chest with intravenous contrast.

CONTRAST:
IOHEXOL 350 MG/ML IV SOLN,80 mL Intravenous,07/13/2026 1036

COMPARISON:
None.

FINDINGS:
Supraclavicular region: Unremarkable.

Mediastinum: Unremarkable.

Heart and great vessels: Unremarkable.

Lungs: A few scattered nodules are noted, measuring up to 4 mm (for example 5/163).

Pleura: Unremarkable.

Chest wall: Unremarkable.

Upper abdomen: Unremarkable.

Bones:
* Multiple lytic lesions are noted, most prominently visible throughout the spine, particularly T4, T5, and T8 vertebral bodies, and also noted within the sternum and the ribs. Some lesions are expansile, the largest of which is in the left ninth rib (5/164), demonstrating a soft tissue component that measures approximately 27 x 16 mm (3/217).
* Fracture of the left 11th rib (5/207).

Authorizing Provider	Result Type	Result Status
Sarah Jane Spencer	IMG CT PROCEDURES	Final Result

Notes:
++++++++++++++++++++++++++++++++++++++

When you download your health or visit summary documents, several files are compressed into a single ZIP file so they can
be transferred quickly. You need to uncompress (unzip) this file before you can view your documents. Refer to steps below
for uncompressing your download. A PDF file was included with your download and provides the easiest way to view the
contents of this document. Your download also includes files in the IHE_XDM folder with names starting with 'DOC'.
These files let other healthcare software applications understand the data in the documents. If you chose to encrypt your
download, it will only remain encrypted until you unzip it. To continue protecting your data when you are done viewing
it, locate the unzipped folder and delete it.

++++++++++++++++++++++++++++++++++++++

Folder Contents:
++++++++++++++++++++++++++++++++++++++

+ INDEX.HTM - Clinical Document viewer
+ README - Open for Instructions.TXT - This file
+ HTML - Resources for viewing INDEX.HTM and clinical documents

+ METADATA.XML - File containing information about all of the clinical documents in this folder
+ {part} of {whole} - My Health Summary.PDF - PDF containing the contents of your clinical documents

++++++++++++++++++++++++++++++++++++++

How to uncompress your library:
++

Windows Instructions
If your download was not encrypted:
These steps assume that you use the features that come with your operating system.
You can also use another program, such as 7-Zip, to manage compressed files.
1. When you downloaded the document library, you selected a location for the library. Open that location with Windows Explorer.
2. Right-click the compressed file to open the shortcut menu.
3. Choose Extract All to open the Extraction Wizard.
4. Click Next.
5. Select a destination directory for the files. For example, you can enter C:\Lucy to create a Lucy folder for the documents.
6. Click Next. The files in your document library are uncompressed and created in the location you entered.

7. Click Finish to close the Extraction Wizard.
If your download was encrypted:
You need to use a program such as 7-Zip to unzip the file.
You can download 7-Zip here: https://www.7-zip.org/download.html

MacOS Instructions
If your download was not encrypted:
These steps assume that you use the features that come with your operating system.
You can also use another program, such as Stuffit Expander, to manage compressed files.
1. When you downloaded the document library, you selected a location for the library. Open that location.
2. Right-click the compressed file on your Desktop to open the shortcut menu.
3. Select Open. The files in your document library are uncompressed and appear in a folder on your Desktop.
If your download was encrypted:
You need to use a program such as Keka to unzip the file.
You can download Keka here: https://www.keka.io/

Linux Instructions
These steps are based on Ubuntu. Other distributions might have different steps.
1. When you downloaded the document library, you selected a location for the library. Open that location with Archive Manager.
2. Right-click the compressed file to open the shortcut menu.
3. Click Extract Here. The files in your document library are uncompressed and appear in the current working directory.
To extract files from a command line, enter unzip <filename>.zip.
If your download was encrypted:
You need to use a program such as p7zip to unzip the file.
You can download p7zip here: https://p7zip.sourceforge.net/

"CRP C+Fibrinogen+Homocysteine"
text: Trend Results
"Acceptable Range Homocyst(e)ine"

Homocysteine is an amino acid produced in the body through metabolism. Normally, the body breaks down homocysteine with the help of vitamins B6, B12 and B9 (also known as folate). An elevated homocysteine level could suggest a vitamin deficiency and may be associated with increased cardiovascular risk or other health conditions.

Normal
≤ 14.5 umol/L
"6.0"
High
≥ 14.6 umol/L
"Acceptable Range C-Reactive Protein, Cardiac"
- strong:

"This test measures (at high sensitivity) the level of C-reactive protein: a substance made by the liver in response to inflammation, which may indicate the presence of an illness, injury, or infection. Persistently elevated CRP levels are associated with several diseases and conditions, including heart disease, diabetes, rheumatoid arthritis, and cancer."

"warning Low WBC"

Detects the number of white blood cells (leukocytes) in the body, cells that fight off infections and foreign agents that may infect the body. For example, high levels of WBCs may result from a number of conditions, including infection or inflammation, and low levels may result from others, including as a sign of a weakened immune system.

Low
≤ 2.9 10*3/uL
Moderately Low
3.0-3.3 10*3/uL
"3.2"
Normal
3.4-10.8 10*3/uL
Moderately High
10.9-11.5 10*3/uL
High

≥ 11.6 10*3/uL
"Acceptable Range RBC"
Measures the number of red blood cells (erythrocytes) in the blood. Red blood cells contain hemoglobin, a protein

that carries oxygen throughout the body. High levels of red blood cell counts with high hemoglobin and high hematocrit may indicate a disease of overproduction of blood cells.
Low
≤ 3.50 10*6/uL
Moderately Low
3.51-3.76 10*6/uL
Normal
3.77-5.28 10*6/uL
"3.84"

Moderately High
5.29-5.99 10*6/uL
High
≥ 6.00 10*6/uL
"Acceptable Range Hemoglobin"

Measures the amount of hemoglobin in the blood, the oxygen-carrying protein in red blood cells. Low amounts of hemoglobin combined with low red blood cell counts and low hematocrit may indicate anemia, which can have many causes (e.g., iron deficiency). High levels of hemoglobin with high red blood cell counts and high hematocrit may indicate a disease of overproduction of blood cells.

Low
≤ 11.0 g/dL
Normal
11.1-15.9 g/dL
"12.1"
High
≥ 16.0 g/dL
"Acceptable Range Hematocrit"

Measures the proportion of red blood cells to the fluid component (or plasma) in your blood. Low amounts of hematocrit combined with other results may indicate the presence of anemia, which can have many causes (e.g., iron deficiency). High levels of hematocrit with other results may indicate a disease of overproduction of blood cells.

Low
≤ 33.9 %
Normal
34.0-46.6 %
"37.0"
High
≥ 46.7 %
"Acceptable Range MCV"
Measures the average size of the red blood cells themselves. Lower or higher than normal MCV levels may be a sign of a health problem.
Low

≤ 74 fL
Moderately Low
75-78 fL
Normal
79-97 fL
"96"
Moderately High

98-102 fL
High
≥ 103 fL

"Acceptable Range MCH"
Measures MCH levels, the average amount of hemoglobin found in the red blood cells in the body.
Low
≤ 24.9 pg
Moderately Low
25.0-26.5 pg
Normal
26.6-33.0 pg
"31.5"
Moderately High

33.1-35.0 pg
High
≥ 35.1 pg
"Acceptable Range MCHC"
Measures MCHC levels, the average weight of hemoglobin based on the volume of red blood cells. A low MCHC value may be a sign of anemia or other conditions.
Low
≤ 29.9 g/dL
Moderately Low
30.0-31.4 g/dL
Normal

31.5-35.7 g/dL
"32.7"
Moderately High
35.8-37.0 g/dL
High
≥ 37.1 g/dL
"Acceptable Range RDW"

Measures the variation of size and volume of the body's red blood cells. Typically, red blood cells are relatively equal in shape and size - however, red blood cells can have a distorted shape or be smaller or larger than normal due to some health conditions and diseases. Low RDW values generally do not have clinical significance.

Low
≤ 11.6 %
Normal
11.7-15.4 %
"15.1"
Moderately High
15.5-16.5 %
High
≥ 16.6 %
"Acceptable Range Platelets"

Platelets are the cell components essential for blood clotting. Low levels can lead to bleeding risk and may be due to a variety of causes, such as liver disease, infections, medications, or bone marrow disorders. High levels can be

caused by inflammation or a bone marrow disorder, among other causes.

Low
≤ 100 10*3/uL
Moderately Low
101-149 10*3/uL
Normal
150-450 10*3/uL
"259"
Moderately High
451-499 10*3/uL
High

≥ 500 10*3/uL
"Neutrophils"

The percent of white blood cells that are neutrophils, the type of white blood cells that destroy bacteria and fungi and protect the body from infections. Increased levels of neutrophils may be the result of many conditions, including an immune response to infection, injury, inflammation, certain medications, or bone marrow disorder.

"55"
"Reference Interval: Not Estab., Unit: %"
"Lymphs"

The percent of white blood cells that are lymphocytes, the white blood cells that are vital to producing antibodies and helping the body fight against bacteria, viruses, and other threats. High lymphocyte levels may indicate an infection, inflammatory condition, or bone marrow disorder, among other causes. Many disorders can decrease the number of lymphocytes in the blood, but viral infections and undernutrition/malnutrition are the most common.

"29"
"Reference Interval: Not Estab., Unit: %"
"Monocytes"
The percent of white blood cells that are monocytes, the type of white blood cells responsible for breaking down germs or bacteria that enter the body. High levels of monocytes may indicate chronic infection, a blood disorder, inflammation, or other medical conditions
"7"
"Reference Interval: Not Estab., Unit: %"
"Eos"
The percent of white blood cells that are eosinophils in the body, a type of disease-fighting white blood cell. Usually, blood doesn't have a large number of eosinophils. The body may produce more of them in response to parasitic and fungal infections, allergic reactions, or other health problems.
"8"
"Reference Interval: Not Estab., Unit: %"

"Basos"

The percent of white blood cells that are basophils in your body, a type of white blood cell produced by bone marrow that helps the body fight parasitic infections, prevents blood clotting, and mediates allergic reactions. Low basophil levels may be due to an allergic reaction. In some cases, a high basophil level can result from certain blood cancers, autoimmune disease, or other conditions.

"1"
"Reference Interval: Not Estab., Unit: %"
"Acceptable Range Neutrophils (Absolute)"

Quantifies the number of neutrophils, the type of white blood cells that destroy bacteria and fungi and protect the body from infections. Increased levels of neutrophils may be the result of many conditions, including an immune response to infection, injury, inflammation, certain medications, or bone marrow disorder.

Low
≤ 1.1 10*3/uL

≤ 0.1 10*3/uL
"0.0"
Moderately High
0.2 10*3/uL
High
≥ 0.3 10*3/uL
"Comp. Metabolic Panel (14)"

text: Trend Results
"warning High Glucose"
The primary type of sugar found in your blood. Glucose measures your blood sugar at a specific point in time, when your blood was collected. High levels of glucose may be a sign of pre-diabetes, diabetes, or other conditions.
Low
≤ 59 mg/dL
Moderately Low

60-69 mg/dL
Normal
70-99 mg/dL
Moderately High
100-125 mg/dL
"106"
High
≥ 126 mg/dL
"Acceptable Range BUN"
Blood Urea Nitrogen (BUN) is a protein waste product removed from the blood by the kidneys. High levels may be a sign that your kidneys are not working properly. They may also be a sign of dehydration, or other conditions. Low levels may be a sign of poor nutrition, or other conditions.
Low
≤ 5 mg/dL
Normal
6-24 mg/dL
"13"
Moderately High
25-40 mg/dL
High
≥ 41 mg/dL
"warning Low Creatinine"
A muscle-produced waste product filtered out by the kidneys. High levels may be a sign that your kidneys are not working properly, which can be caused by a number of conditions. Low levels may indicate decreased muscle mass or other conditions.
Low
≤ 0.56 mg/dL
"0.56"
Normal
0.57-1.00 mg/dL
High
≥ 1.01 mg/dL
"Acceptable Range eGFR"
Estimated Glomerular Filtration Rate (eGFR) is a calculation (factored from your serum creatinine level, age, and gender) used to determine your level of kidney function; the higher your eGFR number, the better your kidneys are working; low results may be a sign of kidney disease.
Kidney Failure
≤ 14 mL/min/1.73m2
Severely Decreased
15-29 mL/min/1.73m2
Moderately Decreased
30-44 mL/min/1.73m2
Mildly Decreased
45-59 mL/min/1.73m2
Normal
≥ 60 mL/min/1.73m2

"113"
"Acceptable Range BUN/Creatinine Ratio"

A comparison of BUN levels to creatinine levels, two waste products filtered by the kidneys. An increased ratio may be due to acute kidney disorders, dehydration, increased protein intake, gastrointestinal bleeding, and other causes. A low ratio can be seen in liver disease, pregnancy, poor nutrition, and other conditions.

Low
≤ 8
Normal
9-23
"23"
Moderately High
24-27
High
≥ 28
"Acceptable Range Sodium"

An electrically charged mineral (electrolyte) necessary for healthy muscle and nerve function that also helps maintain fluid balance. An abnormal sodium result most likely reflects abnormalities of water balance in the body that may have a number of causes.
Low
≤ 131 mmol/L
Moderately Low
132-133 mmol/L
Normal
134-144 mmol/L
"139"
Moderately High
145-147 mmol/L

High
≥ 148 mmol/L
"Acceptable Range Potassium"

An electrically charged mineral (electrolyte) vital to a cell's ability to take in nutrients and remove waste; it is also essential for muscle function and regulating fluid balance. High levels may reflect kidney disease, adverse effects of certain medications, or excessive potassium intake, among other conditions. Low levels may be due to diuretic use, poor nutrition, or gastrointestinal disorders, among other causes.

Low
≤ 3.2 mmol/L
Moderately Low
3.3-3.4 mmol/L
Normal
3.5-5.2 mmol/L
"4.0"
Moderately High
5.3-5.4 mmol/L
High

≥ 5.5 mmol/L
"Acceptable Range Chloride"
An electrically charged mineral (electrolyte) that helps regulate fluid and acid-base balance within the body. An abnormal result most likely reflects abnormalities of water balance in the body or an acid-base imbalance, which can be caused by a variety of conditions.
Low
≤ 91 mmol/L
Moderately Low
92-95 mmol/L
Normal
96-106 mmol/L
"100"

Moderately High
107-110 mmol/L
High
≥ 111 mmol/L
"Acceptable Range Carbon Dioxide, Total"
A waste product created by the body's metabolism that helps maintain the body's acid-base balance (pH) in the form of the electrolyte bicarbonate. Abnormal values may reflect an acid-base imbalance, which can be caused by a variety of conditions.
Low
≤ 17 mmol/L
Moderately Low
18-19 mmol/L

Normal
20-29 mmol/L
"24"
Moderately High
30-33 mmol/L
High
≥ 34 mmol/L
"Acceptable Range Calcium"
A mineral essential to bone and muscle health. Abnormal values may be a sign of parathyroid disease, vitamin D abnormalities, certain medications, and other causes.
Low

≤ 8.4 mg/dL
Moderately Low
8.5-8.6 mg/dL
Normal
8.7-10.2 mg/dL
"9.3"
Moderately High
10.3-10.5 mg/dL
High
≥ 10.6 mg/dL

"Acceptable Range Protein, Total"
Total protein is the total amount of proteins (including albumin and globulin) found in the blood that helps determine

overall nutritional status.
Low
≤ 5.4 g/dL
Moderately Low
5.5-5.9 g/dL
Normal
6.0-8.5 g/dL
"6.7"
Moderately High

8.6-9.2 g/dL
High
≥ 9.3 g/dL
"Acceptable Range Albumin"

Albumin is the main protein that circulates in the blood, which provides tissue nourishment, carries substances (such as hormones and drugs) in the blood and helps keep fluids within the blood vessels. Low levels may be a sign of malnutrition, or a disease of the liver, thyroid, or kidneys, among other conditions. Higher than normal levels of albumin may indicate dehydration, among other conditions.

Low
≤ 3.4 g/dL
Moderately Low
3.5-3.8 g/dL
Normal
3.9-4.9 g/dL
"4.7"
Moderately High
5.0-5.2 g/dL
High

≥ 5.3 g/dL
"Acceptable Range Globulin, Total"
A measure of a group of proteins that function to help transport nutrients and help the body fight infections. High levels may be associated with chronic inflammation, while low levels can be a sign of a weakened immune system.
Low
≤ 1.1 g/dL
Moderately Low
1.2-1.4 g/dL
Normal
1.5-4.5 g/dL
"2.0"

Moderately High
4.6-5.3 g/dL
High
≥ 5.4 g/dL
"Acceptable Range Bilirubin, Total"

Total bilirubin is a combination of both processed and unprocessed bilirubin in your body. Bilirubin is a waste product produced by the liver as it breaks down red blood cells. High levels may be a sign of liver or gallbladder disease, or excessive breakdown of red blood cells, among other conditions.

Normal
≤ 1.2 mg/dL
"1.1"
Moderately High
1.3-2.0 mg/dL
High
≥ 2.1 mg/dL
"Acceptable Range Alkaline Phosphatase"
Alkaline Phosphatase (ALP) is an enzyme found in the cells of the liver and other tissue. High levels of alkaline phosphatase (ALP) have various potential causes and may be a sign of liver, gallbladder, or bone disease.
Low

≤ 32 IU/L
Moderately Low
33-40 IU/L
Normal
41-116 IU/L
"58"
Moderately High
117-139 IU/L
High
≥ 140 IU/L

"AST (SGOT)"
Aspartate Aminotransferase (AST) is an enzyme found in the cells throughout the body but mostly in the cells of the heart and liver. High aspartate aminotransferase (AST) levels could be a sign of liver damage, among other conditions.
"21"
"Reference Interval: 15-59, Unit: IU/L"
"ALT (SGPT)"
Alanine Aminotransferase (ALT) is an enzyme found mostly in the cells of the liver and kidney. High levels of alanine aminotransferase (ALT) could be a sign of liver damage or infection, among other conditions.

"Acceptable Range DHEA-Sulfate"

Dehydroepiandrosterone sulfate (DHEA-S) is a hormone produced by the adrenal glands that plays an important role in the production of the male sex hormone testosterone and the female sex hormone estrogen, as well as other bodily functions. This test measures the amount of DHEA-S in the blood. DHEA-S levels gradually decline after the age of 30. Symptoms of high DHEA-S levels in women may include irregular menstruation, excessive hair growth, hair loss and infertility. Symptoms of low DHEA-S levels in men may include unexpected weight loss, low libido and erectile dysfunction.

"Acceptable Range Uric Acid"
- strong:

This test measures the amount of uric acid in the blood, a natural waste product formed when the body breaks down purines, which come from your body's cells and certain foods. Your diet, genetics and certain medications can all affect your uric acid levels. High levels may be related to gout, kidney problems or other conditions.

"Progesterone"
text: Trend Results

"Progesterone"
- strong:

Progesterone is a hormone produced by the ovaries, and is essential for regulating menstruation and supporting pregnancy. During ovulation, when the ovary releases an egg, progesterone levels increase, causing the uterine lining (endometrium) to thicken in preparation for pregnancy. If the egg is not fertilized, progesterone levels drop, the endometrium sheds, and the menstrual period begins. Low levels of progesterone may cause symptoms like irregular periods and mood changes and may be associated with difficulty conceiving. Elevated progesterone levels may indicate recent ovulation. Progesterone levels decrease as you age and enter menopause.

"0.3"
"Unit: ng/mL"
"Insulin"
text: Trend Results
"Acceptable Range Insulin"

The insulin test measures the amount of insulin in your blood. Insulin is a hormone made by your pancreas that helps move sugar from your blood into your cells for energy. When insulin works well, it helps keep your blood sugar at a healthy level. Insulin levels can change based on what and when you ate, your physical activity, certain medications, your body's sensitivity to insulin, and medical conditions such as diabetes or hormonal conditions.

"348"
"60"
/uL
"360"
"warning Low WBC"

Detects the number of white blood cells (leukocytes) in the body, cells that fight off infections and foreign agents that may infect the body. For example, high levels of WBCs may result from a number of conditions, including infection or inflammation, and low levels may result from others, including as a sign of a weakened immune system.

Low
≤ 2.9 10*3/uL

"3.85"

Moderately High
5.29-5.99 10*6/uL
High
≥ 6.00 10*6/uL
"Acceptable Range Hemoglobin"

Measures the amount of hemoglobin in the blood, the oxygen-carrying protein in red blood cells. Low amounts of hemoglobin combined with low red blood cell counts and low hematocrit may indicate anemia, which can have many causes (e.g., iron deficiency). High levels of hemoglobin with high red blood cell counts and high hematocrit may indicate a disease of overproduction of blood cells.

Low
≤ 11.0 g/dL
Normal
11.1-15.9 g/dL
"12.3"
High
≥ 16.0 g/dL
"Acceptable Range Hematocrit"

Measures the proportion of red blood cells to the fluid component (or plasma) in your blood. Low amounts of hematocrit combined with other results may indicate the presence of anemia, which can have many causes (e.g., iron deficiency). High levels of hematocrit with other results may indicate a disease of overproduction of blood cells.

Low
≤ 33.9 %
Normal
34.0-46.6 %
"36.5"
High
≥ 46.7 %
"Acceptable Range MCV"
Measures the average size of the red blood cells themselves. Lower or higher than normal MCV levels may be a sign of a health problem.
Low

≤ 74 fL
Moderately Low
75-78 fL
Normal
79-97 fL
"95"
Moderately High
98-102 fL
High
≥ 103 fL

"Acceptable Range MCH"
Measures MCH levels, the average amount of hemoglobin found in the red blood cells in the body.
Low
≤ 24.9 pg
Moderately Low
25.0-26.5 pg
Normal
26.6-33.0 pg
"31.9"
Moderately High

33.1-35.0 pg
High
≥ 35.1 pg
"Acceptable Range MCHC"
Measures MCHC levels, the average weight of hemoglobin based on the volume of red blood cells. A low MCHC value may be a sign of anemia or other conditions.
Low
≤ 29.9 g/dL
Moderately Low
30.0-31.4 g/dL
Normal

31.5-35.7 g/dL
"33.7"
Moderately High
35.8-37.0 g/dL
High
≥ 37.1 g/dL
"Acceptable Range RDW"

Measures the variation of size and volume of the body's red blood cells. Typically, red blood cells are relatively equal in shape and size - however, red blood cells can have a distorted shape or be smaller or larger than normal due to some health conditions and diseases. Low RDW values generally do not have clinical significance.

Low
≤ 11.6 %
Normal
11.7-15.4 %
"14.9"
Moderately High

15.5-16.5 %
High
≥ 16.6 %
"Acceptable Range Platelets"

Platelets are the cell components essential for blood clotting. Low levels can lead to bleeding risk and may be due to a variety of causes, such as liver disease, infections, medications, or bone marrow disorders. High levels can be caused by inflammation or a bone marrow disorder, among other causes.

Low
≤ 100 10*3/uL
Moderately Low
101-149 10*3/uL
Normal
150-450 10*3/uL
"258"
Moderately High
451-499 10*3/uL
High

≥ 500 10*3/uL
"Neutrophils"

The percent of white blood cells that are neutrophils, the type of white blood cells that destroy bacteria and fungi and protect the body from infections. Increased levels of neutrophils may be the result of many conditions, including an immune response to infection, injury, inflammation, certain medications, or bone marrow disorder.

"51"
"Reference Interval: Not Estab., Unit: %"
"Lymphs"

The percent of white blood cells that are lymphocytes, the white blood cells that are vital to producing antibodies and helping the body fight against bacteria, viruses, and other threats. High lymphocyte levels may indicate an infection, inflammatory condition, or bone marrow disorder, among other causes. Many disorders can decrease the number of lymphocytes in the blood, but viral infections and undernutrition/malnutrition are the most common.

"32"
"Reference Interval: Not Estab., Unit: %"
"Monocytes"
The percent of white blood cells that are monocytes, the type of white blood cells responsible for breaking down germs or bacteria that enter the body. High levels of monocytes may indicate chronic infection, a blood disorder, inflammation, or other medical conditions
"7"
"Reference Interval: Not Estab., Unit: %"
"Eos"
The percent of white blood cells that are eosinophils in the body, a type of disease-fighting white blood cell. Usually, blood doesn't have a large number of eosinophils. The body may produce more of them in response to parasitic and fungal infections, allergic reactions, or other health problems.
"8"
"Reference Interval: Not Estab., Unit: %"

"Basos"

The percent of white blood cells that are basophils in your body, a type of white blood cell produced by bone marrow that helps the body fight parasitic infections, prevents blood clotting, and mediates allergic reactions. Low basophil levels may be due to an allergic reaction. In some cases, a high basophil level can result from certain blood cancers, autoimmune disease, or other conditions.

"2"
"Reference Interval: Not Estab., Unit: %"
"Acceptable Range Neutrophils (Absolute)"

Quantifies the number of neutrophils, the type of white blood cells that destroy bacteria and fungi and protect the body from infections. Increased levels of neutrophils may be the result of many conditions, including an immune response to infection, injury, inflammation, certain medications, or bone marrow disorder.

Low
≤ 1.1 10*3/uL

"CMP14+eGFR"
text: Trend Results
"warning High Glucose"

The primary type of sugar found in your blood. Glucose measures your blood sugar at a specific point in time, when your blood was collected. High levels of glucose may be a sign of pre-diabetes, diabetes, or other conditions.
Low
≤ 59 mg/dL
Moderately Low
60-69 mg/dL
Normal
70-99 mg/dL
Moderately High
100-125 mg/dL
High

≥ 126 mg/dL
"127"
"Acceptable Range BUN"
Blood Urea Nitrogen (BUN) is a protein waste product removed from the blood by the kidneys. High levels may be a sign that your kidneys are not working properly. They may also be a sign of dehydration, or other conditions. Low levels may be a sign of poor nutrition, or other conditions.
Low
≤ 5 mg/dL
Normal
6-24 mg/dL
"15"
Moderately High

25-40 mg/dL
High
≥ 41 mg/dL
"Acceptable Range Creatinine"
A muscle-produced waste product filtered out by the kidneys. High levels may be a sign that your kidneys are not working properly, which can be caused by a number of conditions. Low levels may indicate decreased muscle mass or other conditions.
Low
≤ 0.56 mg/dL
Normal
0.57-1.00 mg/dL
"0.63"

High
≥ 1.01 mg/dL
"Acceptable Range eGFR"
Estimated Glomerular Filtration Rate (eGFR) is a calculation (factored from your serum creatinine level, age, and gender) used to determine your level of kidney function; the higher your eGFR number, the better your kidneys are working; low results may be a sign of kidney disease.
Kidney Failure
≤ 14 mL/min/1.73m2
Severely Decreased
15-29 mL/min/1.73m2
Moderately Decreased
30-44 mL/min/1.73m2

Mildly Decreased
45-59 mL/min/1.73m2
Normal
≥ 60 mL/min/1.73m2
"110"
"warning High BUN/Creatinine Ratio"

A comparison of BUN levels to creatinine levels, two waste products filtered by the kidneys. An increased ratio may be due to acute kidney disorders, dehydration, increased protein intake, gastrointestinal bleeding, and other causes. A low ratio can be seen in liver disease, pregnancy, poor nutrition, and other conditions.

Low
≤ 8
Normal
9-23
Moderately High
24-27
"24"
High
≥ 28
"Acceptable Range Sodium"

An electrically charged mineral (electrolyte) necessary for healthy muscle and nerve function that also helps maintain fluid balance. An abnormal sodium result most likely reflects abnormalities of water balance in the body that may have a number of causes.
Low
≤ 131 mmol/L
Moderately Low
132-133 mmol/L
Normal
134-144 mmol/L
"137"
Moderately High
145-147 mmol/L

High
≥ 148 mmol/L
"Acceptable Range Potassium"

An electrically charged mineral (electrolyte) vital to a cell's ability to take in nutrients and remove waste; it is also essential for muscle function and regulating fluid balance. High levels may reflect kidney disease, adverse effects of certain medications, or excessive potassium intake, among other conditions. Low levels may be due to diuretic use, poor nutrition, or gastrointestinal disorders, among other causes.

Low
≤ 3.2 mmol/L
Moderately Low
3.3-3.4 mmol/L
Normal
3.5-5.2 mmol/L
"4.0"
Moderately High
5.3-5.4 mmol/L
High

≥ 5.5 mmol/L
"Acceptable Range Chloride"
An electrically charged mineral (electrolyte) that helps regulate fluid and acid-base balance within the body. An abnormal result most likely reflects abnormalities of water balance in the body or an acid-base imbalance, which can be caused by a variety of conditions.
Low
≤ 91 mmol/L
Moderately Low
92-95 mmol/L
Normal
96-106 mmol/L
"99"

Moderately High
107-110 mmol/L
High
≥ 111 mmol/L
"Acceptable Range Carbon Dioxide, Total"
A waste product created by the body's metabolism that helps maintain the body's acid-base balance (pH) in the form of the electrolyte bicarbonate. Abnormal values may reflect an acid-base imbalance, which can be caused by a variety of conditions.
Low
≤ 17 mmol/L
Moderately Low
18-19 mmol/L

Normal
20-29 mmol/L
"25"
Moderately High
30-33 mmol/L
High
≥ 34 mmol/L
"Acceptable Range Calcium"
A mineral essential to bone and muscle health. Abnormal values may be a sign of parathyroid disease, vitamin D

abnormalities, certain medications, and other causes.
Low

≤ 8.4 mg/dL
Moderately Low
8.5-8.6 mg/dL
Normal
8.7-10.2 mg/dL
"8.9"
Moderately High
10.3-10.5 mg/dL
High
≥ 10.6 mg/dL

"Acceptable Range Protein, Total"
Total protein is the total amount of proteins (including albumin and globulin) found in the blood that helps determine overall nutritional status.
Low
≤ 5.4 g/dL
Moderately Low
5.5-5.9 g/dL
Normal
6.0-8.5 g/dL
"7.1"
Moderately High

8.6-9.2 g/dL
High
≥ 9.3 g/dL
"Acceptable Range Albumin"

Albumin is the main protein that circulates in the blood, which provides tissue nourishment, carries substances (such as hormones and drugs) in the blood and helps keep fluids within the blood vessels. Low levels may be a sign of malnutrition, or a disease of the liver, thyroid, or kidneys, among other conditions. Higher than normal levels of albumin may indicate dehydration, among other conditions.

Low
≤ 3.4 g/dL
Moderately Low
3.5-3.8 g/dL
Normal
3.9-4.9 g/dL
"4.7"
Moderately High
5.0-5.2 g/dL
High

≥ 5.3 g/dL
"Acceptable Range Globulin, Total"
A measure of a group of proteins that function to help transport nutrients and help the body fight infections. High levels may be associated with chronic inflammation, while low levels can be a sign of a weakened immune system.
Low
≤ 1.1 g/dL

Moderately Low
1.2-1.4 g/dL
Normal
1.5-4.5 g/dL
"2.4"

Moderately High
4.6-5.3 g/dL
High
≥ 5.4 g/dL
"Acceptable Range Bilirubin, Total"

Total bilirubin is a combination of both processed and unprocessed bilirubin in your body. Bilirubin is a waste product produced by the liver as it breaks down red blood cells. High levels may be a sign of liver or gallbladder disease, or excessive breakdown of red blood cells, among other conditions.

Normal
≤ 1.2 mg/dL
"0.7"
Moderately High
1.3-2.0 mg/dL
High
≥ 2.1 mg/dL
"warning High Alkaline Phosphatase"
Alkaline Phosphatase (ALP) is an enzyme found in the cells of the liver and other tissue. High levels of alkaline phosphatase (ALP) have various potential causes and may be a sign of liver, gallbladder, or bone disease.
Low

≤ 32 IU/L
Moderately Low
33-40 IU/L
Normal
41-116 IU/L
Moderately High
117-139 IU/L
"131"
High
≥ 140 IU/L

"AST (SGOT)"
Aspartate Aminotransferase (AST) is an enzyme found in the cells throughout the body but mostly in the cells of the heart and liver. High aspartate aminotransferase (AST) levels could be a sign of liver damage, among other conditions.
"24"
"Reference Interval: 15-59, Unit: IU/L"
"ALT (SGPT)"
Alanine Aminotransferase (ALT) is an enzyme found mostly in the cells of the liver and kidney. High levels of alanine aminotransferase (ALT) could be a sign of liver damage or infection, among other conditions.
"19"
"Reference Interval: 0-35, Unit: IU/L"
"Iron and TIBC"

text: Trend Results

"Acceptable Range Iron Bind.Cap.(TIBC)"
Measures the blood's capacity to bind iron with transferrin, a protein that combines with ferritin to deliver iron to new red blood cells. Low levels may be a sign of iron deficiency, while high levels may indicate iron overload. Either may be caused by various conditions.
Low
≤ 199 ug/dL
Moderately Low
200-249 ug/dL
Normal
250-450 ug/dL
"264"
Moderately High

451-500 ug/dL
High
≥ 501 ug/dL
"Acceptable Range UIBC"

Measures the reserve capacity of transferrin, which is the portion that has not yet been saturated by iron. Transferrin is a protein that transports iron around in the body. Low levels may be a sign of iron deficiency, while high levels may indicate iron overload. Either may be caused by various conditions.

Low
≤ 119 ug/dL

Severely Decreased
15-29 mL/min/1.73m2
Moderately Decreased
30-44 mL/min/1.73m2

Mildly Decreased
45-59 mL/min/1.73m2
Normal
≥ 60 mL/min/1.73m2
"90"
"Acceptable Range BUN/Creatinine Ratio"

A comparison of BUN levels to creatinine levels, two waste products filtered by the kidneys. An increased ratio may be due to acute kidney disorders, dehydration, increased protein intake, gastrointestinal bleeding, and other causes. A low ratio can be seen in liver disease, pregnancy, poor nutrition, and other conditions.

Low
≤ 8
Normal
9-23
"14"
Moderately High
24-27
High
≥ 28
"Acceptable Range Sodium"

An electrically charged mineral (electrolyte) necessary for healthy muscle and nerve function that also helps maintain fluid balance. An abnormal sodium result most likely reflects abnormalities of water balance in the body that may have a number of causes.
Low
≤ 131 mmol/L
Moderately Low
132-133 mmol/L
Normal
134-144 mmol/L
"139"
Moderately High
145-147 mmol/L

High
≥ 148 mmol/L
"Acceptable Range Potassium"

An electrically charged mineral (electrolyte) vital to a cell's ability to take in nutrients and remove waste; it is also essential for muscle function and regulating fluid balance. High levels may reflect kidney disease, adverse effects of certain medications, or excessive potassium intake, among other conditions. Low levels may be due to diuretic use, poor nutrition, or gastrointestinal disorders, among other causes.

Low
≤ 3.2 mmol/L
Moderately Low
3.3-3.4 mmol/L
Normal
3.5-5.2 mmol/L
"4.1"
Moderately High
5.3-5.4 mmol/L
High

≥ 5.5 mmol/L
"Acceptable Range Chloride"
An electrically charged mineral (electrolyte) that helps regulate fluid and acid-base balance within the body. An abnormal result most likely reflects abnormalities of water balance in the body or an acid-base imbalance, which can be caused by a variety of conditions.
Low
≤ 91 mmol/L
Moderately Low
92-95 mmol/L
Normal
96-106 mmol/L
"103"

Moderately High
107-110 mmol/L
High
≥ 111 mmol/L
"Acceptable Range Carbon Dioxide, Total"
A waste product created by the body's metabolism that helps maintain the body's acid-base balance (pH) in the form of the electrolyte bicarbonate. Abnormal values may reflect an acid-base imbalance, which can be caused by a variety of conditions.
Low
≤ 17 mmol/L
Moderately Low
18-19 mmol/L

Normal
20-29 mmol/L
"23"
Moderately High
30-33 mmol/L
High
≥ 34 mmol/L
"warning Low Calcium"
A mineral essential to bone and muscle health. Abnormal values may be a sign of parathyroid disease, vitamin D

abnormalities, certain medications, and other causes.
Low

≤ 8.4 mg/dL
Moderately Low
8.5-8.6 mg/dL
"8.6"
Normal
8.7-10.2 mg/dL
Moderately High
10.3-10.5 mg/dL
High
≥ 10.6 mg/dL

"Acceptable Range Protein, Total"
Total protein is the total amount of proteins (including albumin and globulin) found in the blood that helps determine overall nutritional status.
Low
≤ 5.4 g/dL
Moderately Low
5.5-5.9 g/dL
Normal
6.0-8.5 g/dL
"6.7"
Moderately High

8.6-9.2 g/dL
High
≥ 9.3 g/dL
"Acceptable Range Albumin"

Albumin is the main protein that circulates in the blood, which provides tissue nourishment, carries substances (such as hormones and drugs) in the blood and helps keep fluids within the blood vessels. Low levels may be a sign of malnutrition, or a disease of the liver, thyroid, or kidneys, among other conditions. Higher than normal levels of albumin may indicate dehydration, among other conditions.

Low
≤ 3.4 g/dL
Moderately Low
3.5-3.8 g/dL
Normal
3.9-4.9 g/dL
"4.3"
Moderately High
5.0-5.2 g/dL
High

≥ 5.3 g/dL
"Acceptable Range Globulin, Total"
A measure of a group of proteins that function to help transport nutrients and help the body fight infections. High levels may be associated with chronic inflammation, while low levels can be a sign of a weakened immune system.
Low
≤ 1.1 g/dL

Moderately Low
1.2-1.4 g/dL
Normal
1.5-4.5 g/dL
"2.4"

Moderately High
4.6-5.3 g/dL
High
≥ 5.4 g/dL
"Acceptable Range Bilirubin, Total"

Total bilirubin is a combination of both processed and unprocessed bilirubin in your body. Bilirubin is a waste product produced by the liver as it breaks down red blood cells. High levels may be a sign of liver or gallbladder disease, or excessive breakdown of red blood cells, among other conditions.

Normal
≤ 1.2 mg/dL
"0.6"
Moderately High
1.3-2.0 mg/dL
High
≥ 2.1 mg/dL
"warning High Alkaline Phosphatase"
Alkaline Phosphatase (ALP) is an enzyme found in the cells of the liver and other tissue. High levels of alkaline phosphatase (ALP) have various potential causes and may be a sign of liver, gallbladder, or bone disease.
Low

≤ 32 IU/L
Moderately Low
33-40 IU/L
Normal
41-116 IU/L
Moderately High
117-139 IU/L
"137"
High
≥ 140 IU/L

"AST (SGOT)"
Aspartate Aminotransferase (AST) is an enzyme found in the cells throughout the body but mostly in the cells of the heart and liver. High aspartate aminotransferase (AST) levels could be a sign of liver damage, among other conditions.
"19"
"Reference Interval: 15-59, Unit: IU/L"
"ALT (SGPT)"
Alanine Aminotransferase (ALT) is an enzyme found mostly in the cells of the liver and kidney. High levels of alanine aminotransferase (ALT) could be a sign of liver damage or infection, among other conditions.
"14"
"Reference Interval: 0-35, Unit: IU/L"
"Iron and TIBC"

text: Trend Results

"Acceptable Range Iron Bind.Cap.(TIBC)"
Measures the blood's capacity to bind iron with transferrin, a protein that combines with ferritin to deliver iron to new red blood cells. Low levels may be a sign of iron deficiency, while high levels may indicate iron overload. Either may be caused by various conditions.
Low
≤ 199 ug/dL
Moderately Low
200-249 ug/dL
Normal
250-450 ug/dL
"256"
Moderately High

451-500 ug/dL
High
≥ 501 ug/dL
"Acceptable Range UIBC"

Measures the reserve capacity of transferrin, which is the portion that has not yet been saturated by iron. Transferrin is a protein that transports iron around in the body. Low levels may be a sign of iron deficiency, while high levels may indicate iron overload. Either may be caused by various conditions.

Low
≤ 119 ug/dL
Moderately Low
120-130 ug/dL
Normal
131-425 ug/dL
"219"
Moderately High
426-450 ug/dL
High

≥ 451 ug/dL
"Acceptable Range Iron"

Measures the level of iron, an essential mineral that is an important component of hemoglobin that serves to carry oxygen throughout the body, so that the body can produce energy. Low iron levels may be a sign of iron deficiency, while high levels may indicate iron overload. Either may be caused by various conditions.

Low
≤ 18 ug/dL
Moderately Low
19-26 ug/dL
Normal
27-159 ug/dL
"37"
Moderately High
160-170 ug/dL
High

≥ 171 ug/dL
"warning Low Iron Saturation"

Measures the percentage of iron bound to transferrin, a protein that transports iron around the body, which is calculated by dividing the serum level of iron by total iron binding capacity (TIBC). Low saturation levels may be a sign of iron deficiency, while high levels may indicate iron overload. Either may be caused by various conditions.

Low
≤ 11 %
Moderately Low
12-14 %
"14"
Normal
15-55 %
Moderately High
56-60 %
High

≥ 61 %
"Vitamin D, 25-Hydroxy"
text: Trend Results
"Acceptable Range Vitamin D, 25-Hydroxy"
- strong:
Vitamin D is a hormone that is produced in your skin in response to sunlight; it is essential to bone and mineral health. 25-hydroxyvitamin D (25-D) is the best measure of how much vitamin D is stored in your body. A prolonged deficiency in Vitamin D can pose health risks.
Deficient
≤ 19.9 ng/mL
Insufficient
20-29.9 ng/mL

Normal
30.0-100.0 ng/mL
"70.3"
High
≥ 100.1 ng/mL
"C-Reactive Protein, Cardiac"
text: Trend Results
"warning High C-Reactive Protein, Cardiac"
- strong:

"This test measures (at high sensitivity) the level of C-reactive protein: a substance made by the liver in response to inflammation, which may indicate the presence of an illness, injury, or infection. Persistently elevated CRP levels are associated with several diseases and conditions, including heart disease, diabetes, rheumatoid arthritis, and cancer."

Low Risk
≤ 0.99 mg/L
Average Risk
1.00-3.00 mg/L
High Risk
≥ 3.01 mg/L
"6.81"

"Erythrocyte Sedimentation Rate"
text: Trend Results
"Erythrocyte Sedimentation Rate"

"25"
"0"
mm/hr
"32"
"Copper, Serum or Plasma"
text: Trend Results
"Copper, Serum or Plasma"
- strong:
"114"
"76"

ug/dL
"142"
"Zinc, Plasma or Serum"
text: Trend Results
"Acceptable Range Zinc, Plasma or Serum"
- strong:

Zinc is an important mineral that helps support your immune system and metabolism. It's found in foods such as red meat, chicken, oysters, beans, lentils, nuts and chickpeas. When you're deficient in zinc, you may experience symptoms like weight loss, loss of appetite, decreased immunity and hair loss.

Low
≤ 43 ug/dL
Normal
44-115 ug/dL
"58"
High
≥ 116 ug/dL
"Ferritin"
text: Trend Results
"warning High Ferritin"

Measures the amount of ferritin in the blood, a red-blood-cell protein that stores iron in your cells. High levels may indicate excessive iron storage or inflammation, among other conditions. Low levels may be a sign of iron deficiency, which can be caused by various conditions.
Low
≤ 11 ng/mL
Moderately Low
12-14 ng/mL
Normal
15-150 ng/mL
Moderately High
151-180 ng/mL
"179"

High
≥ 181 ng/mL

Medications

Medication / Sig / Dispense Quantity / Refills / Last Filled / Start Date / End Date / Status

Medication Spacer/Aero-Holding Chambers (PRO COMFORT SPACER ADULT) miscellaneous
Sig Use 1 each as needed.
Dispense Quantity 1 each
Start Date 06/22/2022
Status Active

Medication Omeprazole 20 MG delayed release capsule
Sig Take 1 capsule by mouth daily 30 minutes prior to a meal.
Dispense Quantity 90 capsule
Refills 3

Start Date 05/26/2023
Status Active

Medication SUMAtriptan (Imitrex) 100 MG tablet
Sig TAKE 1 TABLET BY MOUTH AT ONSET OF HEADACHE, MAY TAKE 1 AND REPEAT IN 2 HOURS IF HEADACHE REMAINS, MAX 2 TABLETS PER 24 HOURS
Dispense Quantity 9 tablet
Refills 5
Start Date 07/17/2024
Status Active

Medication dicyclomine 10 MG capsule
Sig Take 1 capsule by mouth 4 times daily as needed (colonic spasms).
Dispense Quantity 30 capsule
Refills 3
Start Date 07/18/2025
Status Active

Medication valACYclovir 1 g tablet tab
Sig 2 tablets Q12 hrs x 1 day as needed herpes outbreak
Dispense Quantity 8 tablet
Refills 3
Start Date 07/18/2025
Status Active

Medication cyclobenzaprine (Flexeril) 10 MG tab
Sig Take 0.5-1 tablets by mouth 3 times daily as needed for muscle spasms.
Dispense Quantity 30 tablet
Start Date 04/24/2026
Status Active

Medication albuterol HFA (Proventil, Ventolin, ProAir) 90 MCG/ACT inhaler
Sig Take 2 puffs by inhalation every 4 to 6 hours as needed for wheezing or shortness of breath. Not to exceed 10 puffs/24 hours.
Dispense Quantity 18 g
Refills 2
Start Date 07/10/2026
Status Active

Medication propranolol (Inderal) 10 MG tab
Sig Take 1 tablet by mouth daily.
Dispense Quantity 100 tablet
Refills 3
Start Date 07/10/2026
Status Active

Medication Lidocaine 10 % cream
Sig Apply 1 g topically 1 to 2 times daily as needed for pain.
Dispense Quantity 30 g
Refills 4
Start Date 07/13/2026
Status Active

Medication meloxicam 15 MG tablet tab
Start Date 05/12/2026
Status Active

Medication naloxone 4 MG/0.1ML liquid
Sig Use 1 spray in one nostril for suspected opioid overdose. Call 911. If unresponsive in 2 to 3 minutes, repeat with new

naloxone nasal spray in opposite nostril.
Start Date 07/27/2026
End Date 07/27/2027
Status Active

Medication Polyethylene glycol 3350 (Miralax) 17 g packet
Sig Take 17 g by mouth.
Status Active

Medication prochlorperazine (Compazine) 10 MG tablet
Sig Take 1 tablet by mouth every 6 hours as needed for nausea or vomiting.
Start Date 07/24/2026
Status Active

Medication tretinoin (Retin-A) 0.025 % cream
Sig Spread 1 Application on affected area.
Status Active

Medication MISCELLANEOUS
Sig Morphine sulfate ER- from Fred hutch- do not take together with other sedatives
Status Active

• XR RIBS UNILATERAL RIGHT 2V (XR RIBS RIGHT) - Final result (02/26/2026 8:42 AM PST)

Anatomical Region Laterality Modality

Ribs Computed Radiography

Specimen (Source) Anatomical Location / Laterality Collection Method / Volume Collection Time Received Time

02/26/2026 8:07 AM PST

Narrative

02/26/2026 9:15 AM PST

CLINICAL INDICATION: right upper back pain after trauma

PROCEDURE: XR RIBS RIGHT

COMPARISONS: Rib x-ray the same date.

DATE: 2/26/2026 8:07 AM

FINDINGS:
Visualized ribs are intact. No displaced fracture.

IMPRESSION:
Negative rib series.

Exam interpreted by Radia.

Procedure Note

JOHN EPHRON - 02/26/2026
Formatting of this note might be different from the original.
CLINICAL INDICATION: right upper back pain after trauma

PROCEDURE: XR RIBS RIGHT

COMPARISONS: Rib x-ray the same date.

DATE: 2/26/2026 8:07 AM

FINDINGS:
Visualized ribs are intact. No displaced fracture.

IMPRESSION:
Negative rib series.

Exam interpreted by Radia.

Authorizing Provider Result Type Result Status

Leilani Paras MD IMAGING - GENERAL Final Result

• XR CHEST 2V - Final result (02/26/2026 8:42 AM PST)

Anatomical Region Laterality Modality

Chest Computed Radiography

Specimen (Source) Anatomical Location / Laterality Collection Method / Volume Collection Time Received Time

02/26/2026 8:06 AM PST

Narrative

02/26/2026 9:14 AM PST

CLINICAL INDICATION: upper back pain with inspiration

PROCEDURE: XR CHEST 2V

COMPARISONS: Rib x-ray the same date.

DATE: 2/26/2026 8:06 AM

FINDINGS:
Heart size is normal. Mediastinum is unremarkable.
Lungs appear clear.
No pleural effusion is present.
Healed left lateral ninth rib fracture is present.

IMPRESSION:
Healed left lateral no fracture.
Otherwise normal chest.
No pneumothorax.

Exam interpreted by Radia.

• COMPREHENSIVE METABOLIC PANEL - Final result (07/18/2025 9:19 AM PDT)

Component Value Ref Range Test Method Analysis Time Performed At Pathologist Signature

Glucose 93 65 - 99 mg/dL OCWA FORMERLY THE EVERETT CLINIC

BUN 16 8 - 23 mg/dL OCWA FORMERLY THE EVERETT CLINIC

Creatinine 0.62 0.44 - 1.03 mg/dL OCWA FORMERLY THE EVERETT CLINIC

Sodium 140 135 - 148 mEq/L OCWA FORMERLY THE EVERETT CLINIC

Potassium 4.3 3.5 - 5.3 mEq/L OCWA FORMERLY THE EVERETT CLINIC

Chloride 104 98 - 111 mEq/L OCWA FORMERLY THE EVERETT CLINIC

CO2 32 22 - 33 mEq/L OCWA FORMERLY THE EVERETT CLINIC

Total Protein 6.8 6.0 - 8.0 g/dL OCWA FORMERLY THE EVERETT CLINIC

Albumin 4.6 3.4 - 4.8 g/dL OCWA FORMERLY THE EVERETT CLINIC

Calcium 9.3 8.5 - 10.3 mg/dL OCWA FORMERLY THE EVERETT CLINIC

AST (SGOT) 14 5 - 33 U/L OCWA FORMERLY THE EVERETT CLINIC

Alkaline Phosphatase 41 30 - 120 U/L OCWA FORMERLY THE EVERETT CLINIC

Bilirubin Total 1.3 0.2 - 1.3 mg/dL OCWA FORMERLY THE EVERETT CLINIC

ALT (SGPT) 17 6 - 44 U/L OCWA FORMERLY THE EVERETT CLINIC

eGFR 111 >=60 mL/min /1.73m Squared OCWA FORMERLY THE EVERETT CLINIC

Comment:
eGFR is calculated using the 2021 CKD-EPI equation, as recommended by the National Kidney Foundation-American Society of Nephrology Task Force.
Compared to previously used equations for eGFR, the 2021 CKD-EPI equation may overestimate eGFR in non-black patients and underestimate eGFR in black patients. Consider further workup and/or Nephrology referral for eGFR consistently less than 45 mL/min/1.73m2 on two or more measurements.

• 25 OH VITAMIN D - Final result (07/17/2024 12:51 PM PDT)

Component Value Ref Range Test Method Analysis Time Performed At Pathologist Signature

25 OH Vitamin D 23.6 30.0 - 100.0 ng/mL OCWA FORMERLY THE EVERETT CLINIC

Comment:
INTERPRETIVE guidelines for Vitamin D (25-hydroxy)

Deficiency < 10 ng/mL
Insufficiency 10- 29 ng/mL
Sufficient/Optimal 30-100 ng/mL
Toxicity > 100 ng/mL

NOTE: A pediatric Reference range has not been established by Diasorin using this kit. Ranges observed in selected populations vary considerably and a significant proportion of asymptomatic persons, particularly elderly and those with limited sun exposure will have Vitamin D insufficiency associated with elevated intact parathyroid hormone levels and elevated risk of osteoporosis. Serum levels above 30 ng/mL have been recommended for optimizing bone health whereas levels below 10 ng/mL are associated with a significant risk of osteomalacia.

eGFR 111 >=60 mL/min /1.73m Squared OCWA FORMERLY THE EVERETT CLINIC

Comment:

eGFR is calculated using the 2021 CKD-EPI equation, as
recommended by the National Kidney Foundation-American
Society of Nephrology Task Force.
Compared to previously used equations for eGFR, the 2021

CKD-EPI equation may overestimate eGFR in non-black patients and underestimate eGFR in black patients. Consider further workup and/or Nephrology referral for eGFR consistently less than 45 mL/min/1.73m2 on two or more measurements.

• COVID-19 (POINT OF CARE) NAAT - Final result (01/10/2024 11:23 AM PST)

Component Value Ref Range Test Method Analysis Time Performed At Pathologist Signature

COVID-19 (Point of Care) NAAT Not Detected Not Detected THE EVERETT CLINIC

Comment:
Negative results do not preclude SARS-CoV-2 infection and should not be used as the sole basis for patient management decisions. Negative results must be combined with clinical observations, patient history and epidemiological information.

The Abbott ID NOW point-of-care assay is a real-time isothermal nucleic acid amplification test intended for the qualitative detection of nucleic acid from the SARS-CoV-2 in respiratory swabs from suspected infected patients. This test has not been FDA cleared or approved. This test has been authorized by the FDA under an Emergency Use Authorization (EUA) and can only be used in that capacity.

Is the patient symptomatic? Yes THE EVERETT CLINIC

If symptomatic, date of onset 20240108 THE EVERETT CLINIC

Is the PT employed in Healthcare? Unknown THE EVERETT CLINIC

Is the PT pregnant? Unknown THE EVERETT CLINIC

GFR >60 >=60 mL/min /1.73m Squared THE EVERETT CLINIC

Comment:
-The calculated GFR result is based on the MDRD equation which is not directly comparable to the creatinine clearance estimation from other equations (such as the Cockcroft-Gault).
-For African Americans, multiply the calculated GFR by 1.21
-For age > 70, consider 24 hour urine creatinine clearance to improve accuracy for GFR estimation.

Staging of Chronic Kidney Disease (CKD)

CKD I GFR>=60 with kidney damage, normal serum creatinine
CKD II GFR>60 with kidney damage, abnormal serum creatinine or creatinine clearance
CKD III GFR 30-59, consider nephrology consult
CKD IV GFR 15-29
CKD V GFR <15

Definition of kidney damage
1. 2 abnormal MAU/Cr >30 mg/g results over a 90 day period.
2. 2 abnormal protein/creatinine > 180mg/gram over a 90 day period.
3. 2 abnormal urine analysis: persistent proteinuria, RBC, WBC, casts in urine, excluding chronic UTI.
4. Abnormal kidney ultrasound or renal artery duplex (cysts, hydronephrosis, echogencity, nephrocalcinosis, atrophic or large kidneys, and renal artery stenosis)

• LIPID PANEL - Final result (05/26/2021 9:43 AM PDT)

Component Value Ref Range Test Method Analysis Time Performed At Pathologist Signature

Triglycerides 71 30 - 200 mg/dL THE EVERETT CLINIC

Comment:
Adult:
< 150 Desirable
150-199 Borderline High
200-499 High
>= 500 Very High

Pediatric 2-17 years
< 90 Desirable
90-129 Borderline High
>= 130 High

Cholesterol 222 150 - 220 mg/dL THE EVERETT CLINIC

Comment:
< 200 Desirable
200-239 Borderline High
>= 240 High Risk

HDL Cholesterol 89 mg/dL THE EVERETT CLINIC

Comment:
Male:
>=60 Less than Average Risk of Coronary Disease
40-59 Average Risk of Coronary Disease
<40 Increased Risk of Coronary Disease

Female:
>=60 Less than Average Risk of Coronary Disease
50-59 Average Risk of Coronary Disease
<50 Increased Risk of Coronary Disease

LDL Cholesterol 119 3 - 130 mg/dL THE EVERETT CLINIC

Comment:
< 100 Optimal
100-129 Near Optimal, Above Optimal
130-159 Borderline High
160-189 High
>= 190 Very High

Chol/HDL 2.5 0.0 - 5.0 THE EVERETT CLINIC

LDL/HDL 1.3 0.0 - 3.0 THE EVERETT CLINIC

• COMPREHENSIVE METABOLIC PANEL - Final result (05/26/2021 9:43 AM PDT)

Component Value Ref Range Test Method Analysis Time Performed At Pathologist Signature

Glucose 88 65 - 99 mg/dL THE EVERETT CLINIC

BUN 15 8 - 23 mg/dL THE EVERETT CLINIC

Creatinine 0.66 0.44 - 1.03 mg/dL THE EVERETT CLINIC

Sodium 135 135 - 148 mEq/L THE EVERETT CLINIC

Potassium 3.7 3.5 - 5.3 mEq/L THE EVERETT CLINIC

Chloride 102 98 - 111 mEq/L THE EVERETT CLINIC

CO2 26 22 - 33 mEq/L THE EVERETT CLINIC

Total Protein 7.6 6.0 - 8.0 g/dL THE EVERETT CLINIC

Albumin 4.8 3.4 - 4.8 g/dL THE EVERETT CLINIC

A/G Ratio 1.71 1.00 - 2.00 THE EVERETT CLINIC

Calcium 9.2 8.5 - 10.3 mg/dL THE EVERETT CLINIC

AST (SGOT) 16 5 - 33 U/L THE EVERETT CLINIC

Alkaline Phosphatase 33 30 - 120 U/L THE EVERETT CLINIC

Bilirubin Total 1.5 0.2 - 1.3 mg/dL THE EVERETT CLINIC

ALT (SGPT) 17 6 - 44 U/L THE EVERETT CLINIC

GFR >60 >=60 mL/min /1.73m Squared THE EVERETT CLINIC

Comment:
-The calculated GFR result is based on the MDRD equation which is not directly comparable to the creatinine clearance estimation from other equations (such as the Cockcroft-Gault).
-For African Americans, multiply the calculated GFR by 1.21
-For age > 70, consider 24 hour urine creatinine clearance to improve accuracy for GFR estimation.

Staging of Chronic Kidney Disease (CKD)

CKD I GFR>=60 with kidney damage, normal serum creatinine
CKD II GFR>60 with kidney damage, abnormal serum creatinine or creatinine clearance
CKD III GFR 30-59, consider nephrology consult
CKD IV GFR 15-29
CKD V GFR <15

Definition of kidney damage
1. 2 abnormal MAU/Cr >30 mg/g results over a 90 day period.
2. 2 abnormal protein/creatinine > 180mg/gram over a 90 day period.
3. 2 abnormal urine analysis: persistent proteinuria, RBC, WBC, casts in urine, excluding chronic UTI.
4. Abnormal kidney ultrasound or renal artery duplex (cysts, hydronephrosis, echogencity, nephrocalcinosis, atrophic or large kidneys, and renal artery stenosis)

Specimen (Source) Anatomical Location / Laterality Collection Method / Volume Collection Time Received Time

Cervical 05/26/2021 05/27/2021

Impressions

CELLNETIX - 06/03/2021 10:16 PM PDT

CASE: P21-057671
PATIENT: Yvonne Franklin

PAP INTERPRETATION:
NEGATIVE FOR INTRAEPITHELIAL LESION OR MALIGNANCY.

SPECIMEN ADEQUACY:
Satisfactory for evaluation. Endocervical/transformation zone component present.

NOTES:
ThinPrep specimen imaged successfully by automated locator device; field of view examination only. [ThinPrep Imager Duo. Hologic, Inc, Marlborough, MA]

MOLECULAR RESULTS
NEGATIVE for High Risk HPV.

This test is FDA-approved for the Roche Cobas 4800 platform using ThinPrep(TM) vials. HPV High Risk on SurePath(TM) vials and its performance characteristics were determined by the Molecular Pathology Laboratory, CellNetix Pathology Laboratories, 12501 E Marginal Way S, Ste 200, Tukwila WA 98168, using the Roche Cobas 4800 assay. This assay is a qualitative test that utilizes amplification of target DNA by Polymerase Chain Reaction (PCR) and nucleic acid hybridization for the detection of 14 HPV high risk types (16,18,31,33,35,39,45,51,52,56,58,59,66 and 68). This test is used for clinical purposes. This laboratory is regulated under the 1988 CLIA amendments as qualified to perform high-complexity clinical testing.

SPECIMEN DESCRIPTION: ThinPrep Imaged Liquid Pap Test
SPECIMEN SOURCE: Cervical
CLINICAL INFORMATION: Other: MIRENA IUD
DATE OF LAST MENSTRUAL PERIOD: Not given

This document contains information that was shared with Yvonne Franklin. It may not contain the entire record from Optum Care Washington.

Allergies

- Fentanyl (Adverse Drug Reaction) - High Criticality
- Propofol (Adverse Drug Reaction) - High Criticality

Medications

- Spacer/Aero-Holding Chambers (PRO COMFORT SPACER ADULT) miscellaneous (Started 6/22/2022)
  Use 1 each as needed.
- Omeprazole 20 MG delayed release capsule (Started 5/26/2023)
  Take 1 capsule by mouth daily 30 minutes prior to a meal.

3 refills remaining

- SUMAtriptan (Imitrex) 100 MG tablet (Started 7/17/2024)
  TAKE 1 TABLET BY MOUTH AT ONSET OF HEADACHE, MAY TAKE 1 AND REPEAT IN 2 HOURS IF HEADACHE REMAINS, MAX 2 TABLETS PER 24 HOURS

5 refills remaining

- dicyclomine 10 MG capsule (Started 7/18/2025)
  Take 1 capsule by mouth 4 times daily as needed (colonic spasms).

3 refills remaining

- valACYclovir 1 g tablet tab (Started 7/18/2025)
  2 tablets Q12 hrs x 1 day as needed herpes outbreak

3 refills remaining

- cyclobenzaprine (Flexeril) 10 MG tab (Started 4/24/2026)
  Take 0.5-1 tablets by mouth 3 times daily as needed for muscle spasms.
- albuterol HFA (Proventil, Ventolin, ProAir) 90 MCG/ACT inhaler (Started 7/10/2026)
  Take 2 puffs by inhalation every 4 to 6 hours as needed for wheezing or shortness of breath. Not to exceed 10 puffs/24 hours.

2 refills remaining

- propranolol (Inderal) 10 MG tab (Started 7/10/2026)
  Take 1 tablet by mouth daily.

3 refills remaining

- Lidocaine 10 % cream (Started 7/13/2026)
  Apply 1 g topically 1 to 2 times daily as needed for pain.

4 refills remaining

- meloxicam 15 MG tablet tab (Started 5/12/2026)
- naloxone 4 MG/0.1ML liquid (Started 7/27/2026)
  Use 1 spray in one nostril for suspected opioid overdose. Call 911. If unresponsive in 2 to 3 minutes, repeat with new naloxone nasal spray in opposite nostril.
- Polyethylene glycol 3350 (Miralax) 17 g packet
  Take 17 g by mouth.
- prochlorperazine (Compazine) 10 MG tablet (Started 7/24/2026)
  Take 1 tablet by mouth every 6 hours as needed for nausea or vomiting.
- tretinoin (Retin-A) 0.025 % cream
  Spread 1 Application on affected area.
- MISCELLANEOUS
  Morphine sulfate ER- from Fred hutch- do not take together with other sedatives

Component Value Ref Range Test Method Analysis Time Performed At Pathologist Signature

COVID-19 (Point of Care) NAAT Not Detected Not Detected THE EVERETT CLINIC

Comment:
Negative results do not preclude SARS-CoV-2 infection and should not be used as the sole basis for patient management decisions. Negative results must be combined with clinical observations, patient history and epidemiological information.

The Abbott ID NOW point-of-care assay is a real-time isothermal nucleic acid amplification test intended for the qualitative detection of nucleic acid from the SARS-CoV-2 in respiratory swabs from suspected infected patients. This test has not been FDA cleared or approved. This test has been authorized by the FDA under an Emergency Use Authorization (EUA) and can only be used in that capacity.

Is the patient symptomatic? Yes THE EVERETT CLINIC

If symptomatic, date of onset 20240108 THE EVERETT CLINIC

• COMPREHENSIVE METABOLIC PANEL - Final result (02/15/2023 9:58 AM PST)

Component Value Ref Range Test Method Analysis Time Performed At Pathologist Signature

Glucose 91 65 - 99 mg/dL THE EVERETT CLINIC

BUN 20 8 - 23 mg/dL THE EVERETT CLINIC

Creatinine 0.64 0.44 - 1.03 mg/dL THE EVERETT CLINIC

Sodium 134 135 - 148 mEq/L THE EVERETT CLINIC

Potassium 3.6 3.5 - 5.3 mEq/L THE EVERETT CLINIC

Chloride 100 98 - 111 mEq/L THE EVERETT CLINIC

CO2 28 22 - 33 mEq/L THE EVERETT CLINIC

Total Protein 7.4 6.0 - 8.0 g/dL THE EVERETT CLINIC

Albumin 4.4 3.4 - 4.8 g/dL THE EVERETT CLINIC

A/G Ratio 1.47 1.00 - 2.00 THE EVERETT CLINIC

Calcium 9.0 8.5 - 10.3 mg/dL THE EVERETT CLINIC

AST (SGOT) 18 5 - 33 U/L THE EVERETT CLINIC

Alkaline Phosphatase 35 30 - 120 U/L THE EVERETT CLINIC

Bilirubin Total 1.6 0.2 - 1.3 mg/dL THE EVERETT CLINIC

ALT (SGPT) 16 6 - 44 U/L THE EVERETT CLINIC

GFR >60 >=60 mL/min /1.73m Squared THE EVERETT CLINIC

Comment:
The calculated GFR result is based on the MDRD equation which is

not directly comparable to the creatinine clearance
estimation from other equations (such as the Cockcroft-Gault).

For African Americans, multiply the calculated GFR by 1.21.

ALT (SGPT) 15 6 - 44 U/L THE EVERETT CLINIC

GFR >60 >=60 mL/min /1.73m Squared THE EVERETT CLINIC

Comment:
-The calculated GFR result is based on the MDRD equation which is not directly comparable to the creatinine clearance estimation from other equations (such as the Cockcroft-Gault).
-For African Americans, multiply the calculated GFR by 1.21
-For age > 70, consider 24 hour urine creatinine clearance to improve accuracy for GFR estimation.

Staging of Chronic Kidney Disease (CKD)

CKD I GFR>=60 with kidney damage, normal serum creatinine
CKD II GFR>60 with kidney damage, abnormal serum creatinine or creatinine clearance
CKD III GFR 30-59, consider nephrology consult
CKD IV GFR 15-29
CKD V GFR <15

Definition of kidney damage
1. 2 abnormal MAU/Cr >30 mg/g results over a 90 day period.
2. 2 abnormal protein/creatinine > 180mg/gram over a 90 day period.
3. 2 abnormal urine analysis: persistent proteinuria, RBC, WBC, casts in urine, excluding chronic UTI.
4. Abnormal kidney ultrasound or renal artery duplex (cysts, hydronephrosis, echogencity, nephrocalcinosis, atrophic or large kidneys, and renal artery stenosis)

• 25 OH VITAMIN D - Final result (05/26/2021 9:43 AM PDT)

Component Value Ref Range Test Method Analysis Time Performed At Pathologist Signature

25 OH Vitamin D 16.6 30.0 - 100.0 ng/mL THE EVERETT CLINIC

Comment:
INTERPRETIVE guidelines for Vitamin D (25-hydroxy)

Deficiency < 10 ng/mL
Insufficiency 10- 29 ng/mL
Sufficient/Optimal 30-100 ng/mL
Toxicity > 100 ng/mL

NOTE: A pediatric Reference range has not been established by Diasorin using this kit. Ranges observed in selected populations vary considerably and a significant proportion of asymptomatic persons, particularly elderly and those with limited sun exposure will have Vitamin D insufficiency associated with elevated intact parathyroid hormone levels and elevated risk of osteoporosis. Serum levels above 30 ng/mL have been recommended for optimizing bone health whereas levels below 10 ng/mL are associated with a significant risk of osteomalacia.

Cervical 05/26/2021 05/27/2021

Impressions

CELLNETIX - 06/03/2021 10:16 PM PDT

CASE: P21-057671
PATIENT: Yvonne Franklin

PAP INTERPRETATION:
NEGATIVE FOR INTRAEPITHELIAL LESION OR MALIGNANCY.

SPECIMEN ADEQUACY:
Satisfactory for evaluation. Endocervical/transformation zone component present.

NOTES:
ThinPrep specimen imaged successfully by automated locator device; field of view examination only. [ThinPrep Imager Duo. Hologic, Inc, Marlborough, MA]

MOLECULAR RESULTS
NEGATIVE for High Risk HPV.

This test is FDA-approved for the Roche Cobas 4800 platform using ThinPrep(TM) vials. HPV High Risk on SurePath(TM) vials and its performance characteristics were determined by the Molecular Pathology Laboratory, CellNetix Pathology Laboratories, 12501 E Marginal Way S, Ste 200, Tukwila WA 98168, using the Roche Cobas 4800 assay. This assay is a qualitative test that utilizes amplification of target DNA by Polymerase Chain Reaction (PCR) and nucleic acid hybridization for the detection of 14 HPV high risk types (16,18,31,33,35,39,45,51,52,56,58,59,66 and 68). This test is used for clinical purposes. This laboratory is regulated under the 1988 CLIA amendments as qualified to perform high-complexity clinical testing.

Patient Instructions

• Patient Instructions

Denise Kraft, MD - 01/10/2024 11:01 AM PST
Formatting of this note is different from the original.
Dear Ms.Franklin

Thank you for including me in your health care today.

Here are the diagnoses that we discussed today and what we are doing about it:
ICD-10-CM
1. Upper respiratory tract infection, unspecified type J06.9

No new prescriptions were ordered during this visit.

Additional orders placed in this encounter
Procedures
COVID-19 (POINT OF CARE) NAAT
GROUP A STREP, NAAT

(J06.9) Upper respiratory tract infection, unspecified type (primary encounter diagnosis)
Comment: stable
Plan: GROUP A STREP, NAAT, COVID-19 (POINT OF CARE)
NAAT
See Handout

(J02.0) Strep pharyngitis
Comment: monitor symptoms
Plan: Amoxicillin 500 MG capsule
Do salt water gargles

Return in 4 weeks for follow-up or sooner as needed.

PATIENT INSTRUCTIONS
- FOR -

UPPER RESPIRATORY INFECTION

An upper respiratory tract infection (cold or influenza) is usually caused by a virus. Antibiotics such as penicillin do not kill viruses which cause the common cold and influenza. Any respiratory infection is more or less "catching", so don't share spoons, cups, or kisses with others until you are well. In general, follow these three basic rules: (1) Keep warm and rest as much as possible. If you feel like resting, you should. (2) Take plenty of fluids. Food is not as important since appetite will return when you are well. (3) For fever, take Tylenol or Motrin in normal doses (see label on the bottle).

If nausea and/or diarrhea are present: Eat only clear liquids, soups, or juices as tolerated. Remember fluids are important to prevent dehydration.

If temperature is elevated: Fluids are doubly important. Fever medicine (such as Tylenol) should control temperature. Persistent temperature elevation of 103-104 degrees F is a danger sign.

If throat is sore: Your doctor may have cultured your throat to ensure that you do not have strep. Gargle with warm water (1/2 tsp salt in 1/2 glass of water). Try cold packs to the outside of your throat to help ease the pain of swallowing.

If your throat or nasal lining is dry: Humidification of the air you breathe (use vaporizer, pans of evaporating water, or steaming tub or shower) and lots of fluids help.

If cough is present: Drinking lots of fluids helps to moisten and loosen up sticky mucus. Non-prescription drugs designed to suppress cough are occasionally helpful. Secretions need to be coughed out of the lungs. One can best do this by (1) moistening your airways with very moist air; (2) roll from side to side on a bed; (3) cough vigorously to remove mucus and mucus plugs.

If you get worse: Simple upper respiratory tract infections rarely progress to a serious problem such as pneumonia or ear infection. Call your doctor if you are worse or if you notice: (1) very high fever despite fever medication; (2) bloody sputum or increasing chest pain; (3) increasing difficulty getting your breath; (4) stiff neck preventing bending neck and placing chin on chest; (5) drainage from ear or sinuses; (6) pain in your ears.

Return in 4 weeks for follow-up or sooner as needed.

Please contact us if you have any questions or issues about your care today, follow-up plan, or response to treatment.

Progress Notes

Jocelyn P, MA - 01/10/2024 10:35 AM PST

Formatting of this note might be different from the original.

Modified evaluation performed based on CDC protocols for COVID19.

Benefits/Risks for this **OUTPATIENT / IN PERSON** visit discussed with Patient prior to scheduling, reviewed with Patient again today.

Protocols to promote social distancing measures and reduction of infection risk including hand hygiene and PPE-use were followed.

This patient is unaccompanied in the exam room. Patient was masked.

Clinical staff is masked using a surgical mask

SUBJECTIVE

Yvonne Franklin is a 44 y.o. female who presents for:

Chief Complaint

Patient presents with

• / URI

*X 3 days *

HPI: upper respiratory illness-

Upper respiratory illness-s he notes her symptoms started about 3 d ago - the worst part is the ST and she is taking a lot of Ibuprofen. She has had some fever to 99.3

NO COVID testing done

Has not received seasonal covid or flu vaccines

Will discuss testing with Doctor, see if necessary

Upper Respiratory symptoms:

Onset of symptoms was 3 days, and symptoms have been unchanged.
Has no cough.
Has sore throat.
Had fever one day
Has no sputum production.
Has no face pain.

Current smoker? No. History of Smoking? No.

New Associated Symptoms:
Has no shortness of breath.
Has no chest pain.
Has no nausea / vomiting.
Has no history of Asthma or COPD.

The Patient is masked.
Clinical staff is masked.

Evaluation /Treatment to date: not previously seen.
Additional Symptoms: None.
Symptoms improved by:nothing.
Symptoms worsened by: nothing.

Problem list, medical/surgical history, medications, allergies, immunizations, social and family history reviewed and appropriately updated in Epic.

Review of Systems
Constitutional: Positive for fever. Negative for activity change, appetite change, chills and fatigue.
HENT: Positive for sore throat. Negative for congestion, ear pain, rhinorrhea and sinus pain.
Eyes: Negative.
Respiratory: Negative for apnea, cough, chest tightness, shortness of breath and wheezing.
Cardiovascular: Negative for chest pain, palpitations and leg swelling.
Gastrointestinal: Negative for abdominal pain, constipation, diarrhea, nausea and vomiting.
Endocrine: Negative. Negative for polyuria.

Genitourinary: Negative for dysuria, enuresis, flank pain, frequency, urgency and vaginal pain.
Musculoskeletal: Negative for arthralgias, back pain and neck pain.
Skin: Negative for pallor, rash and wound.
Neurological: Negative for syncope, weakness, light-headedness and headaches.
Hematological: Does not bruise/bleed easily.
Psychiatric/Behavioral: Negative for agitation, behavioral problems, confusion and sleep disturbance.

OBJECTIVE

BP 100/60 (Arm: RIGHT, Position: SITTING, Cuff Size: ADULT) | Pulse 72 | Temp 97.2 °F (36.2 °C) (Temporal) | Wt 130 lb 3.2 oz (59.1 kg) | LMP (LMP Unknown) | BMI 21.50 kg/m²

Physical Exam

Vitals and nursing note reviewed.
Constitutional:
Appearance: Normal appearance.
HENT:
Head: Normocephalic and atraumatic.
Right Ear: Tympanic membrane and ear canal normal.
Left Ear: Tympanic membrane and ear canal normal.
Nose: Nose normal.

Mouth/Throat:
Mouth: Mucous membranes are moist.

Eyes:
Conjunctiva/sclera: Conjunctivae normal.
Pupils: Pupils are equal, round, and reactive to light.
Cardiovascular:
Rate and Rhythm: Normal rate and regular rhythm.
Pulses: Normal pulses.

Heart
sounds: Normal heart sounds.
Pulmonary:
Effort: Pulmonary effort is normal.
Breath sounds: Normal breath sounds. No wheezing or rales.
Abdominal:
General: Abdomen is flat. Bowel sounds are normal.
Palpations: There is no mass.

Tenderness: There is no rebound.
Hernia: No hernia is present.
Musculoskeletal:
General: Normal range of motion.
Cervical back: Normal range of motion and neck supple.
Skin:
General: Skin is warm and dry.
Coloration: Skin is not jaundiced.

Findings: No bruising or lesion.
Neurological:
General: No focal deficit present.
Mental Status: She is alert and oriented to person, place, and time.
Cranial Nerves: No cranial nerve deficit.
Gait: Gait normal.
Psychiatric:
Mood and Affect: Mood normal.

Behavior: Behavior normal.

ASSESSMENT and PLAN

(J06.9) Upper respiratory tract infection, unspecified type (primary encounter diagnosis)
Comment: stable
Plan: GROUP A STREP, NAAT, COVID-19 (POINT OF CARE)
NAAT
See Handout

(J02.0) Strep pharyngitis
Comment: monitor symptoms
Plan: Amoxicillin 500 MG capsule
Do salt water gargles

Return in 4 weeks for follow-up or sooner as needed.

- Patient reminded about the importance of annual preventative care appointments.
- Discussed with patient (and guardian/parent if applicable) with treatment recommendations, any medication information (including risk and benefits of antibiotics/medication if prescribed), strict return precautions given, and when to seek immediate medical attention. Additionally, AVS printed for patient or made available online for patient on MyChart unless patient declined.
- The concerns and questions of the patient (and guardian/parent if applicable) were addressed. The patient (and guardian/parent if applicable) verbally demonstrated understanding of and agreement with the plan.

Make Me the Author Attestation: Preliminary History Recorded by Clinical Staff

Preliminary information is recorded by Clinical Staff.
Recorded information was reviewed for accuracy and edited by Denise S Kraft, MD, who also personally confirmed the chief complaint with patient and completed HPI.

Comment:

Negative results do not preclude SARS-CoV-2 infection and should not be used as the sole basis for patient management decisions. Negative results must be combined with clinical observations, patient history and epidemiological information.

The Abbott ID NOW point-of-care assay is a real-time isothermal nucleic acid amplification test intended for the qualitative detection of nucleic acid from the SARS-CoV-2 in respiratory swabs from suspected infected patients. This test has not been FDA cleared or approved. This test has been authorized by the FDA under an Emergency Use Authorization (EUA) and can only be used in that capacity.

Patient Instructions

• Patient Instructions

Denise Kraft, MD - 02/21/2024 7:52 AM PST
Formatting of this note is different from the original.
Dear Ms.Franklin

Thank you for including me in your health care today.

Here are the diagnoses that we discussed today and what we are doing about it:
ICD-10-CM
1. Impacted cerumen of right ear H61.21

(H61.21) Impacted cerumen of right ear (primary encounter diagnosis)
Comment: monitor
Plan: EAR WAX REMOVAL
Try Debrox or Cerumenex weekly to see if can help prevent build up of wax

Return in 6 months for follow-up as needed or sooner as needed.

Please contact us if you have any questions or issues about your care today, follow-up plan, or response to treatment.

Progress Notes

Rebecca B, MA - 02/21/2024 6:42 AM PST

Formatting of this note might be different from the original.

Modified evaluation performed based on CDC protocols for COVID19.

Benefits/Risks for this **OUTPATIENT / IN PERSON** visit discussed with Patient prior to scheduling, reviewed with Patient again today.

Protocols to promote social distancing measures and reduction of infection risk including hand hygiene and PPE-use were followed.

This patient is unaccompanied in the exam room. Patient was masked.

Clinical staff is masked using a surgical mask

SUBJECTIVE

Yvonne Franklin is a 44 y.o. female who presents for:

Chief Complaint

Patient presents with

• / Ear Fullness

HPI: ear wax

Patient's ears feel full and she thinks that she has ear wax and she is here for the removal.- she has this frequently and needs them cleaned

Problem list, medical/surgical history, medications, allergies, immunizations, social and family history reviewed and appropriately updated in Epic.

Patient Active Problem List

Diagnosis

• / Abdominal pain

• / Herpes simplex

• / Internal hemorrhoids

• / Migraine headache

• / Premature ventricular contractions

• / Esophageal reflux

• / Social phobia involving fear of public speaking

• / Supraventricular bigeminy

• / Tension-type headache

• / Vitamin D deficiency

• / Generalized anxiety disorder

• / Mild intermittent asthma without complication

• / Allergic rhinitis due to pollen

• / Muscle spasm of back

• / Left breast mass

• / Irritable bowel syndrome with diarrhea

• / Eosinophilic esophagitis

• / Gilbert syndrome

Health Maintenance Due

Topic / Date Due

• / IMMUNIZATION: HEPATITIS B (1 of 3 - 3-dose series) / Never done

• / IMMUNIZATION: Pneumococcal Vaccine (1 of 2 - PCV) / Never done

• / Immunization: COVID-19 (4 - 2023-24 season) / 09/01/2023

• / IMMUNIZATION: Influenza (1) / 10/01/2023

Current Medication & Allergy:

Review of Systems
Constitutional: Negative for activity change, appetite change, chills, fatigue and fever.
HENT: Negative for congestion, ear pain, rhinorrhea and sinus pain.
Eyes: Negative.
Respiratory: Negative for apnea, cough, chest tightness, shortness of breath and wheezing.
Cardiovascular: Negative for chest pain, palpitations and leg swelling.
Gastrointestinal: Negative for abdominal pain, constipation, diarrhea, nausea and vomiting.
Endocrine: Negative. Negative for polyuria.

Genitourinary: Negative for dysuria, enuresis, flank pain, frequency, urgency and vaginal pain.
Musculoskeletal: Negative for arthralgias, back pain and neck pain.

Skin: Negative for pallor, rash and wound.
Neurological: Negative for syncope, weakness, light-headedness and headaches.
Hematological: Does not bruise/bleed easily.
Psychiatric/Behavioral: Negative for agitation, behavioral problems, confusion and sleep disturbance.

OBJECTIVE

BP 98/62 (Arm: LEFT, Position: SITTING) | Pulse 78 | Temp 97.3 °F (36.3 °C) (Temporal) | Resp 16 | Ht 5' 5.25" (1.657 m) | Wt 129 lb (58.5 kg) | BMI 21.30 kg/m²

Physical Exam

Vitals and nursing note reviewed.
Constitutional:
Appearance: Normal appearance.
HENT:
Head: Normocephalic and atraumatic.
Right Ear: Tympanic membrane and ear canal normal. There is impacted cerumen.
Left Ear: Tympanic membrane, ear canal and external ear normal.
Mouth/Throat:

Mouth: Mucous membranes are moist.
Eyes:
Conjunctiva/sclera: Conjunctivae normal.
Pupils: Pupils are equal, round, and reactive to light.
Cardiovascular:
Rate and Rhythm: Normal rate and regular rhythm.
Pulses: Normal pulses.
Heart sounds: Normal heart sounds.

Pulmonary:
Effort: Pulmonary effort is normal.
Breath sounds: Normal breath sounds. No wheezing or rales.
Abdominal:
General: Abdomen is flat. Bowel sounds are normal.
Palpations: There is no mass.
Tenderness: There is no rebound.
Hernia: No hernia is present.

Musculoskeletal:
General: Normal range of motion.
Cervical back: Normal range of motion and neck supple.
Skin:
General: Skin is warm and dry.
Coloration: Skin is not jaundiced.
Findings: No bruising or lesion.
Neurological:

General: No focal deficit present.
Mental Status: She is aler

t and oriented to person, place, and time.
Cranial Nerves: No cranial nerve deficit.
Gait: Gait normal.
Psychiatric:
Mood and Affect: Mood normal.
Behavior: Behavior normal.

Wax was partially removed with curetting and then the right canal was irrigated. The canal was totally cleared fo wax

ASSESSMENT and PLAN

(H61.21) Impacted cerumen of right ear (primary encounter diagnosis)
Comment: monitor
Plan: EAR WAX REMOVAL
Try Debrox or Cerumenex weekly to see if can help prevent build up of wax

Return in 6 months for follow-up as needed or sooner as needed.

- Patient reminded about the importance of annual preventative care appointments.
- Discussed with patient (and guardian/parent if applicable) with treatment recommendations, any medication information (including risk and benefits of antibiotics/medication if prescribed), strict return precautions given, and when to seek immediate medical attention. Additionally, AVS printed for patient or made available online for patient on MyChart unless patient declined.
- The concerns and questions of the patient (and guardian/parent if applicable) were addressed. The patient (and guardian/parent if applicable) verbally demonstrated understanding of and agreement with the plan.

Make Me the Author Attestation: Preliminary History Recorded by Clinical Staff

Preliminary information is recorded by Clinical Staff.
Recorded information was reviewed for accuracy and edited by Denise S Kraft, MD, who also personally confirmed the chief complaint with patient and completed HPI.

Leilani Paras, MD - 07/17/2024 12:26 PM PDT

Formatting of this note is different from the original.
Dear Ms.Franklin

Thank you for including me in your health care today.

Here are the diagnoses that we discussed today and what we are doing about it:

ICD-10-CM
1. Preventative health care Z00.00
2. Generalized anxiety disorder F41.1
3. Mild intermittent asthma without complication J45.20
4. Irritable bowel syndrome with diarrhea K58.0
5. Social phobia involving fear of public speaking F40.10
6. Migraine without aura and without status migrainosus, not intractable G43.009
7. Herpes simplex B00.9
8. Gastroesophageal reflux disease without esophagitis K21.9
9. Encounter for general adult medical examination w/o abnormal findings Z00.00
10. Pharyngeal dysphagia R13.13
11. Abdominal cramping R10.9
12. Vitamin D deficiency E55.9

Restart citalopram 20mg daily and as-needed alprazolam.

Follow-up appointment regarding citalopram in 2-3 months (video visit ok)
Continue current medications otherwise
For bone health- make sure to get regular weight bearing exercise, 500 mg calcium twice a day and 1,000 IU Vit D daily.
The calcium is better absorbed through dietary sources. (600 mg of calcium is about 10-12 oz of cheese, milk or yogurt. They have good lists of calcium content in foods online.) But if you aren't getting enough calcium through your diet, then getting it through a supplement is better than not getting enough.
Please make an appointment with Dr. Selinger
Please make an appointment for your mammogram.
Return to clinic 1 year for complete physical exam, sooner as needed

Prescriptions Signed In This Encounter

Medications
Citalopram 20 MG tablet
Sig: Take 1 tablet by mouth daily.
Dispense: 100 tablet
Refill: 0

ALPRAZolam 0.5 MG tablet
Sig: Take 0.5-1 tablets by mouth 2 times daily as needed for anxiety (for panic attacks). May repeat in 6-8 hours if needed. May cause sedation
Dispense: 15 tablet
Refill: 0
propranolol 10 MG tablet
Sig: Take 1 tablet by mouth daily.
Dispense: 100 tablet
Refill: 3
dicyclomine 10 MG capsule
Sig: Take 1 capsule by mouth 4 times daily as needed (colonic spasms).
Dispense: 30 capsule
Refill: 3
ValACYclovir 1 g tablet
Sig: 2 tablets Q12 hrs x 1 day as needed herpes outbreak
Dispense: 8 tablet
Refill: 3
SUMAtriptan (Imitrex) 100 MG tablet
Sig: TAKE 1 TABLET BY MOUTH AT ONSET OF HEADACHE, MAY TAKE 1 AND REPEAT IN 2 HOURS IF HEADACHE REMAINS, MAX 2 TABLETS PER 24 HOURS
Dispense: 9 tablet
Refill: 5
albuterol HFA (Proventil, Ventolin, ProAir) 90 MCG/ACT inhaler
Sig: Take 2 puffs by inhalation every 4 to 6 hours as needed for wheezing or shortness of breath. Not to exceed 10 puffs/24 hours.
Dispense: 18 g
Refill: 2
May sub ProAir, Proventil or Ventolin at same directions, same refills.

Progress Notes

Leilani Paras, MD - 07/17/2024 11:49 AM PDT

Formatting of this note might be different from the original.

Subjective:

Patient is a 45 y.o. female who presents for a complete physical exam. Current concerns include: endoscopy/somach issues , pre menopause?, anxiety

Concerns: see below
Diet: Healthy overall, hubby is a good chef
Exercise: Poorly, no exercise because of work
Sleep: sleeps efficiently when she does sleep between 12-6AM
Voiding: No issues with urination or BMs. No rectal bleeding

Work: New job 1.5 years ago - it's worse than her last one, no work/life balance, stressful. Working around the clock, works 8AM-6PM, then works again at night from 8PM- midnight. She's burned out. Works on the weekend. Has made her more anxious
Household: Lives with husband and 2 kids
EtOH: 1 glass of wine daily - it helps her relax
Tobacco: None
Drug: None

Menstruation: no menses on Mirena IUD
Sexually activity / contraception: Mirena IUD - placed in 2017 (needing replacement 2025)

Immunizations:
Pneumonia vaccine: PCV20 - declining
TdaP vaccine: 11/15/16
Flu vaccine: n/a, not currently the flu season
Hepatitis B vaccine: declining
Shingrix: n/a
COVID vaccines: Declining new COVID shot
RSV vaccine: n/a

Screening:

- last pap 5/26/21 -NILM, HPV neg
- last mammogram and ultrasound 12/29/21 - recommended short interval follow-up ultrasound 6mos for left breast (Evergreen). Will make an appointment for mammogram
- last colonoscopy 10/18/21 - cleared x 5 yrs (Dr. Selinger)

Medications as noted below. Working well without side effects.

Had breast reduction 2 years ago
Path was normal.
Will schedule mammogram at Evergreen

Perimenopause.

Sometimes forgetful but she realizes that this is likely stress related.
No other symptoms - including no hot flashes, night sweats, or sleep issues

GAD.
Had been on citalopram 20mg - had decreased libido but symptoms were tolerable. She never did bump up to 30mg daily dose.
She stopped taking citalopram last year
She has a constant internal fight on whether to take medication or not, so she stopped.
She realizes now that she needs to stop fighting it and restart her medication.
She is open to doing that today
Had also been on alprazolam 0.5mg as needed in the past - last refilled on 2/15/23 - #15, no refill
We reviewed the potential for addiction and abuse with alprazolam. She expressed understanding

Prior treatment:
Sertraline 100mg- caused sedation, felt more anxious and uneasy. 50mg was not effective

Mild intermittent asthma.
Albuterol HFA as needed - rarely needs it.
Does not recall the last time she used her inhaler, had used it max once a year when she used it. The last time she used it was at least > 1 year ago
Needing refill because her current inhaler is expired
Declining PCV20 today

Migraines.

Controlled mostly with propranolol 10mg daily. Takes Sumatriptan as needed - works when she takes it immediately.
No increase in migraines despite increased stressors

Fear of public speaking. Propranolol 10mg daily is helping.

HSV I. Valacyclovir as needed, works well as needed

Abdominal cramping / irritable bowel syndrome.
Dicyclomine as needed - has not needed to take it.
Needing refill because hers are likely expired
EGD / colonoscopy 10/18/21 (Dr. Selinger)

GERD. Findings seen on EGD.
Has not been using omeprazole because she's not having issues. Will let me know if she needs refill

Dysphagia.
Wonders if she needs another endoscopy -
For the last 3 months, she has noted:
(1) a tightening in her throat after eating. Not extreme, stays for a few minutes and then resolves. Does not feel her airway is closing.
(2) Feels like things get stuck more often after swallowing, despite cutting up her food well

Vit D def.

Has not been taking Vit D

GAD-7 --- Anxiety --- last 2 weeks

Anxiety is likely if:

(A)at least 1 of the f
irst 2 items(GAD-2) is present **and** the Sum of the first 2 items is > 3
(B) at least a score of 5 points or greater for all items is present.
The overall ***Anxiety Severity*** is the **sum** of ratings of all the 7 items

PATIENT'S TOTALS ***6 *: *15* **

Cut-offs for severity of Anxiety: 3 : 5

**GAD-2 score = *6 *
>3 **pts suggests anxiety

Anxiety Severity = *15*

| **0 - 4** | Generalized Anxiety
Disorder: None | No treatment recommended (or Continue current maintenance treatment) |

5 - 9 / Mild / Counseling (or Consider adjusting current treatment)

10 - 14 / Moderate / Medication and/or Counseling; evaluate for other anxiety disorders such as panic disorder, or PTSD

15 - 21 / Severe / Medication, Counseling, evaluate for other anxiety disorders such as panic disorder, or PTSD; consider referral to Psychiatry

5/26/2021 / 2/15/2023 / 5/26/2023 / 7/17/2024

GAD-7

1.) Feeling nervous, anxious or on edge / **3 - Nearly every day[image:Abnormal]** / **3 - Nearly every day[image:Abnormal]** / 1 - Several days / **3 - Nearly every day[image:Abnormal]**

2.) Not being able to stop or control worrying / **3 - Nearly every day[image:Abnormal]** / **3 - Nearly every day[image:Abnormal]** / 1 - Several days / **3 - Nearly every day[image:Abnormal]**

3.) Worrying too much about different things / **3 - Nearly every day[image:Abnormal]** / **3 - Nearly every day[image:Abnormal]** / 1 - Several days / 0 - Not at all

4.) Trouble relaxing / **3 - Nearly every day[image:Abnormal]** / **2 - More than half the days[image:Abnormal]** / 1 - Several days / **3 - Nearly every day[image:Abnormal]**

5.) Being so restless that it is hard to sit still / **3 - Nearly every day[image:Abnormal]** / **2 - More than half the days[image:Abnormal]** / 0 - Not at all / **3 - Nearly every day[image:Abnormal]**

6.) Becoming easily annoyed or irritable / **2 - More than half the days[image:Abnormal]** / 1 - Several days / 0 - Not at all / **3 - Nearly every day[image:Abnormal]**

7.) Feeling afraid as if something awful might happen / 0 - Not at all / 0 - Not at all / 0 - Not at all / 0 - Not at all

GAD-7 Score (0-21) / 17 / 14 / 4 / 15

If you checked any problems, how difficult have they made it for you to do your work, take care of things at home, or get along with other people? / Extremely difficult

Make Me the Author Attestation: Preliminary History Recorded by Clinical Staff

Preliminary information is rec
orded by Clinical Staff. Recorded information was reviewed for accuracy and edited by Leilani D Paras, MD, who also personally confirmed the chief complaint with patient and completed HPI.

Objective:

BP 102/62 | Pulse 78 | Temp 97.5 °F (36.4 °C) | Ht 5' 5" (1.651 m) | Wt 125 lb 12.8 oz (57.1 kg) | BMI 20.93 kg/m²

Physical Exam

Vitals reviewed.
Constitutional:
General: She is not in acute distress.
HENT:
Head: Normocephalic and atraumatic.
Right Ear: Tympanic membrane, ear canal and external ear normal.
Left Ear: Tympanic membrane, ear canal and external ear normal.
Nose: Nose normal.

Mouth/Throat:
Mouth: Mucous membranes are moist.
Eyes:
Conjunctiva/sclera: Conjunctivae normal.
Pupils: Pupils are equal, round, and reactive to light.
Neck:
Thyroid: No thyroid mass, thyromegaly or thyroid tenderness.
Cardiovascular:

Rate and Rhythm: Normal rate and regular rhythm.
Heart sounds: Normal heart sounds.
Pulmonary:
Effort: Pulmonary effort is normal.
Breath sounds: Normal breath sounds.
Chest:

Breasts:
Right: Normal. No mass, nipple discharge, skin change or tenderness.

Left: Normal. No mass, nipple discharge, skin change or tenderness.
Comments: **Well-healed scars s/p breast reduction bilaterally**
Abdominal:
General: Bowel sounds are normal.
Palpations: Abdomen is soft. There is no mass.
Tenderness: There is no abdominal tenderness. There is no guarding or rebound.
Musculoskeletal:
Right lower leg: No edema.

Left lower leg: No edema.
Lymphadenopathy:
Cervical: No cervical adenopathy.
Upper Body:
Right upper body: No supraclavicular or axillary adenopathy.
Left upper body: No supraclavicular or axillary adenopathy.
Skin:
General: Skin is warm.

Capillary Refill: Capillary refill takes less than 2 seconds.
Neurological:
General: No focal deficit present.
Mental Status: She is alert and oriented to person, place, and time.
Psychiatric:
Mood and Affect: Affect normal. Mood is anxious.
Speech: Speech normal.
Behavior: Behavior normal. Behavior is cooperative.

Thought Content: Thought content normal.

- See AVS below for management / plan.
- Restart citalopram 20mg daily and as-needed alprazolam
- Follow-up appointment regarding citalopram in 2-3 months (video visit ok)
- Return to clinic 1 year for complete physical exam. Return to clinic sooner as needed.

- Discussed / reviewed indications, risks, benefits, side effects, and proper use of med(s) given today. Questions / concerns re: medication(s) addressed.
- PDMP reviewed and consistent
- Patient expressed understanding and agreement with above treatment plan.

Patient Instructions

Dear Ms.Franklin

Thank you for including me in your health care today.

Here are the diagnoses that we discussed today and what we are doing about it:

ICD-10-CM

1. / **Preventative health care** / **Z00.00**

2. / Generalized anxiety disorder / F41.1

3. / Mild intermittent asthma without complication / J45.20

4. / Irritable bowel syndrome with diarrhea / K58.0

5. / Social phobia involving fear of public speaking / F40.10

6. / Migraine without aura and without status migrainosus, not intractable / G43.009

7. / Herpes simplex / B00.9

8. / Gastroesophageal reflux disease without esophagitis / K21.9

9. / Encounter for general adult medical examination w/o abnormal findings / Z00.00

10. / Pharyngeal dysphagia / R13.13

11. / Abdominal cramping / R10.9

12. / Vitamin D deficiency / E55.9

Restart citalopram 20mg daily and as-needed alprazolam.

Follow-up appointment regarding citalopram in 2-3 months (video visit ok)

Continue current medications otherwise

For bone health- make sure to get regular weight bearing exercise, 500 mg calcium twice a day and 1,000 IU Vit D daily.
The calcium is better absorbed through dietary sources. (600 mg of calcium is about 10-12 oz of cheese, milk or yogurt. They have good lists of calcium content in foods online.) But if you aren't getting enough calcium through your diet, then getting it through a supplement is better than not getting enough.

Please make an appointment with Dr. Selinger

Please make an appointment for your mammogram.

Return to clinic 1 year for complete physical exam, sooner as needed

Prescriptions Signed In This Encounter

Medications

• / Citalopram 20 MG tablet

Sig: Take 1 tablet by mouth daily.

Dispense: 100 tablet

Refill: 0

• / ALPRAZolam 0.5 MG tablet

Sig: Take 0.5-1 tablets by mouth 2 times daily as needed for anxiety (for panic attacks). May repeat in 6-8 hours if needed. May cause sedation

Dispense: 15 tablet

Refill: 0

• / propranolol 10 MG tablet

Sig: Take 1 tablet by mouth daily.

Dispense: 100 tablet

Refill: 3

• / dicyclomine 10 MG capsule

Sig: Take 1 capsule by mouth 4 times daily as needed (colonic spasms).

Dispense: 30 capsule

Refill: 3

• / ValACYclovir 1 g tablet

Sig: 2 tablets Q12 hrs x 1 day as needed herpes outbreak

Dispense: 8 tablet

Refill: 3

• / SUMAtriptan (Imitrex) 100 MG tablet

| | | Sig: TAKE 1 TABLET BY
MOUTH AT ONSET OF HEADACHE, MAY TAKE 1 AND REPEAT IN 2 HOURS IF HEADACHE REMAINS, MAX 2 TABLETS PER 24 HOURS |

Dispense: 9 tablet

Refill: 5

• / albuterol HFA (Proventil, Ventolin, ProAir) 90 MCG/ACT inhaler

Sig: Take 2 puffs by inhalation every 4 to 6 hours as needed for wheezing or shortness of breath. Not to exceed 10 puffs/24 hours.

Dispense: 18 g

Refill: 2

May sub ProAir, Proventil or Ventolin at same directions, same refills.

Additional orders placed in this encounter

Procedures

• / CBC no diff

• / Comprehensive metabolic panel

• / Lipid

• / TSH REFLEX TO FT4

• / VIT D (12 OH VITAMIN D)

• / REFERRAL / CONSULT TO GASTROENTEROLOGY

Leilani Paras, MD - 10/11/2024 7:23 AM PDT
Formatting of this note is different from the original.
Dear Ms.Franklin

Thank you for including me in your health care today.

Here are the diagnoses that we discussed today and what we are doing about it:
ICD-10-CM
1. Generalized anxiety disorder F41.1

-Increase citalopram to 20mg daily.
-Continue rare use of alprazolam as needed.
-Try switching citalopram to the AM x 1-2 weeks and see if sleep gets better.
- If you cannot tolerate the 20mg dose, please send me a MyChart message and we will try 10mg tablet @ 1.5 tablets daily (15mg dose) to see if you can tolerate it.
- Monitor symptoms.
- Make follow-up appointment 1 month (video visit ok)
- If you're doing well, then message me via MyChart and you can cancel the follow-up appointment in 1 month
- Return to clinic / call sooner if symptoms increase/change

Prescriptions Signed In This Encounter
Medications
citalopram (CeleXA) 20 MG tab
Sig: Take 1 tablet by mouth daily.
Dispense: 100 tablet
Refill: 0

No orders of the defined types were placed in this encounter.

Please contact us if you have any questions or issues about your care today, follow-up plan, or response to treatment.

Progress Notes

Leilani Paras, MD - 10/11/2024 6:58 AM PDT

Formatting of this note might be different from the original.

Modified evaluation performed based on CDC protocols for COVID19.

The pros and cons of a video visit for providing this care was reviewed with Yvonne Franklin, and their verbal consent has been given to deliver this visit.

This **VIDEO** visit was conducted in real time, via synchronous interactive video & audio conferencing technology (Epic Video Client),
with patient located at home and, Leilani D Paras, MD located at EFMC FAMILY MEDICINE

Discussed with patient/parent: You have chosen to receive care through the use of telemedicine.
Telemedicine enables health care providers at different locations to provide safe, effective, and convenient care through the use of technology.
As with any health care service, there are risks associated with the use of telemedicine, including equipment failure, poor image resolution, and information security issues.
You also understand that I cannot physically examine you and that you may need to come to clinic to complete the assessment.

I have discussed the benefits of MyChart. Patient is already signed up for MyChart.

Patient Verifier : Yvonne Franklin, 6/17/1979
Patient is accompanied by her self in the video visit.

Do you consent to the use of telemedicine in your medical care today? Yes

Patient/parent verbally understands the risks and benefits of telemedicine as explained.
All questions regarding telemedicine answered.
Preferred phone number to contact patient is :360-201-2728

Is it okay to leave a detailed voicemail on this number? Yes

Subjective:

Yvonne Franklin is a 45 y.o. female She

Chief Complaint

Patient presents with

• / Anxiety

Follow up

HPI:

Patient is seen today via video visit for for med check on citalopram 20mg for anxiety
Due to technical difficulties, video visit was done via phone.

-Her citalopram was restarted at her last complete physical exam 7/17/24.
-She is taking 1/2 tablet daily
-She tried to take 1 tablet at night and could not sleep.
Went back to 1/2 tablet and side effects resolved.
-She feels like it's helping but she feels like she could use a little more help from the medication.
-Her husband has noted an improvement in her stress level.
-She also can feel it in her brain, feels like "it's taking over my brain." She's aware it's in her system and in her body.
-She is still hesitant to taking medications for her anxiety. She still feels like she should be able to do it without need for meds.

-Also taking alprazolam 0.5mg as needed. Last refilled on 7/17/24 - #15, no refill
She hasn't used any alprazolam since last visit.

Tolerating 10mg citalopram dose well without side effects

Problem list, medical/surgical history, medications, allergies, immunizations, social and family history reviewed and appropriately updated in Epic.

Current Outpatient Medications on File Prior to Visit

Medication / Sig / Dispense / Refill

• / Cholecalciferol (VITAMIN D3) 1.25 MG (50000 UT) capsule / Take 1 capsule by mouth once a week. / 12 capsule / 0

| • | ALPRAZolam 0.5 MG tablet | Take 0.5-1 tablets by mouth 2 times daily as needed for anxiety (for panic attacks). May repeat in 6-8 hours if
needed. May cause sedation | 15 tablet | 0 |

• / propranolol 10 MG tablet / Take 1 tablet by mouth daily. / 100 tablet / 3

• / dicyclomine 10 MG capsule / Take 1 capsule by mouth 4 times daily as needed (colonic spasms). / 30 capsule / 3

• / ValACYclovir 1 g tablet / 2 tablets Q12 hrs x 1 day as needed herpes outbreak / 8 tablet / 3

• / SUMAtriptan (Imitrex) 100 MG tablet / TAKE 1 TABLET BY MOUTH AT ONSET OF HEADACHE, MAY TAKE 1 AND REPEAT IN 2 HOURS IF HEADACHE REMAINS, MAX 2 TABLETS PER 24 HOURS / 9 tablet / 5

• / albuterol HFA (Proventil, Ventolin, ProAir) 90 MCG/ACT inhaler / Take 2 puffs by inhalation every 4 to 6 hours as needed for wheezing or shortness of breath. Not to exceed 10 puffs/24 hours. / 18 g / 2

• / Omeprazole 20 MG delayed release capsule / Take 1 capsule by mouth daily 30 minutes prior to a meal. / 90 capsule / 3

• / Spacer/Aero-Holding Chambers (PRO COMFORT SPACER ADULT) miscellaneous / Use 1 each as needed. / 1 each / 0

• / Levonorgestrel (Mirena) 52 MG IUD / Mirena (52 MG) 20MCG/24HR Intrauterine Intrauterine device QTY: 0 Days: 0 Refills: 0 Written: 09/18/19 Patient Instructions: Inserted 2017 at OB/GYN.

• / [DISCONTINUED] Citalopram 20 MG tablet / Take 1 tablet by mouth daily. / 100 tablet / 0

No current facility-administered medications on file prior to visit.

Review of Systems negative except as noted in HPI above

Reviewed and updated this visit by provider:
Allergies | Meds | Problems |

Objective:

Patient Reported Vitals (Extended)

Weight: 126 lb (57.2 kg)

Limited Exam via patient's / Parent's video

Physical Exam

Constitutional:
General: She is not in acute distress.
Neurological:
Mental Status: She is alert and oriented to person, place, and time.
Psychiatric:
Mood and Affect: Mood is anxious **(mild)**.
Speech: Speech normal.
Behavior: Behavior normal. Behavior is not aggressive, withdrawn, hyperactive or combative. Behavior is cooperative.

Thought Content: Thought content normal.
Judgment: Judgment normal.

Assessment and Plan:

ICD-10-CM

1. / **Generalized anxiety disorder** / **F41.1** / **citalopram (CeleXA) 20 MG tab**

- See AVS. This is made available online for patient on MyChart since today's visit was a video visit.

-Increase citalopram to 20mg daily.
-Continue rare use of alprazolam as needed.
-Try switching citalopram to the AM x 1-2 weeks and see if sleep gets better.

- If you cannot tolerate the 20mg dose, please send me a MyChart message and we will try 10mg tablet @ 1.5 tablets daily (15mg dose) to see if you can tolerate it.

- Monitor symptoms.

- Make follow-up appointment 1 month (video visit ok)

- If you're doing well, then message me via MyChart and you can cancel the follow-up appointment in 1 month
- Return to clinic / call sooner if symptoms increase/change
- Discussed / reviewed indications, risks, benefits, side effects, and proper use of med(s) given today. Questions / concerns re: medication(s) addressed.
- Patient expressed understanding and agreement with above treatment plan.

Make Me the Author Attestation: Preliminary History Recorded by Clinical Staff

Preliminary information is recorded by Clinical Staff.
Recorded information was reviewed for accuracy and edited by Leilani D Paras, MD, who also personally confirmed the chief complaint with patient and completed HPI.

Patient Instructions

- Patient Instructions

Leilani Paras, MD - 11/15/2024 7:19 AM PST

Formatting of this note is different from the original.

Dear Ms.Franklin

Thank you for including me in your health care today.

Here are the diagnoses that we discussed today and what we are doing about it:
ICD-10-CM
1. Generalized anxiety disorder F41.1

-Continue citalopram.
-Follow-up via MyChart message in 6 months
-Return to clinic in July for scheduled complete physical exam.
-Return to clinic / call sooner if symptoms increase/change.

Prescriptions Signed In This Encounter
Medications
citalopram (CeleXA) 20 MG tab
Sig: Take 1 tablet by mouth daily.
Dispense: 100 tablet
Refill: 1

No orders of the defined types were placed in this encounter.

Please contact us if you have any questions or issues about your care today, follow-up plan, or response to treatment.

Progress Notes

Leilani Paras, MD - 11/15/2024 7:05 AM PST

Formatting of this note might be different from the original.
This **VIDEO** visit was conducted in real time, via synchronous interactive video & audio conferencing technology, utilizing the HIPAA compliant MyChart Epic Video Client Platform.
Patient is located in their home/work/car in the state of Washington.
Leilani D Paras, MD is located in the EFMC FAMILY MEDICINE office and is licensed in the state of Washington.

Discussed with patient/parent: You have chosen to receive care through the use of telemedicine.
Telemedicine enables health care providers at different locations to provide safe, effective, and convenient care through the use of technology.
As with any health care service, there are risks associated with the use of telemedicine, including equipment failure, poor image resolution, and information security issues.
You also understand that I cannot physically examine you and that you may need to come to clinic to complete the assessment.

I have discussed the benefits of MyChart. Patient is already signed up for MyChart.

Patient Verifier : Yvonne Franklin, 6/17/1979
Patient is accompanied by herself in the video visit.

Do you consent to the use of telemedicine in your medical care today? Yes

Patient/parent verbally understands the risks and benefits of telemedicine as explained.
All questions regarding telemedicine answered.
Preferred phone number to contact patient is :360-201-2728

Is it okay to leave a detailed voicemail on this number? Yes

Subjective:

Yvonne is a 45 y.o. female who presents for:

Chief Complaint

Patient presents with

• / Medication Mgmt

HPI:

Yvonne is seen via video visit for follow-up anxiety
She was last seen 10/11/24 for this.

At that appointment, we had her:

- she noted an improvement of her symptoms at citalopram 10mg daily
- we had her increase citalopram to 20mg daily
- try switching her citalopram to the morning, since it caused insomnia when she took it at night
- continue use of alprazolam as needed

Since last appointment:

- Her anxiety has improved with 20mg daily dosing. Better overall, doesn't have anxiety 24/7.
- She feels like this is a good dose for her.
- No side effects. No insomnia since she switched to AM dosing
- Use of alprazolam? Has not needed to take it. (Alprazolam 0.5mg - last refilled 7/17/24 - #15, no refill)

Patient Active Problem List

Diagnosis

• / Abdominal pain

• / Herpes simplex

• / Internal hemorrhoids

• / Migraine headache

- / Premature ventricular contractions
- / Esophageal reflux
- / Social phobia involving fear of public speaking
- / Supraventricular bigeminy
- / Tension-type headache
- / Vitamin D deficiency
- / Generalized anxiety disorder
- / Mild intermittent asthma without complication
- / Allergic rhinitis due to pollen
- / Muscle spasm of back
- / Left breast mass
- / Irritable bowel syndrome with diarrhea
- / Eosinophilic esophagitis
- / Gilbert syndrome

Social History

Tobacco Use

- / Smoking status: / Never

- / Smokeless tobacco: / Never

Substance Use Topics

- / Alcohol use: / Not Currently

Allergies

Allergen / Reactions

- / Fentanyl / Adverse Drug Reaction
- / Propofol / Adverse Drug Reaction

Current Outpatient Medications:

- citalopram (CeleXA) 20 MG tab
- ALPRAZolam 0.5 MG tablet
- propranolol 10 MG tablet
- dicyclomine 10 MG capsule
- ValACYclovir 1 g tablet
- SUMAtriptan (Imitrex) 100 MG tablet
- albuterol HFA (Proventil, Ventolin, ProAir) 90 MCG/ACT inhaler
- Omeprazole 20 MG delayed release capsule
- Spacer/Aero-Holding Chambers (PRO COMFORT SPACER ADULT) miscellaneous
- Levonorgestrel (Mirena) 52 MG IUD

Review of Systems
negative except as noted in HPI above

Reviewed and updated this visit by provider:
Allergies | Meds | Problems |

Objective:

Limited Exam via Patient's / Parent's video

Physical Exam

Constitutional:
General: She is not in acute distress.
Pulmonary:
Effort: Pulmonary effort is normal. No respiratory distress.
Neurological:
General: No focal deficit present.
Mental Status: She is alert and oriented to person, place, and time.
Psychiatric:

Mood and Affect: Mood and affect normal.
Speech: Speech normal.
Behavior: Behavior normal. Behavior is cooperative.
Thought Content: Thought content normal.
Judgment: Judgment normal.

Assessment and Plan:

ICD-10-CM

1. / **Generalized anxiety disorder** / **F41.1** / **citalopram (CeleXA) 20 MG tab**

- See AVS. This is made available online for patient on MyChart since today's visit was a video visit.

-Continue citalopram.
-Follow-up via MyChart message in 6 months
-Return to clinic in July for scheduled complete physical exam.
-Return to clinic / call sooner if symptoms increase/change.

- Discussed / reviewed indications, risks, benefits, side effects, and proper use of med(s) given today. Questions / concerns re: medication(s) addressed.

- Patient expressed understanding and agreement with above treatment plan.

Make Me the Author Attestation: Preliminary History Recorded by Clinical Staff

Preliminary information is recorded by Clinical Staff.
Recorded information was reviewed for accuracy and edited by Leilani D Paras, MD, who also personally confirmed the chief complaint with patient and completed HPI.

Dear Ms.Franklin

Thank you for including me in your health care today.

Here are the diagnoses that we discussed today and what we are doing about it:
ICD-10-CM
1. Preventative health care Z00.00
2. Generalized anxiety disorder F41.1
3. Mild intermittent asthma without complication J45.20
4. Migraine without aura and without status migrainosus, not intractable G43.009
5. Social phobia involving fear of public speaking F40.10
6. Herpes simplex B00.9
7. Vitamin D deficiency E55.9
8. Irritable bowel syndrome with diarrhea K58.0
9. Gastroesophageal reflux disease without esophagitis K21.9
10. Abdominal cramping R10.9
11. Other acute gastritis without hemorrhage K29.00
12. Generalized anxiety disorder F41.1
13. Oropharyngeal dysphagia R13.12

Restart citalopram 20mg - 1/2 tablet daily for 1 wk then increase to 1 tablet daily thereafter. Please send a MYChart message in 1 month to let me know how you're doing.

Continue current medications

Please make an appointment with Dr. Selinger

We're checking labs and will contact you via MyChart

Please make an appointment for your Mirena IUD - removal and re-insertion of new one.

Return to clinic 1 year for complete physical exam, sooner as needed

Progress Notes

Leilani Paras, MD - 07/18/2025 8:03 AM PDT

Formatting of this note might be different from the original.

Subjective:

This patient is unaccompanied in the exam room.
Yvonne Franklin is a 46 y.o. female who is here for:

Chief Complaint

Patient presents with

• / Physical

| | | *Patient is here for a Annual Physical Exam patient is fasting*
Patient see eye dr every year or two
Patient gets exercises every week |

Just got back from 2 week trip from Hawaii

Concerns: see below
Diet: Healthy overall, hubby is a good chef
Exercise: No exercise usually because of work. But she exercised every day while in Hawaii

Sleep: sleeps efficiently when she does sleep between 12-6AM
Voiding: Feeling constantly bloated, feels like her gut is out of wack. No issues with urination or BMs. No rectal bleeding

Work: Still at previous job - no work/life balance, stressful. Working around the clock. Interviewing for new job.
Household: Lives with husband and 2 kids
EtOH: 1-2 glasses of wine daily - it helps her relax. We discussed keeping it down to 1 drink/day
Tobacco: None
Drug: None

Menstruation: no menses on Mirena IUD until recently, has occasional spotting
Sexually activity / contraception: Mirena IUD - placed in 2017 (needing replacement 2025) - will make an appointment for removal and re-insertion.

Immunizations: These were reviewed with patient today
Pneumonia vaccine: PCV20 - declining
TdaP vaccine: 11/15/16
Flu vaccine: n/a, not currently the flu season
Hepatitis B vaccine: declining
Shingrix: n/a
COVID vaccines: Declining new COVID shot
RSV vaccine: n/a

Screening:

- last pap 5/26/21 -NILM, HPV neg (due 2026)
- last mammogram and ultrasound 4/10/25 - neg
- last colonoscopy 10/18/21 - cleared x 5 yrs (Dr. Selinger)

GAD.
-Last seen for this on 11/15/24.
-At that time, her increased citalopram dose (20mg) was helping
-No side effects. No insomnia since switching to AM dosing
-No longer taking her citalopram. She was traveling a lot for a couple of months and forgot to take it with her. But would like to restart. She thinks it would help with the upcoming transition and with the drinking
-Alprazolam use - sparingly. Worked well when she used it.
-Alprazolam 0.5mg - last refilled 7/17/24 - #15, no refill
-Prior treatment:

-Sertraline 100mg- caused sedation, felt more anxious and uneasy. 50mg was not effective

Mild intermittent asthma.
-Albuterol HFA as needed - rarely needs it.
-Has used it 3 times in the last year.
-Not needing refill, will let me know if/when she needs refill
-Declining PCV20 today

Migraines.

-Controlled mostly with propranolol 10mg daily.
-Takes Sumatriptan as needed - works when she takes it immediately.
-Has not had any migraines for a long time. Not needing triptan refill at this time, will let me know if/when she does

Fear of public speaking. Propranolol 10mg daily is helping.

HSV I. Valacyclovir as needed, works well as needed

Vit D def.

-not taking Vit D
-she spent 2 weeks in HI - outside x 8 hrs/day, wore sunscreen

Abdominal cramping / irritable bowel syndrome.
-Dicyclomine as needed - has not needed to take it.
-EGD / colonoscopy 10/18/21 (Dr. Selinger)

GERD.
-Findings seen on EGD.
-Has not been using omeprazole, will let me know if/when she needs refill

Dysphagia.
-Had increased symptoms last year and was referred back to GI.
-Didn't get a chance to see GI last year, would like to re-referral
-No episodes of food getting stuck. Symptoms may be better, definitely not worse.

Health Maintenance items addressed during this visit:

All Health care Maintenance items pended for provider review. See orders for items that patient agreed to perform.

Health Care Maintenance Items:

The following healthcare maintenance items were reviewed regarding risks / benefits and were either accepted or declined.

For those accepted, the appropriate lab tests were ordered, appointments made and / or phone numbers given for patient to follow up.
For those that were declined, the pt declined despite fully understanding that by foregoing this (these) procedure(s), they increase their risk of undiagnosed cancer or disease and a potential missed opportunity for early detection, prevention or treatment.
The patient admits that they understand that this is against medical advice of their doctor and state that they freely choose with full informed consent to not participate in this screening / testing process.

There are no preventive care reminders to display for this patient.

Last Colonoscopy / Diabetic Eye Exam

This patient has no relevant Health Maintenance data.

Last Diabetic Eye Exam

This patient has no relevant Health Maintenance data.

Social History

Substance and Sexual Activity

Alcohol Use / 1-2 glasses of wine each night.

Patient does not have a diagnosis of hypertension on their problem list.

3. / Mild intermittent asthma without complication / J45.20

4. / Migraine without aura and without status migrainosus, not intractable / G43.009 / propranolol (Inderal) 10 MG tab

5. / Social phobia involving fear of public speaking / F40.10

6. / Herpes simplex / B00.9 / valACYclovir 1 g tablet tab

7. / Vitamin D deficiency / E55.9 / 25 OH VITAMIN D

8. / Irritable bowel syndrome with diarrhea / K58.0

9. / Gastroesophageal reflux disease without esophagitis / K21.9

10. / Abdominal cramping / R10.9 / dicyclomine 10 MG capsule

| 11. | Other acute gastritis without hemorrhage

K29.00

12. / Generalized anxiety disorder / F41.1 / ALPRAZolam (Xanax) 0.5 MG tab

citalopram (Celexa) 20 MG tab

Sxs much improved on citalopram

13. / Oropharyngeal dysphagia / R13.12 / REFERRAL / CONSULT TO GASTROENTEROLOGY

Health Maintenance Screening:

Diabetes screening: done
Cholesterol screening: done
Pelvic exam: deferred, she is up to date on pap and has no symptoms
Pap smear: up to date , due 2026
Screening mammogram: up to date
Colon cancern screening: up to date, due 10/2026
Bone Density test: n/a

Vaccines:

Pneumonia vaccine: PCV20 - declining
TdaP vaccine: 11/15/16
Flu vaccine: n/a, not currently the flu season
Hepatitis B vaccine: declining
Shingrix: n/a
COVID vaccines: Declining new COVID shot
RSV vaccine: n/a

?- See AVS below for management / plan.

- Return to clinic 1 year for complete physical exam. Return to clinic sooner as needed.
- Discussed / reviewed indications, risks, benefits, side effects, and proper use of med(s) given today. Questions / concerns re: medication(s) addressed.
- PDMP reviewed and consistent
- Patient expressed understanding and agreement with above treatment plan.

Make Me the Author Attestation: Preliminary History Recorded by Clinical Staff

Preliminary information is recorded by Clinical Staff.
Recorded information was reviewed for accuracy and edited by Leilani D Paras, MD, who also personally confirmed the chief complaint with patient and completed HPI.

Patient Instructions

Dear Ms.Franklin

Thank you for including me in your health care today.

Here are the diagnoses that we discussed today and what we are doing about it:

ICD-10-CM

1. / **Preventative health care** / **Z00.00**

2. / Generalized anxiety disorder / F41.1

3. / Mild intermittent asthma without complication / J45.20

4. / Migraine without aura and without status migrainosus, not intractable / G43.009

5. / Social phobia involving fear of public speaking / F40.10

6. / Herpes simplex / B00.9

7. / Vitamin D deficiency / E55.9

8. / Irritable bowel syndrome with diarrhea / K58.0

9. / Gastroesophageal reflux disease without esophagitis / K21.9

10. / Abdominal cramping / R10.9

11. / Other acute gastritis without hemorrhage / K29.00

12. / Generalized anxiety disorder / F41.1

13. / Oropharyngeal dysphagia / R13.12

Restart citalopram 20mg - 1/2 tablet daily for 1 wk then increase to 1 tablet daily thereafter. Please send a MYChart message in 1 month to let me know how you're doing.

Continue current medications

Please make an appointment with Dr. Selinger

We're checking labs and will contact you via MyChart

Please make an appointment for your Mirena IUD - removal and re-insertion of new one.

Return to clinic 1 year for complete physical exam, sooner as needed

Progress Notes

Vl Tran, MD - 08/14/2025 1:57 PM PDT

Formatting of this note might be different from the original.
This patient is unaccompanied in the exam room.

Subjective:

Yvonne is a 46 y.o. female who presents for:

Chief Complaint

Patient presents with

• / Contraception

IUD consult

HPI:

46-year-old female presents today for evaluation of IUD removal and reinsertion.
She does not check her string at home. Has not had a speculum or pelvic exam within the last year.
She had her Mirena IUD placed in 2017. She is due for replacement.
Denies complications with initial placement of IUD.
Currently have occasional breakthrough bleeding, but otherwise amenorrheic with use of Mirena IUD.
Would like to continue hormonal IUD for contraceptive management.

Problem List
Current Medications

Reviewed and updated this visit by provider:

Review of Systems
Constitutional: Negative for chills and fever.
Genitourinary: Negative for menstrual problem.

Objective:

Blood pressure 100/66, pulse **(!) 56**, temperature 97.8 °F (36.6 °C), temperature source Oral, resp. rate 16, height 5' 5" (1.651 m), weight 130 lb (59 kg).

Physical Exam

Constitutional:
Appearance: Normal appearance.
HENT:
Head: Normocephalic and atraumatic.
Cardiovascular:
Rate and Rhythm: Normal rate.
Pulmonary:
Effort: Pulmonary effort is normal.

Genitourinary:
General: Normal vulva.
Vagina: Normal.
Cervix: Normal.
Uterus: Normal.
Adnexa: Right adnexa normal and left adnexa normal.
Comments: **Iud string in place**
Neurological:

Mental Status: She is alert and oriented to person, place, and time.
Psychiatric:
Mood and Affect: Mood normal.
Behavior: Behavior normal.

Assessment and Plan:

1. Encounter for routine checking of intrauterine contraceptive device (IUD) (Primary)

IUD string in place
Precedure, risks, and benefits discussed regarding Mirena IUD removal and replacement
Follow-up was scheduled for procedure

Future Appointments

Provider / Department / Center

8/22/2025 8:00 AM / Tran, VI Thuy, MD / OPTUM-EFMC FAMILY MEDICINE / EASTSIDE

8/21/2026 8:00 AM / Paras, Leilani, MD / OPTUM-EFMC FAMILY MEDICINE / EASTSIDE

-- Discussed with Patient and made AVS available through MyChart with treatment recommendations, any medication information (including risk and benefits of antibiotics/medication if prescribed), strict return precautions given, and when to seek immediate medical attention.

-- The concerns and questions of the Patient were addressed. The Patient verbally demonstrated understanding of and agreement with the plan.

Make Me the Author Attestation: Preliminary History Recorded by Clinical Staff

Preliminary information is recorded by Clinical Staff.
Recorded information was reviewed for accuracy and edited by Vi Tran, MD, who also personally confirmed the chief complaint with patient and completed HPI.

E/M code was selected based on 20 minutes spent on the date of encounter reviewing pertinent history and previous diagnostics, performing medically appropriate examination and evaluation, ordering diagnostic tests and/or medications, counseling and education to patient/family/caregiver. This excludes separately reportable services.

For G2211, Patient chronically managed by me for ongoing care related to this patient's single, serious, or complex condition; I will follow/have followed the patient longitudinally for this condition

Progress Notes

Vl Tran, MD - 08/22/2025 8:06 AM PDT

Formatting of this note might be different from the original.
This patient is unaccompanied in the exam room.

Subjective:

Yvonne is a 46 y.o. female who presents for:

Chief Complaint

Patient presents with

• / IUD Removal

• / IUD Insertion

HPI:

46-year-old female presents today for scheduled IUD removal and insertion. Contraceptive consult completed 8/14/2025. Patient has no new concerns today. Consent signed by patient.
Problem List
Current Medications

Reviewed and updated this visit by provider:

Review of Systems
Constitutional: Negative.
Genitourinary: Negative.

Objective:

Blood pressure 102/64, pulse 68, temperature 98 °F (36.7 °C), temperature source Oral, resp. rate 16, height 5' 5.25" (1.657 m), weight 126 lb (57.2 kg).

Physical Exam

Constitutional:
Appearance: Normal appearance.
HENT:
Head: Normocephalic and atraumatic.
Cardiovascular:
Rate and Rhythm: Normal rate.
Pulmonary:
Effort: Pulmonary effort is normal.

Genitourinary:
General: Normal vulva.
Vagina: Normal.
Cervix: Normal.
Uterus: Normal.
Adnexa: Right adnexa normal and left adnexa normal.
Comments: **IUD string in place**
Neurological:

Mental Status: She is alert and oriented to person, place, and time.
Psychiatric:
Mood and Affect: Mood normal.
Behavior: Behavior normal.

Procedure: IUD removal and insertion
IUD type: Mirena

The patient was positioned in the lithotomy position.
The speculum was inserted to visualize the cervix. IUD string visible outside the cervical os.
Ring forceps were used to remove the IUD in its entirety.
The cervix was cleansed with an antiseptic solution.
A tenaculum was applied to the cervix for stabilization.
Uterine sounding was performed to measure the depth of the uterine cavity: 6cm.
The IUD was loaded into the insertion device according to the manufacturer's instructions.
The IUD was inserted through the cervical canal and placed at the fundus of the uterus.

The strings were trimmed to approximately 3 cm outside the cervical os.
The tenaculum and speculum were removed.

Assessment and Plan:

1. Encounter for IUD removal and reinsertion (Primary)

Patient advised on expected cramping and spotting.
Educated on signs of potential complications (e.g., severe pain, heavy bleeding, signs of infection) and instructed to contact the office if these occur.
Follow-up as needed

- INSERT INTRAUTERINE DEVICE
- levonorgestrel (Mirena) IUD 52 mg
- levonorgestrel (Mirena) 52 MG IUD; 1 Intra Uterine Device by intrauterine route -. Inserted in-clinic. Leave on medication list for interaction checking
- REMOVE INTRAUTERINE DEVICE

-- Discussed with Patient and made AVS available through MyChart with treatment recommendations, any medication information (including risk and benefits of antibiotics/medication if prescribed), strict return precautions given, and when to seek immediate medical attention.

-- The concerns and questions of the Patient were addressed. The Patient verbally demonstrated understanding of and agreement with the plan.

Make Me the Author Attestation: Preliminary History Recorded by Clinical Staff

Preliminary information is recorded by Clinical Staff.
Recorded information was reviewed for accuracy and edited by Vi Tran, MD, who also personally confirmed the chief complaint with patient and completed HPI.

Primary Care and Walk In Clinic Call Assist Center

Is patient a [Delegated (green banner) Medicare Advantage](https://optumcare.sharepoint.com/sites/TECL/SiteDirectory/CASPS/SitePages/CUF-Resources.aspx) or ACO Registry (pink banner) patient? No, please verify provider or department and refer to Care Management algorithm when routing/transferring call.

Reason for call: patient having heavy periods every 21 days lasting for about 7 days ever since her IUD placement.

Caller: Yvonne Franklin
Best number for call back: 360-201-2728 (home)

Call COLD transferred to Call Assist RN to await results/triage and routed TE to Call Assist RN Pool (P 10418).

Electronically signed by Sarah C, MA at 01/12/2026 11:19 AM PST

Telephone Encounter - Lillian D, RN - 01/12/2026 11:19 AM PST

Formatting of this note might be different from the original.
Lillian, RN BSN -- Call Assist RN/WIC RN

Provider: **Patient would like to talk with provider. Patient would like to know if this bleeding is normal?**
Menstrual cycle is every 21 days and last 7 days.
Use to have IUD for 8 years
Got a new IUD in August 2025
With last IUD had a little spotting and then no periods
Patient currently has levonorgestrel IUD
Starting to get low energy and concerned iron is low

Patient said body is acting different from the same hormonal IUD she had for 8 years

Route to RN pool with orders. Thank you!

Situation: IUD questions

Background:

Patient calling
Patient identified by name and date of birth
Phone number confirmed

Assessment:

Menstrual cycle is every 21 days and last 7 days.
Use to have IUD for 8 years
Got a new IUD in 2025

With last IUD had a little spotting and then no periods
Patient currently has levonorgestrel
Starting to get low energy and concerned iron is low
Patient is currently on cycle this day 3
Soaking tampons needing about 5 pads throughout the day
Has little stomach discomfort

Recommendation: Disposition: Message sent to provider
Patient to seek emergent care if Severe vaginal bleeding (e.g., soaking 2 pads or tampons per hour and present

2 or more hours; 1 menstrual cup every 2 hours)
Patient verbalized understanding and agrees to plan.

Protocol Used: Contraception - IUD Symptoms and Questions (Adult)
Disposition for Call (Nurse Override): Discuss with PCP and Callback by Nurse Today
Override Reason: Caller refused suggested disposition
Override Notes: patient would like to speak with provider
Protocol-Based Disposition: Go to Office Now

Positive Triage Question:
* Moderate vaginal bleeding (e.g., soaking 1 pad or tampon per hour and present > 6 hours; 1 menstrual cup every 6 hours)

Care Advice Discussed:
* The Hormonal IUD - Side Effects

- It is common for your menstrual periods to completely go away or become lighter and less frequent after placement of a hormone releasing IUD.
- Changes in Vaginal Bleeding: About 1 in 4 women will have bleeding or spotting between menstrual periods during the first 6 months. Most women notice that their menstrual periods become lighter after getting a hormonal IUD.
- Missed Menstrual Periods: About 2 out of 10 women stop having periods having this type of IUD for 1 year. The medical term for this is amenorrhea. When the IUD is removed, your menstrual periods will come back.
- Other Symptoms: Some women have mild breast tenderness, acne, and headache. This is because a small amount of the hormone from the IUD gets into the blood stream.

Negative Triage Questions:
* Shock suspected (e.g., cold/pale/clammy skin, too weak to stand, low BP, rapid pulse)
* Sounds like a life-threatening emergency to the triager
* Severe abdominal pain (e.g., excruciating) and present > 1 hour
* Severe vaginal bleeding (e.g., soaking 2 pads or tampons per hour and present 2 or more hours; 1 menstrual cup every 2 hours)
* Patient sounds very sick or weak to the triager

Reference *ClearTriage - Adult Telephone Protocols
, Office Version by David A. Thompson, MD, FACEP & Pediatric Telephone Protocols by Barton D. Schmitt.*

Telephone Encounter - Leilani Paras, MD - 01/14/2026 6:57 AM PST

Formatting of this note might be different from the original.
Please tell her that it is possible for women to have menses like she's having after an IUD, even though this is not what she experienced last time.

I do agree that low energy could be due to low iron, since she's having more menses now. Please recommend she return to clinic for eval - want to check her IUD strings, make sure they're in place and also do labs.

Please assist in scheduling her for OV - ok to fit her in if needed. Please let me know if questions. Thanks

Leilani Paras, MD - 01/14/2026 2:37 PM PST
Formatting of this note is different from the original.
Dear Ms.Franklin

Thank you for including me in your health care today.

Here are the diagnoses that we discussed today and what we are doing about it:
ICD-10-CM
1. Menometrorrhagia N92.1
2. Other fatigue R53.83
3. Vitamin D deficiency E55.9

We're checking labs and will contact you via MyChart message with results

Please schedule your pelvic ultrasound at:
Rayus Radiology
1310 116th Ave NE, Suite E
Bellevue, WA 98004
Scheduling 855-643-7226
Phone 425-637-9729

Please let me know if you do not hear back from me about 7-10 days after getting your imaging. I'll need to call them to get your results.
We'll discuss further management based on results.

No new prescriptions were ordered during this visit.

Additional orders placed in this encounter
Procedures
External US Pelvis Complete With Transvaginal
TSH REFLEX TO FT4
HEMOGRAM (CBC NO DIFF)

FERRITIN
VITAMIN B12 (LAB)
IRON PROFILE
VIT D (12 OH VITAMIN D)
ESTROGENS, TOTAL IA
FSH

Please contact us if you have any questions or issues about your care today, follow-up plan, or response to treatment.

Progress Notes

Leilani Paras, MD - 01/14/2026 2:02 PM PST

Formatting of this note might be different from the original.
Yvonne Franklin has provided verbal consent for the use of DAX during today's office visit. Three identifiers (Yvonne Franklin, 6/17/1979, 360-201-2728) have been used to identify the patient.

Subjective:

This patient is unaccompanied in the exam room.

Yvonne is a 46 y.o. female who presents for:

Chief Complaint

Patient presents with

• / Bleeding

*Patient stated been having issues with her IUD with lots of bleeding, every 21 days. *

History of Present Illness
46-year-old female here for IUD follow-up.

IUD Follow-up

- IUD inserted end of August 2025
- Menstrual cycles every 21 days, lasting 7 days, with heavy flow requiring tampons and pads changed multiple times daily
- Consistent for 5 months
- Did not have these issues with previous IUD

Fatigue

- Reports significant fatigue despite good sleep hygiene and no alcohol

- Suspects iron or vitamin D deficiency
- History of anemia and vitamin D deficiency
- Resumed vitamin D supplements yesterday
- Currently on day 5 of menstrual cycle
- No hot flashes or night sweats

Social History

- Alcohol: Abstinent
- Sleep: Good, no issues

GYNECOLOGICAL HISTORY

- Cycle Length: 21 days
- Duration: 7 days
- Frequency and Flow: Heavy, tampons and pads changed multiple times daily

7/18/2025

Assessment & Plan

Menometrorrhagia:

- Periods every 21 days for 7 days with heavy flow since IUD insertion in August 2025. Reports low energy and fatigue.
- Order labs: CBC, iron, ferritin, B12, TSH, reflex to free T4, vitamin D.
- Conduct ultrasound for IUD placement and uterine abnormalities.
- Consider low-dose OCP if results are normal.
- Discussed that these symptoms can occur with IUDs. Oftentimes, they resolve but may take 6-8 months.

Fatigue:

- Significant fatigue despite adequate sleep and life

style improvements.

- Order labs: iron, ferritin, B12, CBC, TSH, reflex to free T4.

Vitamin D deficiency:

- History of vitamin D deficiency, taking 5000 IU daily x 2 days
- Check vitamin D levels for further supplementation.
- Continue current vitamin D regimen until results available.

Follow-up
-Management per results
-Return to clinic if symptoms increase/change. Return precautions given
-Patient expressed understanding and agreement with above treatment plan.

Make Me the Author Attestation: Preliminary History Recorded by Clinical Staff

Preliminary information is recorded by Clinical Staff.
Recorded information was reviewed for accuracy and edited by Leilani D Paras, MD, who also personally confirmed the chief complaint with patient and completed HPI.

Voice recognition technology may have been employed in the creation of this record.

E/M code was selected based on 33 minutes spent on the date of encounter reviewing pertinent history and previous diagnostics, performing medically appropriate examination and evaluation, ordering diagnostic tests and/or medications, counseling and education to patient/family/caregiver. This is excludes activities performed by clinical staff.
For G2211, Patient chronically managed by me for ongoing care related to this patient's single, serious, or complex condition; I will follow/have followed the patient longitudinally for this condition

Patient Instructions

Dear Ms.Franklin

Thank you for including me in your health care today.

Here are the diagnoses that we discussed today and what we are doing about it:

ICD-10-CM

1. / **Menometrorrhagia** / **N92.1**

2. / Other fatigue / R53.83

3. / Vitamin D deficiency / E55.9

We're checking labs and will contact you via MyChart message with results

Please schedule your pelvic ultrasound at:

Rayus Radiology

1310 116th Ave NE, Suite E

Bellevue, WA 98004

Scheduling 855-643-7226

Phone 425-637-9729

Please let me know if you do not hear back from me about 7-10 days after getting your imaging. I'll need to call them to get your results.

We'll discuss further management based on results.

No new prescriptions were ordered during this visit.

Additional orders placed in this encounter

Procedures

• / External US Pelvis Complete With Transvaginal

• / TSH REFLEX TO FT4

• / HEMOGRAM (CBC NO DIFF)

• / FERRITIN

• / VITAMIN B12 (LAB)

• / IRON PROFILE

• / VIT D (12 OH VITAMIN D)

• / ESTROGENS, TOTAL IA

• / FSH

Please contact us if you have any questions or issues about your care today, follow-up plan, or response to treatment.

Leilani D Paras, MD

EVERETT CLINIC EASTSIDE

OPTUM-EFMC FAMILY MEDICINE

Dear Ms.Franklin

Thank you for including me in your health care today.

Here are the diagnoses that we discussed today and what we are doing about it:
ICD-10-CM
1. Upper back pain on right side M54.9
2. Pain aggravated by coughing and deep breathing R52
R05.9

Continue ibuprofen / tylenol as needed
Use the hydrocodone / APAP as needed for severe pain
Please make sure you are not getting more then 4000mg / day of tylenol
Please make sure to take these meds with food
We're checking xrays today and will contact you with results.
Please hold off on physical therapy appointment until after xrays are back.
Return to clinic if symptoms increase/change or persist despite this plan.

Prescriptions Signed In This Encounter
Medications
HYDROcodone-acetaminophen 5-325 MG tablet tab
Sig: Take 1 tablet by mouth every 6 hours as needed for pain. Max Daily Amount: 20 mg of opioid Max 4,000 mg day acetaminophen all sources.
Dispense: 20 tablet
Refill: 0

Additional orders placed in this encounter
Procedures

REFERRAL / CONSULT TO PHYSICAL THERAPY (EXTERNAL)
O2 Sat (Only chargable for acute issues)
XR Ribs Unilateral Right 2V
XR CHEST 2V

Please contact us if you have any questions or issues about your care today, follow-up plan, or response to treatment.

Progress Notes

Leilani Paras, MD - 02/25/2026 11:59 AM PST

Formatting of this note might be different from the original.
Yvonne Franklin has provided verbal consent for the use of DAX during today's office visit. Three identifiers (Yvonne Franklin, 6/17/1979, 360-201-2728) have been used to identify the patient.

Subjective:

This patient is unaccompanied in the exam room.

Yvonne is a 46 y.o. female who presents for:

Chief Complaint

Patient presents with

• / Back Pain

| | | *Started 2 weeks ago pian started to developed. *

History of Present Illness:

History of Present Illness
A 46-year-old female presents with right upper back pain following a traumatic event.

Right Upper Back Pain

- Three weeks ago, she choked on a supplement pill and her husband applied forceful pressure to her right upper back and rib area (back blows) to help her dislodge the food
- No immediate pain was noted.
- Two weeks ago, she developed dull, constant pain below the right scapula, making breathing difficult and interfering with daily activities.
- Pain is localized to the right side, rated 5/10 at baseline, increasing to 8-9/10 with activities like sneezing or dishwashing.
- Sneezing triggers sharp exacerbations; deep breathing, coughing, and certain movements worsen discomfort.
- No numbness, tingling, weakness, cold symptoms, fevers, or chills. No dyspnea, no palpitations, no chest pain.
- Skiing and running during her trip may have further irritated the area.
- Ibuprofen and Tylenol provide partial relief.
- Previously used hydrocodone for pain management.

Uses alprazolam as needed for anxiety

No visits with results within 1 Month(s) from this visit.

Latest known visit with results is:

Review of Systems
Pertinent items are noted in HPI/associated Symptoms and otherwise, all other systems negative.

Objective:

BP 98/62 (Arm: LEFT, Position: SITTING, Cuff Size: ADULT) | Pulse 68 | Temp 99.1 °F (37.3 °C) (Temporal) | Resp 18 | Ht 5' 4.8" (1.646 m) | Wt 127 lb 9.6 oz (57.9 kg) | LMP (LMP Unknown) | SpO2 97% Comment: 97% Sp02 | 70 BMP | BMI 21.36 kg/m²

Physical Exam

Vitals reviewed.
Constitutional:
General: She is not in acute distress.
Cardiovascular:
Rate and Rhythm: Normal rate and regular rhythm.
Heart sounds: Normal heart sounds.
Pulmonary:
Effort: Pulmonary effort is normal. No respiratory distress.

Breath sounds: Normal breath sounds. No stridor. No wheezing, rhonchi or rales.
Musculoskeletal:
Right shoulder: No swelling, effusion, tenderness **(but back pain is elicited with forward flexion and full extension of her R arm)**, bony tenderness or crepitus. Normal range of motion.
Left shoulder: Normal.
Cervical back: No swelling, edema, tenderness or bony tenderness.
Thoracic back: Spasms **(of bilat upper trapezius muscles)** and tenderness **(mild, of bilat upper trapezius muscles)** present. No swelling, edema, signs of trauma or bony tenderness.
Lumbar back: No swelling, e
dema or bony tenderness.

Right lower leg: No edema.
Left lower leg: No edema.
Skin:
General: Skin is warm.
Capillary Refill: Capillary refill takes less than 2 seconds.
Neurological:
General: No focal deficit present.
Mental Status: She is alert and oriented to person, place, and time.

Psychiatric:
Mood and Affect: Mood normal.
Behavior: Behavior normal.
Thought Content: Thought content normal.
Judgment: Judgment normal.

Assessment/Plan:

R05.9 / XR CHEST 2V

PULSE OXIMETRY REST-SNGL-BACK OFFICE

HYDROcodone-acetaminophen 5-325 MG tablet tab

Assessment & Plan

Right upper back pain:

- Constant dull pain below right scapula, worsened by sneezing, washing dishes, deep breathing, and full arm extension. No numbness, tingling, weakness, cold symptoms, fevers, or chills.
- Tenderness and spasm in upper trapezius muscle. Rhomboids normal and non-tender. No pain with palpation of thoracic spine, lumbar area, or right shoulder. Pain present only at full range of arm motion.
- Ordered chest x-ray and pulse oximetry to rule out fracture and assess lung function. Await x-ray results before initiating physical therapy. If x-ray is negative, pain likely due to trauma-related irritation.
- Prescribe hydrocodone with Tylenol for severe pain, not to exceed 4000 mg Tylenol per day. Continue ibuprofen as needed. Take all medications with food.
- Refer to physical therapy if x-ray is negative. Hold physical therapy if fracture is detected.
- Return to clinic or ER if symptoms worsen or persist.
- Discussed / reviewed indications, risks, benefits, side effects, and proper use of med(s) given today. Questions / concerns re: medication(s) addressed. She understands that the hydrocodone can cause sedation. She is to not drive or operate heavy machinery after taking it. She understands to not take with other sedating medications / substances, including EtOH and her alprazolam.
- PDMP reviewed and consistent
- Patient expressed understanding and agreement with above treatment plan.

Make Me the Author Attestation: Preliminary History Recorded by Clinical Staff

Preliminary information is recorded by Clinical Staff.
Recorded information was reviewed for accuracy and edited by Leilani D Paras, MD, who also personally confirmed the chief complaint with patient and completed HPI.

Voice recognition technology may have been employed in the creation of this record.

For G2211, Patient chronically managed by me for ongoing care related to this patient's single, serious, or complex condition; I will follow/have followed the patient longitudinally for this condition

Progress Notes

Leilani Paras, MD - 04/24/2026 7:29 AM PDT

Formatting of this note might be different from the original.

Yvonne Franklin has provided verbal consent for the use of DAX during today's office visit. Three identifiers (Yvonne Franklin, 6/17/1979, 360-201-2728) have been used to identify the patient.

Modified evaluation performed based on CDC protocols for COVID19.

The pros and cons of a video visit for providing this care were reviewed with Yvonne Franklin and their verbal consent has been given to deliver this visit.

This visit was conducted real time via synchronous interactive video & audio conferencing technology utilizing a HIPAA compliant platform. Patient is located in their home in the state of Washington. Leilani D Paras, MD is located in the EFMC FAMILY MEDICINE office, and is licensed in the state of Washington.

Discussed with patient/parent: You have chosen to receive care through the use of telemedicine.
Telemedicine enables health care providers at different locations to provide safe, effective, and convenient care through the use of technology.
As with any health care service, there are risks associated with the use of telemedicine, including equipment failure, poor image resolution, and information security issues.
You also understand that I cannot physically examine you and that you may need to come to clinic to complete the assessment.

I have discussed the benefits of MyChart. Patient is already signed up for MyChart.

Patient Verifier : Yvonne Franklin, 6/17/1979

Patient is accompanied by her self in the video visit.

Do you consent to the use of telemedicine in your medical care today? Yes

Patient/parent verbally understands the risks and benefits of telemedicine as explained.
All questions regarding telemedicine answered.
Preferred phone number to contact patient is :360-201-2728

Is it okay to leave a detailed voicemail on this number? Yes

Subjective:

Yvonne Franklin is a 46 y.o. female She

Chief Complaint

Patient presents with

• / Follow Up

*Back pain *

HPI:

1. Follow up on back pain
History of Present Illness
The patient is a 46-year-old female presenting for follow-up regarding persistent right upper back pain.

Right Upper Back Pain

- She has experienced constant right upper back pain for two months, which has not improved with physical therapy or prescribed exercises.
- The pain worsens with movement, deep breathing, and sneezing.
- Her husband has noticed that the affected area feels softer than the opposite side, raising concern for inflammation.
- She manages the pain with ibuprofen and Tylenol, taking three ibuprofen and two Tylenol up to three times daily, spaced 4 to 6 hours apart.
- Pain intensity is rated 6–8/10 before medication, decreasing to 1/10 after dosing.
- She is concerned about gastrointestinal effects from frequent medication use and takes them with food and water.
- Hydrocodone was discontinued due to side effects.
- She has not tried muscle relaxants and is considering this option.
- Review of films done on 2/26/26 showed:
- Xray right ribs: Visualized ribs are intact. No displaced fracture.
- Chest x-ray:

-Healed left lateral ninth rib fracture is present.
-Otherwise normal chest.
-No pneumothorax.

Very Frequent Periods

- She plans a separate appointment to address very frequent periods despite having an IUD.
- She wishes to discuss birth control options.

GYNECOLOGICAL HISTORY:

- Very frequent periods

Problem list, medical/surgical history, medications, allergies, immunizations, social and family history reviewed and appropriately updated in Epic.

Limited Exam via patient's / Parent's video

Physical Exam

Constitutional:
General: She is not in acute distress.
Pulmonary:
Effort: Pulmonary effort is normal. No respiratory distress.
Neurological:
General: No focal deficit present.
Mental Status: She is alert and oriented to person, place, and time.
Psychiatric:

Mood and Affect: Mood normal.
Behavior: Behavior normal.
Thought Content: Thought content normal.
Judgment: Judgment normal.

Assessment and Plan:

ICD-10-CM

1. / **Upper back pain on right side** / **M54.9** / **REFERRAL / CONSULT TO PHYSICAL MEDICINE REHAB EXTERNAL ONLY**

cyclobenzaprine (Flexeril) 10 MG tab

Assessment & Plan

Upper back pain:

- Musculoskeletal pain persists despite physical therapy and analgesics
- Prior x-rays and chest x-ray show no acute fracture; healed left ninth rib fracture is unrelated
- Discussed musculoskeletal etiology, medication side effects, and physical medicine and rehabilitation
- Reviewed sedation risk with cyclobenzaprine and importance of taking medications with food
- No new imaging ordered; previous imaging reviewed
- Refer to Overlake Physical Medicine and Rehabilitation
- Prescribe cyclobenzaprine 10 mg: take 0.5 to 1 tablet up to three times daily as needed
- Continue ibuprofen and acetaminophen as needed with food
- Instruct to avoid driving or operating heavy machinery while using cyclobenzaprine
- Make appointment with Overlake PM&R.
- She will make a separate appointment to address very frequent periods despite having an IUD.
- Return to clinic in the meantime if symptoms increase/change
- Discussed / reviewed indications, risks, benefits, side effects, and proper use of med(s) given today. Questions / concerns re: medication(s) addressed.

- Patient expressed understanding and agreement with above treatment plan.

Make Me the Author Attestation: Preliminary History Recorded by Clinical Staff

Preliminary information is recorded by Clinical Staff.
Recorded information was reviewed for accuracy and e
dited by Leilani D Paras, MD, who also personally confirmed the chief complaint with patient and completed HPI.

For G2211, Patient chronically managed by me for ongoing care related to this patient's single, serious, or complex condition; I will follow/have followed the patient longitudinally for this condition

Formatting of this note is different from the original.
Dear Ms.Franklin

Thank you for including me in your health care today.

Here are the diagnoses that we discussed today and what we are doing about it:
ICD-10-CM
1. Menorrhagia with regular cycle N92.0

Please make an appointment for pelvic ultrasound at:
Rayus Radiology
1310 116th Ave NE, Suite E
Bellevue, WA 98004
Scheduling 855-643-7226
Phone 425-637-9729

Please start the new loestrin 1/20 Fe
If possible, please wait to start these until after your ultrasound is done.
Please let me know if you have issues with the birth control pill after 3 months on it.
Return to clinic / call in the meantime if symptoms increase/change

No new prescriptions were ordered during this visit.

No orders of the defined types were placed in this encounter.

Please contact us if you have any questions or issues about your care today, follow-up plan, or response to treatment.

Progress Notes

Leilani Paras, MD - 05/13/2026 6:49 AM PDT

Formatting of this note might be different from the original.

Yvonne Franklin has provided verbal consent for the use of DAX during today's office visit. Three identifiers (Yvonne Franklin, 6/17/1979, 360-201-2728) have been used to identify the patient.

Modified evaluation performed based on CDC protocols for COVID19.

The pros and cons of a video visit for providing this care were reviewed with Yvonne Franklin and their verbal consent has been given to deliver this visit.

This visit was conducted real time via synchronous interactive video & audio conferencing technology utilizing a HIPAA compliant platform. Patient is located in their home in the state of Washington. Leilani D Paras, MD is located remotely in home office, and is licensed in the state of Washington.

Discussed with patient/parent: You have chosen to receive care through the use of telemedicine.
Telemedicine enables health care providers at different locations to provide safe, effective, and convenient care through the use of technology.
As with any health care service, there are risks associated with the use of telemedicine, including equipment failure, poor image resolution, and information security issues.
You also understand that I cannot physically examine you and that you may need to come to clinic to complete the assessment.

I have discussed the benefits of MyChart. Patient is already signed up for MyChart.

Patient Verifier : Yvonne Franklin, 6/17/1979

Patient is accompanied by her self in the video visit.

Do you consent to the use of telemedicine in your medical care today? Yes

Patient/parent verbally understands the risks and benefits of telemedicine as explained.
All questions regarding telemedicine answered.
Preferred phone number to contact patient is :360-201-2728

Is it okay to leave a detailed voicemail on this number? Yes

Subjective:

Patient presents with

• / Other

Video Visit. Follow-up on menstrual cycle.

HPI:

History of Present Illness
The patient is a 46-year-old female who is seen via video visit for follow-up of menorrhagia and recent neck pain.

Menorrhagia

- Since August 2025, menstrual cycles occur every 3 weeks, with 1 week of heavy bleeding followed by 1 week of brown discharge, persisting for 9 months.

- Fatigue is attributed to prolonged bleeding and frequent menstrual product use.
- The most recent period began last Thursday (5/7/26) and is ongoing, with an expected 5 days of brown discharge to follow.
- Brown discharge at the end of the cycle is a new symptom.
- An intrauterine device was placed in August 2025; she is considering removal in September 2026 if no improvement in symptoms
- She does not use iron supplements but takes vitamin D and B12.
- She previously tolerated birth control pills.
- There is no personal or family history of blood clotting disorders.
- She is interested in further hormonal testing, including holistic options, but has concerns about some hormone therapies.

-She was previously seen for this on 1/14/26
-Bloodwork at the time was negative except for FSH elevated at 30.2
-Pelvic ultrasound was ordered - she has not yet scheduled it

Right sided thoracic back pain since 2/14/26

- Evaluated by physical medicine and rehabilitation 5/11/26
- Cervical etiology is suspected based on x-rays from 05/11/2026.
- Gabapentin and meloxicam were prescribed and are pending pharmacy fulfillment.

GYNECOLOGICAL HISTORY:

- Last menstrual period: 5/7/26
- Cycle length: 3 weeks
- Duration: 10-14 days
- Heavy bleeding for 1 week, followed by 1 week of brown discharge. Then no bleeding x 1 week and then she restarts cycle with heavy bleeding

She does not use tobacco.

FAMILY HISTORY
She does not have a family history of blood clotting disorders.

Problem list, medical/surgical history, medications, allergies, immunizations, social and family h
istory reviewed and appropriately updated in Epic.

Limited Exam via patient's / Parent's video

Physical Exam

Constitutional:
General: She is not in acute distress.
Pulmonary:
Effort: Pulmonary effort is normal. No respiratory distress.
Neurological:
General: No focal deficit present.
Mental Status: She is alert and oriented to person, place, and time.
Psychiatric:

Mood and Affect: Mood normal.
Behavior: Behavior normal.
Thought Content: Thought content normal.
Judgment: Judgment normal.

Assessment and Plan:

ICD-10-CM

1. / **Menorrhagia with regular cycle** / **N92.0** / **Norethin Ace-Eth Estradiol-FE (LOESTRIN FE) 1-20 MG-MCG tablet (28 tab pack)**

2. / Chronic right-sided thoracic back pain / M54.6 / Seeing PM+R. Thought to be cervical in origin.

G89.29

since 2/14/26.

?

Assessment & Plan

Menorrhagia

- Periods every 3 weeks with heavy bleeding and brown discharge
- Labs reviewed: thyroid, CBC, ferritin, iron, B12, vitamin D, estrogen, FSH
- Discussed risks and benefits of birth control pills
- Provided information about low-dose estrogen and possible side effects
- Pelvic ultrasound ordered to assess uterine structure before starting birth control pills

- Prescribe Loestrin 1/20 FE:
- Start after ultrasound or sooner if desired
- Start with taking active pills x 3wks, 1 week off and then restart
- If doing well on OCP with improvement in symptoms, she can space out menses to q3 mos
- Provide 84 tablets with three refills for one year

Follow-up:

- Follow up via MyChart message to review pelvic ultrasound report
- Return to clinic / call in the meantime if symptoms increase/change
- Discuss

ed / reviewed indications, risks, benefits, side effects, and proper use of med(s) given today. Questions / concerns re: medication(s) addressed.

- Patient expressed understanding and agreement with above treatment plan.

Make Me the Author Attestation: Preliminary History Recorded by Clinical Staff

Preliminary information is recorded by Clinical Staff.
Recorded information was reviewed for accuracy and edited by Leilani D Paras, MD, who also personally confirmed the chief complaint with patient and completed HPI.

E/M code was selected based on 30 minutes spent on the date of encounter reviewing pertinent history and previous diagnostics, performing medically appropriate examination and evaluation, ordering diagnostic tests and/or medications, counseling and education to patient/family/caregiver. This excludes activities performed by clinical staff.

For G2211, Patient chronically managed by me for ongoing care related to this patient's single, serious, or complex condition; I will follow/have followed the patient longitudinally for this condition

Miscellaneous Notes

Telephone Encounter - Rebecca B, MA - 05/13/2026 6:53 AM PDT

Formatting of this note might be different from the original.
Patient has a Video Visit today at 7:00 am with Dr.Paras. I called patient to do the pre-visit preparation. No answer. I left a message for patient to go ahead and check in for her VV and also that I will call patient back in few minutes. Clinic number provided.

Ordered Prescriptions

Prescription / Sig / Dispense Quantity / Refills / Last Filled / Start Date / End Date

Prescription propranolol (Inderal) 10 MG tab
Sig Take 1 tablet by mouth daily.
Dispense Quantity 100 tablet
Refills 3
Start Date 07/10/2026

Prescription albuterol HFA (Proventil, Ventolin, ProAir) 90 MCG/ACT inhaler
Sig Take 2 puffs by inhalation every 4 to 6 hours as needed for wheezing or shortness of breath. Not to exceed 10 puffs/24 hours.
Dispense Quantity 18 g
Refills 2
Start Date 07/10/2026

Prescription Lidocaine 7.5 % cream
Sig Apply 1 gram topically 2 times daily.
Dispense Quantity 30 g
Refills 3
Start Date 07/10/2026
End Date 07/13/2026

Prescription ALPRAZolam (Xanax) 0.25 MG tab
Sig Take 1 tablet by mouth at bedtime as needed.
Dispense Quantity 30 tablet
Start Date 07/10/2026
End Date 09/08/2026

Prescription citalopram (Celexa) 20 MG tab
Sig Take 1 tablet by mouth daily.
Dispense Quantity 100 tablet
Refills 3
Start Date 07/10/2026
End Date 07/14/2026

Progress Notes

Dulce S, MA - 07/10/2026 7:22 AM PDT

Formatting of this note might be different from the original.

Subjective:

Chief Complaint

Patient presents with

• / Imaging Test

Patient is here following up on imaging from MR THORACIC SPINE WITHOUT CONTRAST 7/9/2026.

History of Present Illness
The patient is a 47-year-old female presenting for follow-up after recent MRI and ongoing evaluation of back pain, possible malignancy, and other chronic health concerns.

Thoracic Spine Fractures and Back Pain

- Recent MRI revealed multiple thoracic spine fractures.
- Patient reports a skiing fall in 02/2026, landing on her back, but fracture locations suggest a non-traumatic etiology.
- She experiences persistent localized pain, more pronounced on one side, and neck stiffness.
- Over-the-counter 5% lidocaine cream was ineffective.
- Previously tried Percocet but could not tolerate it.
- Has used ibuprofen 600 mg twice daily for 5 months, but is concerned about worsening her chronic stomach issues.
- Requests referral to a thoracic spine specialist (Dr. Ash Patel at Proliance Orthopedics and Sports Medicine) and UW oncology.
- CT chest AP scan is scheduled Monday 9am.

Anxiety and Sleep Disturbances

- Reports significant anxiety and sleep disturbances due to diagnostic uncertainty.
- Previously used Xanax for anxiety but no longer has access and requests a refill.
- Sleep is impaired by pain and anxiety.

Additional Information

- Appetite is generally good, but she notes decreased interest in eating due to stress.
- Currently takes omega-3, vitamin C, and vitamin D supplements.
- Blood work in 01/2026 was normal.

Problem List
Current Medications

ROS:

Negative unless otherwise stated in HPI.

Objective:

Vital Signs:

Blood pressure 116/78, pulse 84, temperature 98.9 °F (37.2 °C), temperature source Temporal, resp. rate 16, height 5' 4.8" (1.646 m), weight 125 lb 9.6 oz (57 kg).

Physical Exam

Constitutional:
Appearance: Normal appearance.
HENT:
Head: Normocephalic and atraumatic.
Eyes:
Conjunctiva/sclera: Conjunctivae normal.
Cardiovascular:
Rate and Rhythm: Normal rate and regular rhythm.

Pulmonary:
Effort: Pulmonary effort is normal.
Neurological:
Mental Status: She is alert.

?

Assessment and Plan:

Assessment & Plan

Pathological fracture of vertebra, unspecified pathological cause, initial encounter

- Discussed risks and possible causes, including metastatic cancer
- Reviewed signs of spinal cord compression and need for urgent care
- Advised to avoid high-impact activities
- CT scan of chest, abdomen, and pelvis pending
- Refer to medical oncology for urgent evaluation
- Refer to thoracic spine specialist for further assessment

Orders:

• REFERRAL / CONSULT TO ORTHOPEDICS (NOT SPINE SURGERY) EXTERNAL ONLY
• REFERRAL / CONSULT TO ONCOLOGY

?

Lytic bone lesions on xray

- Multiple vertebral fractures present, not typical for age or trauma history
- Discussed signs and symptoms of spinal cord compression
- Reviewed importance of urgent evaluation and follow-up
- Refer to medical oncology
- Refer to thoracic spine specialist

Orders:

• Lidocaine 7.5 % cream; Apply 1 gram topically 2 times daily.
• REFERRAL / CONSULT TO ORTHOPEDICS (NOT SPINE SURGERY) EXTERNAL ONLY

• REFERRAL / CONSULT TO ONCOLOGY

?

Generalized anxiety disorder

- Patient experiencing significant anxiety and difficulty sleeping

- Discussed risks and benefits of anxiety medications

- Reviewed importance of support system and communication with family

- Prescribe citalopram for ongoing anxiety

- Prescribe Xanax for acute anxiety episodes, use sparingly

Orders:

• citalopram (Celexa) 20 MG tab; Take 1 tablet by mouth daily.

• ALPRAZolam (Xanax) 0.25 MG tab; Take 1 tablet by mouth at bedtime as needed.

?

Mild intermittent asthma without complication

Refilled
Orders:

• albutero

l HFA (Proventil, Ventolin, ProAir) 90 MCG/ACT inhaler; Take 2 puffs by inhalation every 4 to 6 hours as needed for wheezing or shortness of breath. Not to exceed 10 puffs/24 hours.
?

Migraine without aura and without status migrainosus, not intractable

Refilled
Orders:

• propranolol (Inderal) 10 MG tab; Take 1 tablet by mouth daily.

?

Follow as scheduled with PCP

Make Me the Author Attestation: Preliminary History Recorded by Clinical Staff

Preliminary information is recorded by Clinical Staff.
Recorded information was reviewed for accuracy and edited by Maryan Gelle, MD, who also personally confirmed the chief complaint with patient and completed HPI.

Yvonne Franklin has provided verbal consent for the use of DAX during today's office visit. Three identifiers (Yvonne Franklin, 6/17/1979, 360-201-2728) have been used to identify the patient.

Patient Active Problem List

Diagnosis

• / Abdominal pain

• / Herpes simplex

• / Internal hemorrhoids

• / Migraine headache

• / Premature ventricular contractions

• / Esophageal reflux

• / Social phobia involving fear of public speaking

• / Supraventricular bigeminy

• / Tension-type headache

• / Vitamin D deficiency

• / Generalized anxiety disorder

• / Mild intermittent asthma without complication

• / Allergic rhinitis due to pollen

• / Muscle spasm of back

• / Left breast mass

• / Irritable bowel syndrome with diarrhea

• / Eosinophilic esophagitis

• / Gilbert syndrome

• / DDD (degenerative disc disease), cervical

• / Menorrhagia with regular cycle

Current Outpatient Medications

Medication / Sig / Dispense / Refill

• / albuterol HFA (Proventil, Ventolin, ProAir) 90 MCG/ACT inhaler / Take 2 puffs by inhalation every 4 to 6 hours as needed for wheezing or shortness of breath. Not to exceed 10 puffs/24 hours. / 18 g / 2

• / propranolol (Inderal) 10 MG tab / Take 1 tablet by mouth daily. / 100 tablet / 3

• / citalopram (Celexa) 20 MG tab / Take 1 tablet by mouth daily. / 100 tablet / 3

• / ALPRAZolam (Xanax) 0.25 MG tab / Take 1 tablet by mouth at bedtime as needed. / 30 tablet / 0

• / Lidocaine 7.5 % cream / Apply 1 gram topically 2 times daily. / 30 g / 3

• / Norethin Ace-Eth Estradiol-FE (LOESTRIN FE) 1-20 MG-MCG tablet (28 tab pack) / Take 1 tablet by mouth daily. / 84 tablet / 3

• / cyclobenzaprine (Flexeril) 10 MG tab / Take 0.5-1 tablets by mouth 3 times daily as needed for muscle spasms. / 30 tablet / 0

• / levonorgestrel (Mirena) 52 MG IUD / 1 Intra Uterine Device by intrauterine route -. Inserted in-clinic. Leave on medication list for interaction checking

• / ALPRAZolam (Xanax) 0.5 MG tab / Take 0.5-1 tablets by mouth 2 times daily as needed for anxiety (for panic attacks). May repeat in 6-8 hours if needed. May cause sedation / 15 tablet / 0

• / valACYclovir 1 g tablet tab / 2 tablets Q12 hrs x 1 day as needed herpes outbreak / 8 tablet / 3

• / citalopram (Celexa) 20 MG tab / Take 1 tablet by mouth daily. / 100 tablet / 1

• / SUMAtriptan (Imitrex) 100 MG tablet / TAKE 1 TABLET BY MOUTH AT ONSET OF HEADACHE, MAY TAKE 1 AND REPEAT IN 2 HOURS IF HEADACHE REMAINS, MAX 2 TABLETS PER 24 HOURS / 9 tablet / 5

• / Omeprazole 20 MG delayed release capsule / Take 1 capsule by mouth daily 30 minutes prior to a meal. / 90 capsule / 3

• / Spacer/Aero-Holding Chambers (PRO COMFORT SPACER ADULT) miscellaneous / Use 1 each as needed. / 1 each / 0

• / dicyclomine 10 MG capsule / Take 1 capsule by mouth 4 times daily as needed (colonic spasms). / 30 capsule / 3

No current facility-administered medications for this visit.

Miscellaneous Notes

Telephone Encounter - Chloe S, CMA - 07/13/2026 12:30 PM PDT

Formatting of this note might be different from the original.

Primary Care and Walk In Clinic Call Assist Center

Is patient a [Delegated (green banner) Medicare Advantage](https://optumcare.sharepoint.com/sites/TECL/SiteDirectory/CASPS/SitePages/CUF-Resources.aspx) or ACO Registry (pink banner) patient? No, please verify provider or department and refer to Care Management algorithm when routing/transferring call.

Provider instructions -- None

Reason for call: Pt is calling in regarding recent appointment from 07.10.26. States the MR results were reviewed and she was referred for a CT. States she completed the CT and the radiologist advised to have a diagnostic mammogram and US and pt is requesting provider to put in an urgent order for these. Would like this to be completed at Fred Hutch at UW.

Caller: Yvonne Franklin
Best number for call back: 360-201-2728

Routing TE to site MA pool to review and follow up as needed.

Telephone Encounter - Leilani Paras, MD - 07/13/2026 2:29 PM PDT

Formatting of this note might be different from the original.
High priority since previous imaging showed pathologic fracture with findings highly suspicious for metastases.

Can we please get a copy of that CT scan? I believe it was probably ordered at Rayus - probably Kirkland because that's where her other imaging has been done.

It sounds like radiologist recommended diagnostic mammogram with ultrasound - just need diagnosis for the imaging (ie, did they see something in her breast tissue that they're wanting diagnostic mammogram for? And need to know if they recommended bilat breasts or just one side.

I guess the easiest thing would be to call Rayus for report? Or ask patient?
Once I get diagnosis, I will order and route diagnostic mammogram and ultrasound orders. Thanks

Leilani D Paras, MD

Per Rayus portal, MRI findings are as follows:

EXAM: MR THORACIC SPINE WITHOUT CONTRAST

HISTORY: 47-year-old female with back pain since mid February after injury in the left.

COMPARISON: None.

TECHNIQUE: Sagittal T1, T2, STIR and axial T2 sequences.

FINDINGS:

There is diffusely heterogeneous T1 hypointense and multifocal T2 hyperintense hypointense marrow signal. This includes 2.3 x 2.3 cm expansile lesion in T5 with smooth cortical remodeling and fluid-fluid levels suggestive of aneurysmal bone cystlike lesion. Similar lesions seen in T1, T8, T9, T10.

There is a 1.2 x 1.1 cm expansile T1 isointense, T2 hyperintense lesion in the posterior elements of T10 with endosteal scalloping, 7:17.

There compression deformities of T1, T4, T5, and T8 vertebral bodies.

No disc herniation or spinal canal narrowing is seen. There is mild bilateral neural foraminal narrowing at T8-9 secondary to bony expansion.

Mild facet arthropathy seen in the lower lumbar spine.

In the visualized posterior right liver there is a 1.8 cm ovoid T2 hyperintense mass, 7:33. Millimetric T2 hyperintense focus in the posterior left kidney is too small to characterize, statistically likely cyst.

Normal spinal cord morphology and signal is seen.

IMPRESSION:

*Diffusely heterogeneo
us T1 hypointense and multifocal T2 hyperintense marrow signal including 2.3 x 2.3 cm expansile aneurysmal bone cyst like lesion in T5 vertebral body and similar lesions in T1, T8, T9, T10 and vertebral bodies, as well as 1.2 x 1.1 cm expansile T1 isointense, T2 hyperintense lesion in the posterior elements of T10. Additionally there is a 1.8 cm ovoid T2 hyperintense mass in the visualized posterior right liver lobe. While multiple aneurysmal bone cysts is a small possibility, the appearance is highly concerning for metastases from unknown primary. Recommend CT chest, abdomen and pelvis with contrast or PET/CT for further evaluation.*

Compression deformities of T1, T4, T5 and T8 vertebral bodies which may be pathologic.

Mild bilateral neural foraminal narrowing at T8-9 secondary to bony expansion.

Thanks for the MRI results.
As part of these MRI results, they *CT chest, abdomen and pelvis with contrast or PET/CT for further evaluation.*

I believe she had the CT this morning, which is why she was calling for diagnostic mammogram and ultrasound.

Can we please get those CT results from this AM. I have an appointment with her tomorrow to discuss results. (I don't believe we ordered the CT. I think the physiatrist at Overlake may have?)
Or we can perhaps get in touch with Rayus to see wht they recommended diagnostic mammogram and ultrasound.
Thanks!

Telephone Encounter - Andrey A, RN - 07/13/2026 5:43 PM PDT

Formatting of this note might be different from the original.

Leilani D Paras, MD

It looks like the results came in and are under the imaging tab.

Routing message to clinician. Please review MyChart Message and give recommendation. Route back to RN pool if needed.

Electronically signed by Andrey A, RN at 07/13/2026 5:44 PM PDT

Telephone Encounter - Leilani Paras, MD - 07/13/2026 11:30 PM PDT

Formatting of this note might be different from the original.
Routing to Ana Huston, ARNP: patient has 8AM appointment with you on Tues

She is currently undergoing workup for lytic bone lesions that are suspicious for mets with unknown primary.

Wanted to give you the heads up that she is requesting to have endometrial biopsy at the time of her IUD removal. I told her that you may not have time and that you may not do endometrial biopsies, but I'd let you know in case you wanted to try to do both the IUD removal and endometrial biopsy at her appointment with you on Tues.

Routing to RN pool:

Can you please make sure Ana Huston, ARNP is aware of patient's request? I will likely be busy with clinic and may not have the opportunity to see her before patient's appointment at 8AM

Electronically signed by Leilani Paras, MD at 07/13/2026 11:34 PM PDT

Telephone Encounter - Holly C, RN - 07/14/2026 4:36 AM PDT

Formatting of this note might be different from the original.
Used secure interoffice messaging to request Ana Huston ARNP review this message prior to appointment.

Onsite nurse will also try to connect with her for a warm handoff of this information

Electronically signed by Holly C, RN at 07/14/2026 4:37 AM PDT

Telephone Encounter - Nicole A, RN - 07/14/2026 7:57 AM PDT

Formatting of this note might be different from the original.
Ana Huston, ARNP, currently seeing other patients

Note left on clinician's desk to review this TE

Electronically signed by Nicole A, RN at 07/14/2026 7:58 AM PDT

Spoke with Ana Huston, ARNP in-clinic

Per clinician, she does not perform endometrial biopsies. States that she will speak with Tam, lead MA, to attempt to arrange this for patient with another clinician

Electronically signed by Nicole A, RN at 07/14/2026 8:36 AM PDT

Telephone Encounter - Nicole A, RN - 07/14/2026 10:10 AM PDT

Formatting of this note might be different from the original.
Per visit note today:

*- She inquired about the possibility of having an endometrial biopsy performed at the same time as the IUD removal.

- After discussion with Dr. Egnal and Dr. Paras, the plan is to proceed with IUD removal today and defer the biopsy until after a pelvic ultrasound is completed.
- The patient has an appointment with her primary care provider in the next couple of hours and intends to keep that appointment.*

Closing this TE

Electronically signed by Nicole A, RN at 07/14/2026 10:10 AM PDT

Telephone Encounter - Elena M, RN - 07/22/2026 8:10 AM PDT

Formatting of this note might be different from the original.
See MyChart message, per Ana's notes on 7/14/26, IUD was removed without issue. But in PET-MR scan it does not IUD in place.

Progress Notes

Leilani Paras, MD - 07/14/2026 10:54 AM PDT

Formatting of this note might be different from the original.
Yvonne Franklin has provided verbal consent for the use of DAX during today's office visit. Three identifiers (Yvonne Franklin, 6/17/1979, 360-201-2728) have been used to identify the patient.

Subjective:

This patient is accompanied in the exam room by her spouse, Mark.

Yvonne is a 47 y.o. female who presents for:

Chief Complaint

Patient presents with

• / Results

Discuss CT scan 07/13/2026

History of Present Illness:

Yvonne is here for follow-up on imaging

Briefly, 7/1/2026 MRI thoracic spine (done for thoracic back pain) showed:

- Bone cyst like lesions on multiple vertebral body levels with appearance highly concerning for metastases from unknown primary
- Ovoid hyperintense mass in posterior right liver lobe
- Compression deformities at multiple thoracic vertebral bodies, noted to be possibly pathologic
- Recommended CT chest abdomen and pelvis with contrast or PET/CT for further evaluation

7/13/2026 CT abdomen/pelvis with contrast:
Diffuse lytic bone lesions throughout the spine and pelvis without CT evidence of primary malignancy in the abdomen or pelvis. Small bilateral ovarian cysts would be better characterized on transvaginal ultrasound.

7/13/2026 CT chest with contrast:
* Multiple osseous lytic lesions, as described, concerning for a neoplastic process.
* Fracture of the left 11th rib.
* A few scattered nodules, measuring up to 4 mm. In the context of a potential primary malignancy, a follow-up CT of the chest in 3 months is advised.

They recommended diagnostic mammogram and breast ultrasound
Ordered 7/13/26 STAT

Screening:

- last pap 5/26/21 -NILM, HPV neg (due 2026)
- last mammogram and ultrasound 4/10/25 - negative (Evergreen)
- last colonoscopy 10/18/21 - cleared x 5 yrs (Dr. Selinger) - due 10/2026

Complete physical exam scheduled for 9/2026

The patient is scheduled for evaluation at the oncology undiagnosed clinic at Fred Hutch. She is trying to get an appointment wiith neurosurgery at Fred Hutch. She expresses significant anxiety regarding diagnostic uncertainty and is actively coordinating her care.

Pain management.

- She uses NSAIDs, lidocaine, ibuprofen, and Tylenol for pain, but reports significant discomfort and seeks additional relief.
- Given prescription for topical lidocaine 10% patches by another provider. Patient reports that her pharmacy cannot get the 10% lidocaine patch.
- We discussed other options for pain, as her bone pain is significant

Problem List

Current Medications

Reviewed and updated this visit by provider:
Allergies | Meds | Problems |

Review of Systems
Pertinent items are noted in HPI/associated Symptoms and otherwise, all other systems negative.

Objective:

BP 120/78 | Pulse 82 | Temp 99 °F (37.2 °C) (Temporal) | Resp 16 | Ht 5' 4.5" (1.638 m) | Wt 125 lb (56.7 kg) | LMP 06/23/2026 | BMI 21.12 kg/m²

Physical Exam

Vitals reviewed.
Constitutional:
General: She is not in acute distress.
Eyes:
Conjunctiva/sclera: Conjunctivae normal.
Neck:
Thyroid: No thyroid mass, thyromegaly or thyroid tenderness.
Cardiovascular:

Rate and Rhythm: Normal rate and regular rhythm.
Heart sounds: Normal heart sounds.
Pulmonary:
Effort: Pulmonary effort is normal.
Breath sounds: Normal breath sounds. No stridor. No wheezing, rhonchi or rales.
Chest:
Comments: **+TTP 11th rib**
Lymphadenopathy:

Cervical: No cervical adenopathy.
Upper Body:
Right upper body: No supraclavicular adenopathy.
Left upper body: No supraclavicular adenopathy.
Skin:
General: Skin is warm.
Capillary Refill: Capillary refill takes less than 2 seconds.
Neurological:

General: No focal deficit present.
Mental Status: She is alert and oriented to person, place, and time.
Psychiatric
:
Mood and Affect: Mood normal. Affect is tearful **(sometimes tearful when discussing her results)**.
Speech: Speech normal.
Behavior: Behavior normal. Behavior is cooperative.

3. / Pathological fracture of vertebra, unspecified pathological cause, initial encounter / M84.48XA / US PELVIS COMPLETE WITH TRANSVAGINAL

MG DIAGNOSTIC BILATERAL MAMMOGRAM TOMOSYNTHESIS

ULTRASOUND BREAST

?

Assessment & Plan

Neoplasm of uncertain origin

- Multiple lytic bone lesions identified on MRI and CT
- No primary malignancy found
- Diagnostic bilateral mammogram ordered stat
- Transvaginal pelvic ultrasound ordered
- Discussed endometrial biopsy risks and low yield if endometrial area is clear
- Emphasized hydration and nutrition before undiagnosed clinic appointment
- Oncology follow-up scheduled for 07/15/2026 at undiagnosed clinic
- Will be scheduling consult with neurosurgeon

Pathologic fracture of left 11th rib

- Fracture with pain on imaging
- Imaging records reviewed
- Discussed pain management and addiction risks with narcotics
- Instructed not to drive while taking Tylenol with codeine
- Prescribed Tylenol with codeine every 6 hours as needed
- She will let us know if this does not give her adequate pain control

Pulmonary nodules

- Scattered lung nodules up to 4 mm on CT
- No evidence of primary malignancy
- CT chest reviewed
- Discussed monitoring protocol and importance of repeat imaging in 3 months
- Repeat CT chest in 3 months
- We discussed this repeat CT chest will likely be done at Fred Hutch with oncology

Follow up

- She has appointment scheduled for oncology tomorrow
- We discussed that they will be taking over her care, and I will follow along.
- Discussed / reviewed indications, risks, benefits, side effects, and proper use of med(s) given today. Questions / concerns re: medication(s) addressed.
- PDMP reviewed and consistent
- Patient expressed understanding and agreement with above treatment plan.

Make Me the Author Attestation: Preliminary History Recorded by Clinical Staff

Preliminary information is recorded by Clinical Staff.
Recorded information was reviewed for accuracy and edited by Leilani D Paras, MD, who also personally confirmed the chief complaint with patient and completed HPI.

Voice recognition technology may have been employed in the creation of this record.

E/M code was selected based on 35 minutes spent on the date of encounter reviewing pertinent history and previous diagnostics, performing medically appropriate examination and evaluation, ordering diagnostic tests and/or medications, counseling and education to patient/family/caregiver. This is excludes activities performed by clinical staff.
For G2211, Patient chronically managed by me for ongoing care related to this patient's single, serious, or complex condition; I will follow/have followed the patient longitudinally for this condition

There are no Patient Instructions on file for this visit.

Progress Notes

Tam C, MA - 07/14/2026 8:29 AM PDT

Formatting of this note might be different from the original.

Subjective:

This patient is unaccompanied in the exam room.
Yvonne Franklin has provided verbal consent for the use of DAX during today's office visit. Three identifiers (Yvonne Franklin, 6/17/1979, 360-201-2728) have been used to identify the patient.

Yvonne is a 47 y.o. female who presents for:

Chief Complaint

Patient presents with

• / IUD Removal

*Patient is still bleeding since 6/23/2026 *

Concerns:

History of Present Illness
The patient presented today with concerns related to her intrauterine device (IUD) and ongoing gynecological symptoms.

IUD Removal

- The patient requested removal of her Mirena IUD, which was placed approximately one year ago.

Vaginal Bleeding

- She reported experiencing intermittent vaginal bleeding since her last menstrual period, which began on 06/23/2026.

Cancer Evaluation

- The patient is currently undergoing evaluation for cancer of unknown primary.

- She inquired about the possibility of having an endometrial biopsy performed at the same time as the IUD removal.
- After discussion with Dr. Egnal and Dr. Paras, the plan is to proceed with IUD removal today and defer the biopsy until after a pelvic ultrasound is completed.
- The patient has an appointment with her primary care provider in the next couple of hours and intends to keep that appointment.

Current pharmacy: Safeway Kirkland

Results

Assessment/Plan:

Assessment & Plan

47-year-old female who reports being evaluated for cancer of unknown primary
Presents requesting IUD removal

Informed consent for IUD removal obtained
Risk benefits and alternatives discussed
Patient would like to proceed with IUD removal

PROCEDURESpeculum placed. The IUD strings are seen at external os and grasped with sterile ring forceps and removed without difficulty.

.

ICD-10-CM

1. / **Encounter for IUD removal** / **Z30.432**

No orders of the defined types were placed in this encounter.

?

- Return for follow-up visit on:

Future Appointments

Provider / Department / Center / Telehealth Mode

7/14/2026 10:40 AM / **Paras, Leilani, MD** / Optum- Eastside Family Medicine / EASTSIDE

9/1/2026 9:00 AM / **Paras, Leilani, MD** / Optum- Eastside Family Medicine / EASTSIDE

or sooner for any new or worsening symptoms or concerns.

- Patient reminded about overdue HM and the importance of annual preventative care appointments.
- Discussed with patient (and guardian/parent if applicable) treatment recommendations, any medication information (including risk and benefits of antibiotics/medications if prescribed), strict return precautions given, and when to seek immediate medical attention. Additionally AVS printed for patient unless patient declined.
- The concerns and questions of the patient (and guardian/parent if applicable) were addressed. The patient (and guardian/parent if applicable) verbally demonstrated understanding of and agreement with the plan.

Make Me the Author Attestation: Preliminary History Recorded by Clinical Staff

Preliminary information is recorded by Clinical Staff.
Recorded information was reviewed for accuracy and edited by Ana Huston, ARNP, who also personally confirmed the chief complaint with patient and completed HPI.

Patient Active Problem List

Diagnosis

- / Abdominal pain
- / Herpes simplex
- / Internal hemorrhoids
- / Migraine headache
- / Premature ventricular contractions
- / Esophageal reflux
- / Social phobia involving fear of public speaking
- / Supraventricular bigeminy
- / Tension-type headache
- / Vitamin D deficiency
- / Generalized anxiety disorder
- / Mild intermittent asthma without complication

Miscellaneous Notes

Telephone Encounter - Michelle M, MA - 07/15/2026 3:34 PM PDT

Formatting of this note might be different from the original.
Spoke to patient regarding the transvaginal ultrasound referral and asked patient to see if she can get it expedited from her oncologist that she was going to see today.

She understood.

No further action required.

MICHELLE MCINTOSH, MA

Miscellaneous Notes

Telephone Encounter - Judith L, CMA - 07/15/2026 11:37 AM PDT

Formatting of this note might be different from the original.
Fred Hutch mammogram order change needed printed and placed in your office inbox today.
JUDY LINDSTROM, CMA

I have pended order at Fred Hutch S Lake Union for you to sign.
Patient will need to be notified of location change.

Electronically signed by Judith L, CMA at 07/15/2026 11:44 AM PDT

Telephone Encounter - Leilani Paras, MD - 07/15/2026 3:44 PM PDT

Formatting of this note might be different from the original.
Spoke with patient to discuss where she would like her mammogram done.
She states she had diagnostic mammogram and ultrasound this AM. (She had taken written and signed orders from our appointment yesterday).

She reported that mammogram showed L breast mass and enlarged lymph nodes on right. They have breast biopsy and lymph node biopsy scheduled for next Wednesday.

She has appointment with oncologist on Fred Hutch today at 430.

No further need for mammogram or ultrasound orders. Closing TE

Miscellaneous Notes

Telephone Encounter - Leilani Paras, MD - 07/21/2026 7:00 AM PDT

Formatting of this note might be different from the original.
We received her images in CD from UW. Please tell her we cannot keep these, since we don't have any computers to read them anymore. Please ask if she would like us to mail them to her or pick it up from front desk. Will place CD in my outbox. Thanks

Electronically signed by Leilani Paras, MD at 07/21/2026 7:01 AM PDT

Telephone Encounter - Francis T, MA - 07/21/2026 8:21 AM PDT

Telephone Encounter - Leilani Paras, MD - 07/29/2026 5:06 PM PDT

Formatting of this note might be different from the original.
Please let patient know that we received a note about her having both alprazolam and morphine. Please confirm morphine is being prescribed at Fred Hutch.

I know she knows this, but please confirm she knows to NOT take any sedating medications or substances together - the alprazolam and morphine are both sedating so should not be taken together and they should not be taken with other sedating substance (like alcohol).

Will leave form in my inbox, which I've completed. Please fax back in after we've discussed with pt. Thanks

[table#1]:
Subjective:
Yvonne is a 46 y.o. female who presents for:
[table#2]:
Chief Complaint

| Patient presents with |
| • | Contraception |
| | | *IUD consult* |
HPI:
46-year-old female presents today for evaluation of IUD removal and reinsertion.
She does not check her string at home. Has not had a speculum or pelvic exam within the last year.
She had her Mirena IUD placed in 2017. She is due for replacement.
Denies complications with initial placement of IUD.
Currently have occasional breakthrough bleeding, but otherwise amenorrheic with use of Mirena IUD.
Would like to continue hormonal IUD for contraceptive management.

Problem List
Current Medications
Reviewed and updated this visit by provider:
Review of Systems
Constitutional: Negative for chills and fever.
Genitourinary: Negative for menstrual problem.
[table#3]:
Objective:
Blood pressure 100/66, pulse **(!) 56**, temperature 97.8 °F (36.6 °C), temperature source Oral, resp. rate 16, height 5' 5" (1.651 m), weight 130 lb (59 kg).

Physical Exam
Constitutional:
Appearance: Normal appearance.
HENT:

Head: Normocephalic and atraumatic.
Cardiovascular:
Rate and Rhythm: Normal rate.
Pulmonary:
Effort: Pulmonary effort is normal.
Genitourinary:

General: Normal vulva.
Vagina: Normal.
Cervix: Normal.
Uterus: Normal.
Adnexa: Right adnexa normal and left adnexa normal.
Comments: **Iud string in place**
Neurological:
Mental Status: She is alert and oriented to person, place, and time.
Psychiatric:
Mood and Affect: Mood normal.

Behavior: Behavior normal.
[table#4]:
Assessment and Plan:
1. Encounter for routine checking of intrauterine contraceptive device (IUD) (Primary)
IUD string in place
Precedure, risks, and benefits discussed regarding Mirena IUD removal and replacement
Follow-up was scheduled for procedure

[table#7]:
-- Discussed with Patient and made AVS available through MyChart with treatment recommendations, any medication information (including risk and benefits of antibiotics/medication if prescribed), strict return precautions given, and when to seek immediate medical attention.

-- The concerns and questions of the Patient were addressed. The Patient verbally demonstrated understanding of and agreement with the plan.
Make Me the Author Attestation: Preliminary History Recorded by Clinical Staff
Preliminary information is recorded by Clinical Staff.
Recorded information was reviewed for accuracy and edited by Vi Tran, MD, who also personally confirmed the chief complaint with patient and completed HPI.

E/M code was selected based on 20 minutes spent on the date of encounter reviewing pertinent history and previous diagnostics, performing medically appropriate examination and evaluation, ordering diagnostic tests and/or

medications, counseling and education to patient/family/caregiver. This excludes separately reportable services.

For G2211, Patient chronically managed by me for ongoing care related to this patient's single, serious, or complex condition; I will follow/have followed the patient longitudinally for this condition

Subjective:
Yvonne is a 46 y.o. female who presents for:
[table#2]:
Chief Complaint

| Patient presents with |
| • | IUD Removal |
| • | IUD Insertion |
HPI:
46-year-old female presents today for scheduled IUD removal and insertion. Contraceptive consult completed 8/14/2025. Patient has no new concerns today. Consent signed by patient.
Problem List
Current Medications
Reviewed and updated this visit by provider:
Review of Systems
Constitutional: Negative.

Genitourinary: Negative.
[table#3]:
Objective:
Blood pressure 102/64, pulse 68, temperature 98 °F (36.7 °C), temperature source Oral, resp. rate 16, height 5' 5.25" (1.657 m), weight 126 lb (57.2 kg).
Physical Exam
Constitutional:
Appearance: Normal appearance.
HENT:
Head: Normocephalic and atraumatic.

Cardiovascular:
Rate and Rhythm: Normal rate.
Pulmonary:
Effort: Pulmonary effort is normal.
Genitourinary:
General: Normal vulva.

Vagina: Normal.
Cervix: Normal.
Uterus: Normal.
Adnexa: Right adnexa normal and left adnexa normal.

Comments: **IUD string in place**
Neurological:
Mental Status: She is alert and oriented to person, place, and time.
Psychiatric:
Mood and Affect: Mood normal.
Behavior: Behavior normal.
Procedure: IUD removal and insertion
IUD type: Mirena
The patient was positioned in the lithotomy position.
The speculum was inserted to visualize the cervix. IUD string visible outside the cervical os.

Ring forceps were used to remove the IUD in its entirety.
The cervix was cleansed with an antiseptic solution.
A tenaculum was applied to the cervix for stabilization.
Uterine sounding was performed to measure the depth of the uterine cavity: 6cm.
The IUD was loaded into the insertion device according to the manufacturer's instructions.
The IUD was inserted through the cervical canal and placed at the fundus of the uterus.
The strings were trimmed to approximately 3 cm outside the cervical os.
The tenaculum and speculum were removed.
[table#4]:
| Assessment and Plan: |

| --- |
1. Encounter for IUD removal and reinsertion (Primary)
Patient advised on expected cramping and spotting.
Educated on signs of potential complications (e.g., severe pain, heavy bleeding, signs of infection) and instructed to contact the office if these occur.
Follow-up as needed
- INSERT INTRAUTERINE DEVICE
- levonorgestrel (Mirena) IUD 52 mg
- levonorgestrel (Mirena) 52 MG IUD; 1 Intra Uterine Device by intrauterine route -. Inserted in-clinic. Leave on medication list for interaction checking
- REMOVE INTRAUTERINE DEVICE
-- Discussed with Patient and made AVS available through MyChart with treatment recommendations, any medication information (including risk and benefits of antibiotics/medication if prescribed), strict return precautions given, and when to seek immediate medical attention.

-- The concerns and questions of the Patient were addressed. The Patient verbally demonstrated understanding of and agreement with the plan.

Objective:

BP 112/74 (Arm: LEFT, Position: SITTING, Cuff Size: ADULT) | Pulse 76 | Resp 16 | Ht 5' 5" (1.651 m) | Wt 128 lb (58.1 kg) | LMP 01/10/2026 (Approximate) | SpO2 99% | BMI 21.30 kg/m²

Physical Exam

Vitals reviewed.
Constitutional:
General: She is not in acute distress.
Cardiovascular:
Rate and Rhythm: Normal rate and regular rhythm.
Heart sounds: Normal heart sounds.
Pulmonary:
Effort: Pulmonary effort is normal.

Breath sounds: Normal breath sounds.
Abdominal:
General: Bowel sounds are normal. There is no distension.
Palpations: Abdomen is soft. There is no mass.
Tenderness: There is no abdominal tenderness. There is no guarding or rebound.
Genitourinary:
Exam position: Lithotomy position.
Vagina: Normal.
Cervix: Normal. No cervical motion tenderness, friability or lesion.
Uterus: Normal. Not tender.

Adnexa: Right adnexa normal and left adnexa normal.
Right: No mass, tenderness or fullness.
Left: No mass, tenderness or fullness.
Comments: **Patient is on her menses - there is red blood in vaginal canal**
IUD strings visualized and in place
Skin:
General: Skin is warm.
Capillary Refill: Capillary refill takes less than 2 seconds.
Neurological:
General: No focal deficit present.

Mental Status: She is alert and oriented to person, place, and time.
Psychiatric:
Mood and Affect: Mood normal.
Behavior: Behavior normal.
Thought Content: Thought content normal.
Judgment: Judgment normal.
[table#8]:
Assessment/Plan:
[table#9]:

		ICD-10-CM	
1.	**Menometrorrhagia**	**N92.1**	**TSH REFLEX TO FT4**
			HEMOGRAM (CBC NO DIFF)
			FERRITIN
			VITAMIN B12 (LAB)
			IRON PROFILE
			US PELVIS COMPLETE WITH TRANSVAGINAL
			ESTROGENS, TOTAL IA
			FSH

2.	Other fatigue	R53.83	TSH REFLEX TO FT4
			HEMOGRAM (CBC NO DIFF)
			FERRITIN
			VITAMIN B12 (LAB)
			IRON PROFILE

| 3. | Vitamin D deficiency | E55.9 | 25 OH VITAMIN D |
| | |

Assessment & Plan

Menometrorrhagia:
- Periods every 21 days for 7 days with heavy flow since IUD insertion in August 2025. Reports low energy and fatigue.
- Order labs: CBC, iron, ferritin, B12, TSH, reflex to free T4, vitamin D.
- Conduct ultrasound for IUD placement and uterine abnormalities.
- Consider low-dose OCP if results are normal.
- Discussed that these symptoms can occur with IUDs. Oftentimes, they resolve but may take 6-8 months.
Fatigue:
- Significant fatigue despite adequate sleep and life
style improvements.
- Order labs: iron, ferritin, B12, CBC, TSH, reflex to free T4.

Vitamin D deficiency:
- History of vitamin D deficiency, taking 5000 IU daily x 2 days
- Check vitamin D levels for further supplementation.
- Continue current vitamin D regimen until results available.
Follow-up
-Management per results
-Return to clinic if symptoms increase/change. Return precautions given
-Patient expressed understanding and agreement with above treatment plan.

Make Me the Author Attestation: Preliminary History Recorded by Clinical Staff

Preliminary information is recorded by Clinical Staff.

Recorded information was reviewed for accuracy and edited by Leilani D Paras, MD, who also personally confirmed the chief complaint with patient and completed HPI.
Voice recognition technology may have been employed in the creation of this record.

E/M code was selected based on 33 minutes spent on the date of encounter reviewing pertinent history and previous diagnostics, performing medically appropriate examination and evaluation, ordering diagnostic tests and/or medications, counseling and education to patient/family/caregiver. This is excludes activities performed by clinical staff.

For G2211, Patient chronically managed by me for ongoing care related to this patient's single, serious, or complex condition; I will follow/have followed the patient longitudinally for this condition
[table#10]:
Patient Instructions

Dear Ms.Franklin
Thank you for including me in your health care today.
Here are the diagnoses that we discussed today and what we are doing about it:
[table#11]:
		ICD-10-CM
1.	**Menometrorrhagia**	**N92.1**
2.	Other fatigue	R53.83
3.	Vitamin D deficiency	E55.9

We're checking labs and will contact you via MyChart message with results

Please schedule your pelvic ultrasound at:
Rayus Radiology
1310 116th Ave NE, Suite E
Bellevue, WA 98004
Scheduling 855-643-7226
Phone 425-637-9729

Please let me know if you do not hear back from me about 7-10 days after getting your imaging. I'll need to call them to get your results.
We'll discuss further management based on results.
No new prescriptions were ordered during this visit.

Subjective:
This patient is unaccompanied in the exam room.
Yvonne Franklin has provided verbal consent for the use of DAX during today's office visit. Three identifiers (Yvonne Franklin, 6/17/1979, 360-201-2728) have been used to identify the patient.
Yvonne is a 47 y.o. female who presents for:

[table#2]:
Chief Complaint
Patient presents with
•	IUD Removal
		*Patient is still bleeding since 6/23/2026 *

Concerns:
History of Present Illness
The patient presented today with concerns related to her intrauterine device (IUD) and ongoing gynecological symptoms.
IUD Removal
- The patient requested removal of her Mirena IUD, which was placed approximately one year ago.
Vaginal Bleeding
- She reported experiencing intermittent vaginal bleeding since her last menstrual period, which began on 06/23/2026.
Cancer Evaluation
- The patient is currently undergoing evaluation for cancer of unknown primary.
- She inquired about the possibility of having an endometrial biopsy performed at the same time as the IUD removal.
- After discussion with Dr. Egnal and Dr. Paras, the plan is to proceed with IUD removal today and defer the biopsy until after a pelvic ultrasound is completed.
- The patient has an appointment with her primary care provider in the next couple of hours and intends to keep that appointment.

Progress Notes by Leilani Paras, MD at 7/18/2025 8:03 AM

Subjective:
This patient is unaccompanied in the exam room.
Yvonne Franklin
is a
46 y.o.
female
who is here for:
Chief Complaint
Patient presents with
•

Physical
Patient is here for a Annual Physical Exam patient is fasting
Patient see eye dr every year or two
Patient gets exercises every week
Just got back from 2 week trip from Hawaii
Concerns: see below
Diet: Healthy overall, hubby is a good chef
Exercise: No exercise usually because of work. But she exercised every day while in Hawaii
Sleep: sleeps efficiently when she does sleep between 12-6AM
Voiding: Feeling constantly bloated, feels like her gut is out of wack. No issues with urination or BMs. No rectal bleeding

Work: Still at previous job - no work/life balance, stressful. Working around the clock. Interviewing for new job.
Household: Lives with husband and 2 kids
EtOH: 1-2 glasses of wine daily - it helps her relax. We discussed keeping it down to 1 drink/day
Tobacco: None
Drug: None
Menstruation: no menses on Mirena IUD until recently, has occasional spotting
Sexually activity / contraception: Mirena IUD - placed in 2017 (needing replacement 2025) - will make an appointment for removal and re-insertion.
Immunizations: These were reviewed with patient today
Pneumonia vaccine: PCV20 - declining
TdaP vaccine: 11/15/16

Flu vaccine: n/a, not currently the flu season
Hepatitis B vaccine: declining
Shingrix: n/a

COVID vaccines: Declining new COVID shot
RSV vaccine: n/a
Screening:
- last pap 5/26/21 -NILM, HPV neg (due 2026)
- last mammogram and ultrasound 4/10/25 - neg
- last colonoscopy 10/18/21 - cleared x 5 yrs (Dr. Selinger)
GAD.

-Last seen for this on 11/15/24.
-At that time, her increased citalopram dose (20mg) was helping
-No side effects. No insomnia since switching to AM dosing
-No longer taking her citalopram. She was traveling a lot for a couple of months and forgot to take it with her. But would like to restart. She thinks it would help with the upcoming transition and with the drinking
-Alprazolam use - sparingly. Worked well when she used it.
-Alprazolam 0.5mg - last refilled 7/17/24 - #15, no refill
-Prior treatment:
-Sertraline 100mg- caused sedation, felt more anxious and uneasy. 50mg was not effective
Mild intermittent asthma.
-Albuterol HFA as needed - rarely needs it.

-Has used it 3 times in the last year.
-Not needing refill, will let me know if/when she needs refill
-Declining PCV20 today
Migraines.
-Controlled mostly with propranolol 10mg daily.
-Takes Sumatriptan as needed - works when she takes it immediately.
-Has not had any migraines for a long time. Not needing triptan refill at this time, will let me know if/when she does
Fear of public speaking. Propranolol 10mg daily is helping.
HSV I. Valacyclovir as needed, works well as needed
Vit D def.

-not taking Vit D
-she spent 2 weeks in HI - outside x 8 hrs/day, wore sunscreen
Abdominal cramping / irritable bowel syndrome.
-Dicyclomine as needed - has not needed to take it.
-EGD / colonoscopy 10/18/21 (Dr. Selinger)
GERD.
-Findings seen on EGD.
-Has not been using omeprazole, will let me know if/when she needs refill
Dysphagia.
-Had increased symptoms last year and was referred back to GI.

-Didn't get a chance to see GI last year, would like to re-referral
-No episodes of food getting stuck. Symptoms may be better, definitely not worse.
Health Maintenance items addressed during this visit:
All Health care Maintenance items pended for provider review. See orders for items that patient agreed to perform.
Health Care Maintenance Items:
The following healthcare maintenance items were reviewed regarding risks / benefits and were either accepted or declined.
For those accepted, the appropriate lab tests were ordered, appointments made and / or phone numbers given for

patient to follow up.
For those that were declined, the pt declined despite fully understanding that by foregoing this (these) procedure(s), they increase their risk of undiagnosed cancer or disease and a potential missed opportunity for early detection, prevention or treatment.
The patient admits that they understand that this is against medical advice of their doctor and state that they freely choose with full informed consent to not participate in this screening / testing process.
There are no preventive care reminders to display for this patient.

Last Colonoscopy / Diabetic Eye Exam

, who also personally confirmed the chief complaint with patient and completed HPI.

Patient Instructions
Dear Ms.Franklin
Thank you for including me in your health care today.
Here are the diagnoses that we discussed today and what we are doing about it:
ICD-10-CM
1.
Preventative health care
Z00.00
2.
Generalized anxiety disorder

F41.1
3.
Mild intermittent asthma without complication
J45.20
4.
Migraine without aura and without status migrainosus, not intractable
G43.009
5.
Social phobia involving fear of public speaking
F40.10

6.
Herpes simplex
B00.9
7.
Vitamin D deficiency
E55.9
8.
Irritable bowel syndrome with diarrhea
K58.0
9.

Gastroesophageal reflux disease without esophagitis
K21.9
10.
Abdominal cramping
R10.9
11.
Other acute gastritis without hemorrhage
K29.00
12.
Generalized anxiety disorder

F41.1
13.
Oropharyngeal dysphagia

R13.12
Restart citalopram 20mg - 1/2 tablet daily for 1 wk then increase to 1 tablet daily thereafter. Please send a MYChart message in 1 month to let me know how you're doing.
Continue current medications
Please make an appointment with Dr. Selinger
We're checking labs and will contact you via MyChart
Please make an appointment for your Mirena IUD - removal and re-insertion of new one.
Return to clinic 1 year for complete physical exam, sooner as needed

Contraception
IUD consult
HPI:
46-year-old female presents today for evaluation of IUD removal and reinsertion.
She does not check her string at home. Has not had a speculum or pelvic exam within the last year.
She had her Mirena IUD placed in 2017. She is due for replacement.
Denies complications with initial placement of IUD.
Currently have occasional breakthrough bleeding, but otherwise amenorrheic with use of Mirena IUD.
Would like to continue hormonal IUD for contraceptive management.

Review of Systems
Constitutional: Negative

.

Genitourinary: Negative.
Objective:
Blood pressure 102/64, pulse 68, temperature 98 °F (36.7 °C), temperature source Oral, resp. rate 16, height 5' 5.25" (1.657 m), weight 126 lb (57.2 kg).
Physical Exam
Constitutional:

Appearance: Normal appearance.
HENT:

Head: Normocephalic and atraumatic.
Cardiovascular:
Rate and Rhythm: Normal rate.
Pulmonary:
Effort: Pulmonary effort is normal.
Genitourinary:
General: Normal vulva.
Vagina: Normal.
Cervix: Normal.
Uterus: Normal.

Adnexa: Right adnexa normal and left adnexa normal.
Comments: IUD string in place
Neurological:
Mental Status: She is alert and oriented to person, place, and time.
Psychiatric:
Mood and Affect: Mood normal.
Behavior: Behavior normal.
Procedure: IUD removal and insertion
IUD type: Mirena
The patient was positioned in the lithotomy position.

The speculum was inserted to visualize the cervix. IUD string visible outside the cervical os.
Ring forceps were used to remove the IUD in its entirety.
The cervix was cleansed with an antiseptic solution.
A tenaculum was applied to the cervix for stabilization.
Uterine sounding was performed to measure the depth of the uterine cavity: 6cm.
The IUD was loaded into the insertion device according to the manufacturer's instructions.
The IUD was inserted through the cervical canal and placed at the fundus of the uterus.
The strings were trimmed to approximately 3 cm outside the cervical os.
The tenaculum and speculum were removed.
Assessment and Plan:

1. Encounter for IUD removal and reinsertion (Primary)
Patient advised on expected cramping and spotting.
Educated on signs of potential complications (e.g., severe pain, heavy bleeding, signs of infection) and instructed to contact the office if these occur.
Follow-up as needed
- INSERT INTRAUTERINE DEVICE
- levonorgestrel (Mirena) IUD 52 mg
- levonorgestrel (Mirena) 52 MG IUD; 1 Intra Uterine Device by intrauterine route -. Inserted in-clinic. Leave on medication list for interaction checking
- REMOVE INTRAUTERINE DEVICE
-- Discussed with Patient and made AVS available through MyChart with treatment recommendations, any medication information (including risk and benefits of antibiotics/medication if prescribed), strict return precautions given, and when to seek immediate medical attention.
-- The concerns and questions of the Patient were addressed. The Patient verbally demonstrated understanding of

and agreement with the plan.

Bleeding
Patient stated been having issues with her IUD with lots of bleeding, every 21 days.

History of Present Illness
46-year-old female here for IUD follow-up.
IUD Follow-up
- IUD inserted end of August 2025
- Menstrual cycles every 21 days, lasting 7 days, with heavy flow requiring tampons and pads changed multiple times daily
- Consistent for 5 months
- Did not have these issues with previous IUD
Fatigue
- Reports significant fatigue despite good sleep hygiene and no alcohol
- Suspects iron or vitamin D deficiency

- History of anemia and vitamin D deficiency
- Resumed vitamin D supplements yesterday
- Currently on day 5 of menstrual cycle
- No hot flashes or night sweats
Social History
- Alcohol: Abstinent
- Sleep: Good, no issues
GYNECOLOGICAL HISTORY
- Cycle Length: 21 days
- Duration: 7 days

- Frequency and Flow: Heavy, tampons and pads changed multiple times daily

Objective:
BP 112/74 (Arm: LEFT, Position: SITTING, Cuff Size: ADULT) | Pulse 76 | Resp 16 | Ht 5' 5\" (1.651 m) | Wt 128 lb (58.1 kg) | LMP 01/10/2026 (Approximate) | SpO2 99% | BMI 21.30 kg/m²
Physical Exam

Vitals reviewed.
Constitutional:
General: She is not in acute distress.
Cardiovascular:
Rate and Rhythm: Normal rate and regular rhythm.
Heart sounds: Normal heart sounds.
Pulmonary:
Effort: Pulmonary effort is normal.
Breath sounds: Normal breath sounds.
Abdominal:

General: Bowel sounds are normal. There is no distension.
Palpations: Abdomen is soft. There is no mass.
Tenderness: There is no abdominal tenderness. There is no guarding or rebound.
Genitourinary:
Exam position: Lithotomy position.
Vagina: Normal.
Cervix: Normal. No cervical motion tenderness, friability or lesion.
Uterus: Normal. Not tender.
Adnexa: Right adnexa normal and left adnexa normal.
Right: No mass, tenderness or fullness.

Left: No mass, tenderness or fullness.
Comments: Patient is on her menses - there is red blood in vaginal canal
IUD strings visualized and in place
Skin:
General: Skin is warm.
Capillary Refill: Capillary refill takes less than 2 seconds.
Neurological:
General: No focal deficit present.
Mental Status: She is alert and oriented to person, place, and time.
Psychiatric:

Mood and Affect: Mood normal.
Behavior: Behavior normal.
Thought Content: Thought content normal.
Judgment: Judgment normal.

Assessment & Plan

Menometrorrhagia:
- Periods every 21 days for 7 days with heavy flow since IUD insertion in August 2025. Reports low energy and fatigue.
- Order labs: CBC, iron, ferritin, B12, TSH, reflex to free T4, vitamin D.
- Conduct ultrasound for IUD placement and uterine abnormalities.
- Consider low-dose OCP if results are normal.
- Discussed that these symptoms can occur with IUDs. Oftentimes, they resolve but may take 6-8 months.
Fatigue:
- Significant fatigue despite adequate sleep and lifestyle improvements.
- Order labs: iron, ferritin, B12, CBC, TSH, reflex to free T4.
Vitamin D deficiency:

- History of vitamin D deficiency, taking 5000 IU daily x 2 days
- Check vitamin D levels for further supplementation.
- Continue current vitamin D regimen until results available.
Follow-up
-Management per results
-Return to clinic if symptoms increase/change. Return precautions given
-Patient expressed understanding and agreement with above treatment plan.
Make Me the Author Attestation: Preliminary History Recorded by Clinical Staff
Preliminary information is recorded by Clinical Staff.
Recorded information was reviewed for accuracy and edited by

Leilani D Paras, MD
, who also personally confirmed the chief complaint with patient and completed HPI.
Voice recognition technology may have been employed in the creation of this record.
E/M code was selected based on
33

minutes spent on the date of encounter reviewing pertinent history and previous diagnostics, performing medically appropriate examination and evaluation, ordering diagnostic tests and/or medications, counseling and education to patient/family/caregiver. This is excludes activities performed by clinical staff.

For G2211, Patient chronically managed by me for ongoing care related to this patient's single, serious, or complex condition; I will follow/have followed the patient longitudinally for this condition

female
who presents for:
Chief Complaint
Patient presents with
•
Back Pain
Started 2 weeks ago pian started to developed.

History of Present Illness:
History of Present Illness
A 46-year-old female presents with right upper back pain following a traumatic event.
Right Upper Back Pain
- Three weeks ago, she choked on a supplement pill and her husband applied forceful pressure to her right upper back and rib area
(back blows) to help her dislodge the food
- No immediate pain was noted.
- Two weeks ago, she developed dull, constant pain below the right scapula, making breathing difficult and interfering with daily activities.

- Pain is localized to the right side, rated 5/10 at baseline, increasing to 8-9/10 with activities like sneezing or dishwashing.
- Sneezing triggers sharp exacerbations; deep breathing, coughing, and certain movements worsen discomfort.

- No numbness, tingling, weakness, cold symptoms, fevers, or chills.
No dyspnea, no palpitations, no chest pain.
- Skiing and running during her trip may have further irritated the area.
- Ibuprofen and Tylenol provide partial relief.
- Previously used hydrocodone for pain management.
Uses alprazolam as needed
for anxiety

Assessment & Plan
Right upper back pain:
- Constant dull pain below right scapula, worsened by sneezing, washing dishes, deep breathing, and full arm extension. No numbness, tingling, weakness, cold symptoms, fevers, or chills.
- Tenderness and spasm in upper trapezius muscle. Rhomboids normal and non-tender. No pain with palpation of thoracic spine, lumbar area, or right shoulder. Pain present only at full range of arm motion.
- Ordered chest x-ray and pulse oximetry to rule out fracture and assess lung function. Await x-ray results before initiating physical therapy. If x-ray is negative, pain likely due to trauma-related irritation.
- Prescribe hydrocodone with Tylenol for severe pain, not to exceed 4000 mg Tylenol per day. Continue ibuprofen as needed. Take all medications with food.
- Refer to physical therapy if x-ray is negative. Hold physical therapy if fracture is detected.
- Return to clinic or ER if symptoms worsen or persist.

- Discussed / reviewed indications, risks, benefits, side effects, and proper use of med(s) given today. Questions / concerns re: medication(s) addressed. She understands that the hydrocodone can cause sedation. She is to not drive or operate heavy machinery after taking it. She understands to not take with other sedating medications / substances, including EtOH and her alprazolam.

- PDMP reviewed and consistent
- Patient expressed understanding and agreement with above treatment plan.
Make Me the Author Attestation: Preliminary History Recorded by Clinical Staff

Progress Notes by Leilani Paras, MD at 4/24/2026 7:29 AM

Yvonne Franklin
has provided verbal consent for the use of DAX during today's office visit. Three identifiers (
Yvonne Franklin
,
6/17/1979
,
360-201-2728
) have been used to identify the patient.
Modified evaluation performed based on CDC protocols for COVID19.
The pros and cons of a video visit for providing this care were reviewed with

Yvonne Franklin
and their verbal consent has been given to deliver this visit.
This visit was conducted real time via synchronous interactive video & audio conferencing technology utilizing a HIPAA compliant platform. Patient
is located in their home
in the state of Washington.
Leilani D Paras, MD
is located in the
EFMC FAMILY MEDICINE
office, and is licensed in the state of Washington.
Discussed with patient/parent: You have chosen to receive care through the use of telemedicine.

Telemedicine enables health care providers at different locations to provide safe, effective, and convenient care through the use of technology.
As with any health care service, there are risks associated with the use of telemedicine, including equipment failure, poor image resolution, and information security issues.
You also understand that I cannot physically examine you and that you may need to come to clinic to complete the assessment.
I have discussed the benefits of MyChart. Patient
is already signed up for MyChart.
Patient Verifier :
Yvonne Franklin
,

6/17/1979
Patient is accompanied by

her
self in the video visit.
Do you consent to the use of telemedicine in your medical care today?
Yes
Patient/parent verbally understands the risks and benefits of telemedicine as explained.
All questions regarding telemedicine answered.
Preferred phone number to contact patient is :
360-201-2728
Is it okay to leave a detailed voicemail on this number?
Yes

Follow Up

Back pain
HPI:
Follow up on back pain
History of Present Illness
The patient is a 46-year-old female presenting for follow-up regarding persistent right upper back pain.
Right Upper Back Pain
- She has experienced constant right upper back pain for two months, which has not improved with physical therapy or prescribed exercises.
- The pain worsens with movement, deep breathing, and sneezing.
- Her husband has noticed that the affected area feels softer than the opposite side, raising concern for inflammation.
- She manages the pain with ibuprofen and Tylenol, taking three ibuprofen and two Tylenol up to three times daily, spaced 4 to 6 hours apart.

- Pain intensity is rated 6–8/10 before medication, decreasing to 1/10 after dosing.
- She is concerned about gastrointestinal effects from frequent medication use and takes them with food and water.
- Hydrocodone was discontinued due to side effects.
- She has not tried muscle relaxants and is considering this option.
- Review of films done on 2/26/26 showed:
- Xray right ribs:
Visualized ribs are intact. No displaced fracture.
- Chest x-ray:
-Healed left lateral ninth rib fracture is present.
-Otherwise normal chest.

-No pneumothorax.
Very Frequent Periods
- She plans a separate appointment to address very frequent periods despite having an IUD.
- She wishes to discuss birth control options.
GYNECOLOGICAL HISTORY:
- Very frequent periods
Problem list, medical/surgical history, medications, allergies, immunizations, social and family history reviewed and appropriately updated in Epic.

Limited Exam via patient's / Parent's video

Physical Exam
Constitutional:
General: She is not in acute distress.
Pulmonary:
Effort: Pulmonary effort is normal. No respiratory distress.
Neurological:
General: No focal deficit present.
Mental Status: She is alert and oriented to person, place, and time.
Psychiatric:
Mood and Affect: Mood normal.

Behavior: Behavior normal.
Thought Content: Thought content normal.
Judgment: Judgment normal.
Assessment and Plan:
ICD-10-CM
1.
Upper back pain on right side
M54.9
REFERRAL / CONSULT TO PHYSICAL MEDICINE REHAB EXTERNAL ONLY
cyclobenzaprine (Flexeril) 10 MG tab

Assessment & Plan
Upper back pain:
- Musculoskeletal pain persists despite physical therapy and analgesics
- Prior x-rays and chest x-ray show no acute fracture; healed left ninth rib fracture is unrelated
- Discussed musculoskeletal etiology, medication side effects, and physical medicine and rehabilitation
- Reviewed sedation risk with cyclobenzaprine and importance of taking medications with food
- No new imaging ordered; previous imaging reviewed
- Refer to Overlake Physical Medicine and Rehabilitation
- Prescribe cyclobenzaprine 10 mg: take 0.5 to 1 tablet up to three times daily as needed

- Continue ibuprofen and acetaminophen as needed with food

- Instruct to avoid driving or operating heavy machinery while using cyclobenzaprine
- Make appointment with Overlake PM&R.
- She will make a separate appointment to address very frequent periods despite having an IUD.
- Return to clinic in the meantime if symptoms increase/change
- Discussed / reviewed indications, risks, benefits, side effects, and proper use of med(s) given today. Questions / concerns re: medication(s) addressed.
- Patient expressed understanding and agreement with above treatment plan.

Progress Notes by Leilani Paras, MD at 5/13/2026 6:49 AM

Yvonne Franklin
has provided verbal consent for the use of DAX during today's office visit. Three identifiers (
Yvonne Franklin
,
6/17/1979
,
360-201-2728
) have been used to identify the patient.
Modified evaluation performed based on CDC protocols for COVID19.
The pros and cons of a video visit for providing this care were reviewed with

Yvonne Franklin
and their verbal consent has been given to deliver this visit.
This visit was conducted real time via synchronous interactive video & audio conferencing technology utilizing a HIPAA compliant platform. Patient
is located in their home
in the state of Washington.
Leilani D Paras, MD
is located

remotely in home office
, and is licensed in the state of Washington.
Discussed with patient/parent: You have chosen to receive care through the use of telemedicine.

Telemedicine enables health care providers at different locations to provide safe, effective, and convenient care through the use of technology.
As with any health care service, there are risks associated with the use of telemedicine, including equipment failure, poor image resolution, and information security issues.
You also understand that I cannot physically examine you and that you may need to come to clinic to complete the assessment.
I have discussed the benefits of MyChart. Patient
is already signed up for MyChart.
Patient Verifier :
Yvonne Franklin
,
6/17/1979
Patient is accompanied by

her
self in the video visit.
Do you consent to the use of telemedicine in your medical care today?
Yes
Patient/parent verbally understands the risks and benefits of telemedicine as explained.
All questions regarding telemedicine answered.
Preferred phone number to contact patient is :
360-201-2728
Is it okay to leave a detailed voicemail on this number?
Yes

Video Visit. Follow-up on menstrual cycle.
HPI:
History of Present Illness
The patient is a 46-year-old female who is seen via video visit
for follow-up of menorrhagia and recent neck pain.
Menorrhagia
- Since August 2025, menstrual cycles occur every 3 weeks, with 1 week of heavy bleeding followed by 1 week of brown discharge, persisting for 9 months.
- Fatigue is attributed to prolonged bleeding and frequent menstrual product use.
- The most recent period began last Thursday

(5/7/26)

and is ongoing, with an expected 5 days of brown discharge to follow.
- Brown discharge at the end of the cycle is a new symptom.
- An intrauterine device was placed in August 2025;
she is considering removal in September 2026 if no improvement in symptoms
- She does not use iron supplements but takes vitamin D and B12.
- She previously tolerated birth control pills.
- There is no personal or family history of blood clotting disorders.
- She is interested in further hormonal testing, including holistic options, but has concerns about some hormone therapies.
-She was previously seen for this on 1/14/26
-Bloodwork at the time was negative except for FSH elevated at 30.2

-Pelvic ultrasound was ordered - she has not yet scheduled it
Right sided thoracic back pain since 2/14/26
- Evaluated by physical medicine and rehabilitation
5/11/26
- Cervical etiology is suspected based on x-rays from 05/11/2026.
- Gabapentin and meloxicam were prescribed and are pending pharmacy fulfillment.
GYNECOLOGICAL HISTORY:
- Last menstrual period:
5/7/26
- Cycle length: 3 weeks

- Duration: 10-14 days
- Heavy bleeding for 1 week, followed by 1 week of brown discharge
. Then no bleeding x 1 week and then she restarts cycle with heavy bleeding
She does not use tobacco.
FAMILY HISTORY
She does not have a family history of blood clotting disorders.
Problem list, medical/surgical history, medications, allergies, immunizations, social and family history reviewed and appropriately updated in Epic.

Judgment: Judgment normal.
Assessment and Plan:
ICD-10-CM
1.
Menorrhagia with regular cycle
N92.0
Norethin Ace-Eth Estradiol-FE (LOESTRIN FE) 1-20 MG-MCG tablet (28 tab pack)
2.
Chronic right-sided thoracic back pain

M54.6
Seeing PM+R. Thought to be cervical in origin.
G89.29
since 2/14/26.
Assessment & Plan
Menorrhagia
- Periods every 3 weeks with heavy bleeding and brown discharge
- Labs reviewed: thyroid, CBC, ferritin, iron, B12, vitamin D, estrogen, FSH
- Discussed risks and benefits of birth control pills
- Provided information about low-dose estrogen and possible side effects

- Pelvic ultrasound ordered to assess uterine structure before starting birth control pills
- Prescribe Loestrin 1/20 FE:
- Start after ultrasound or sooner if desired
- Start with taking active pills x 3wks, 1 week off and then restart
- If doing well on OCP with improvement in symptoms, she can space out menses to q3 mos
- Provide 84 tablets with three refills for one year
Follow-up:
- Follow up
via MyChart message to review pelvic ultrasound report
- Return to clinic / call in the meantime if symptoms increase/change

- Discussed / reviewed indications, risks, benefits, side effects, and proper use of med(s) given today. Questions / concerns re: medication(s) addressed.
- Patient expressed understanding and agreement with above treatment plan.

Make Me the Author Attestation: Preliminary History Recorded by Clinical Staff
Preliminary information is recorded by Clinical Staff.
Recorded information was reviewed for accuracy and edited by
Leilani D Paras, MD
, who also personally confirmed the chief complaint with patient and completed HPI.

E/M code was selected based on 30 minutes spent on the date of encounter reviewing pertinent history and previous diagnostics, performing medically appropriate examination and evaluation, ordering diagnostic tests and/or medications, counseling and education to patient/family/caregiver. This excludes activities performed by clinical staff.

For G2211, Patient chronically managed by me for ongoing care related to this patient's single, serious, or complex condition; I will follow/have followed the patient longitudinally for this condition

Subjective:
Chief Complaint
Patient presents with
•
Imaging Test
Patient is here following up on imaging from MR THORACIC SPINE WITHOUT CONTRAST 7/9/2026.
History of Present Illness
The patient is a 47-year-old female presenting for follow-up after recent MRI and ongoing evaluation of back pain, possible malignancy, and other chronic health concerns.
Thoracic Spine Fractures and Back Pain
- Recent MRI revealed multiple thoracic spine fractures.

- Patient reports a skiing fall in 02/2026, landing on her back, but fracture locations suggest a non-traumatic etiology.
- She experiences persistent localized pain, more pronounced on one side, and neck stiffness.
- Over-the-counter 5% lidocaine cream was ineffective.
- Previously tried Percocet but could not tolerate it.
- Has used ibuprofen 600 mg twice daily for 5 months, but is concerned about worsening her chronic stomach issues.
- Requests referral to a thoracic spine specialist (Dr. Ash Patel at Proliance Orthopedics and Sports Medicine) and UW oncology
.
- CT
chest AP scan is scheduled Monday 9am

.
Anxiety and Sleep Disturbances
- Reports significant anxiety and sleep disturbances due to diagnostic uncertainty.
- Previously used Xanax for anxiety but no longer has access and requests a refill.
- Sleep is impaired by pain and anxiety.
Additional Information
- Appetite is generally good, but she notes decreased interest in eating due to stress.
- Currently takes omega-3, vitamin C, and vitamin D supplements.
- Blood work in 01/2026 was normal.

Assessment and Plan:
Assessment & Plan
Pathological fracture of vertebra, unspecified pathological cause, initial encounter
- Discussed risks and possible causes, including metastatic cancer
- Reviewed signs of spinal cord compression and need for urgent care

- Advised to avoid high-impact activities
- CT scan of chest, abdomen, and pelvis
pending
- Refer to medical oncology for urgent evaluation
- Refer to thoracic spine specialist for further assessment

Orders:
• REFERRAL / CONSULT TO ORTHOPEDICS (NOT SPINE SURGERY) EXTERNAL ONLY
• REFERRAL / CONSULT TO ONCOLOGY
Lytic bone lesions on xray
- Multiple vertebral fractures present, not typical for age or trauma history
- Discussed signs and symptoms of spinal cord compression
- Reviewed importance of urgent evaluation and follow-up
- Refer to medical oncology
- Refer to thoracic spine specialist
Orders:

• Lidocaine 7.5 % cream; Apply 1 gram topically 2 times daily.
• REFERRAL / CONSULT TO ORTHOPEDICS (NOT SPINE SURGERY) EXTERNAL ONLY
• REFERRAL / CONSULT TO ONCOLOGY
Generalized anxiety disorder
- Patient experiencing significant anxiety and difficulty sleeping
- Discussed risks and benefits of anxiety medications
- Reviewed importance of support system and communication with family
- Prescribe citalopram for ongoing anxiety
- Prescribe Xanax for acute anxiety episodes, use sparingly
Orders:

• citalopram (Celexa) 20 MG tab; Take 1 tablet by mouth daily.
• ALPRAZolam (Xanax) 0.25 MG tab; Take 1 tablet by mouth at bedtime as needed.
Mild intermittent asthma without complication
Refilled

Tamara C, MA

July 14 2026 / Jul / 14 / 2026 | Procedure visit / Ana Huston, ARNP / Optum-Eastside Family Medicine

Progress Notes by Tam C, MA at 7/14/2026 8:29 AM

Subjective:
This patient is unaccompanied in the exam room.
Yvonne Franklin
has provided verbal consent for the use of DAX during today's office visit. Three identifiers (
Yvonne Franklin
,
6/17/1979
,
360-201-2728
) have been used to identify the patient.

Yvonne
is a
47 y.o.
female
who presents for:
Chief Complaint
Patient presents with
•
IUD Removal
Patient is still bleeding since 6/23/2026

Concerns:
History of Present Illness
The patient presented today with concerns related to her intrauterine device (IUD) and ongoing gynecological symptoms.
IUD Removal
- The patient requested removal of her Mirena IUD, which was placed approximately one year ago.
Vaginal Bleeding
- She reported experiencing intermittent vaginal bleeding since her last menstrual period, which began on

06/23/2026.
Cancer Evaluation
- The patient is currently undergoing evaluation for cancer of unknown primary.
- She inquired about the possibility of having an endometrial biopsy performed at the same time as the IUD removal.
- After discussion with Dr.
Egnal and Dr. Paras
, the plan is to proceed with IUD removal today and defer the biopsy until after a pelvic ultrasound is completed.
- The patient has an appointment with her primary care provider in the next couple of hours and intends to keep that appointment.
Current pharmacy: Safeway Kirkland

or sooner for any new or worsening symptoms or concerns.

- Patient reminded about overdue HM and the importance of annual preventative care appointments.

- Discussed with patient (and guardian/parent if applicable) treatment recommendations, any medication information (including risk and benefits of antibiotics/medications if prescribed), strict return precautions given, and when to seek immediate medical attention. Additionally AVS printed for patient unless patient declined.

- The concerns and questions of the patient (and guardian/parent if applicable) were addressed. The patient (and guardian/parent if applicable) verbally demonstrated understanding of and agreement with the plan.

Results
Discuss CT scan 07/13/2026
History of Present Illness:
Yvonne is here for follow-up on imaging
Briefly, 7/1/2026 MRI thoracic spine (done for thoracic back pain) showed:
- Bone cyst like lesions on multiple vertebral body levels with appearance highly concerning for metastases from unknown primary

- Ovoid hyperintense mass in posterior right liver lobe
- Compression deformities at multiple thoracic vertebral bodies, noted to be possibly pathologic
- Recommended CT chest abdomen and pelvis with contrast or PET/CT for further evaluation
7/13/2026 CT abdomen/pelvis with contrast:

Diffuse lytic bone lesions throughout the spine and pelvis without CT evidence of primary malignancy in the abdomen or pelvis. Small bilateral ovarian cysts would be better characterized on transvaginal ultrasound.
7/13/2026 CT chest with contrast:
*
Multiple osseous lytic lesions, as described, concerning for a neoplastic process.
*
Fracture of the left 11th rib.
*
A few scattered nodules, measuring up to 4 mm. In the context of a potential primary malignancy, a follow-up CT of the chest in 3 months is advised.
They recommended diagnostic mammogram and breast ultrasound
Ordered 7/13/26 STAT

Screening:
- last pap 5/26/21 -NILM, HPV neg (due 2026)
- last mammogram and ultrasound 4/10/25 - negative (Evergreen)
- last colonoscopy 10/18/21 - cleared x 5 yrs (Dr. Selinger) - due 10/2026
Complete physical exam scheduled for 9/2026
The patient is scheduled for evaluation at the oncology undiagnosed clinic at Fred Hutch. She is trying to get an appointment wiith neurosurgery at Fred Hutch. She expresses significant anxiety regarding diagnostic uncertainty and is actively coordinating her care.
Pain management.
- She uses NSAIDs, lidocaine, ibuprofen, and Tylenol for pain, but reports significant discomfort and seeks additional relief.
- Given prescription for topical lidocaine 10% patches by another provider. Patient reports that her pharmacy cannot get the 10% lidocaine patch.
- We discussed other options for pain, as her bone pain is significant

M84.48XA
US PELVIS COMPLETE WITH TRANSVAGINAL
MG DIAGNOSTIC BILATERAL MAMMOGRAM TOMOSYNTHESIS

ULTRASOUND BREAST
Assessment & Plan
Neoplasm of uncertain origin
- Multiple lytic bone lesions identified on MRI and CT
- No primary malignancy found
- Diagnostic bilateral mammogram ordered stat
- Transvaginal pelvic ultrasound ordered
- Discussed
endometrial
biopsy risks and low yield if endometrial area is clear

- Emphasized hydration and nutrition before undiagnosed clinic appointment
- Oncology follow-up scheduled for 07/15/2026 at undiagnosed clinic
- Will be scheduling consult with neurosurgeon
Pathologic fracture of left 11th rib
- Fracture with pain on imaging
- Imaging records reviewed
- Discussed pain management and addiction risks with narcotics
- Instructed not to drive while taking Tylenol with codeine
- Prescribed Tylenol with codeine every 6 hours as needed
- She will let us know if this does not give her adequate pain control

Pulmonary nodules
- Scattered lung nodules up to 4 mm on CT
- No evidence of primary malignancy
- CT chest reviewed
- Discussed monitoring protocol and importance of repeat imaging in 3 months
- Repeat CT chest in 3 months
- We discussed this repeat CT chest will likely be done at Fred Hutch with oncology
Follow up
- She has appointment scheduled for oncology tomorrow
- We discussed that they will be taking over her care, and I will follow along.

- Discussed / reviewed indications, risks, benefits, side effects, and proper use of med(s) given today. Questions / concerns re: medication(s) addressed.
- PDMP reviewed and consistent
- Patient expressed understanding and agreement with above treatment plan.
Make Me the Author Attestation: Preliminary History Recorded by Clinical Staff
Preliminary information is recorded by Clinical Staff.
Recorded information was reviewed for accuracy and edited by

Leilani D Paras, MD
, who also personally confirmed the chief complaint with patient and completed HPI.
Voice recognition technology may have been employed in the creation of this record.
E/M code was selected based on

35

minutes spent on the date of encounter reviewing pertinent history and previous diagnostics, performing medically appropriate examination and evaluation, ordering diagnostic tests and/or medications, counseling and education to patient/family/caregiver. This is excludes activities performed by clinical staff.

For G2211, Patient chronically managed by me for ongoing care related to this patient's single, serious, or complex condition; I will follow/have followed the patient longitudinally for this condition
There are no Patient Instructions on file for this visit.

XR RIBS UNILATERAL RIGHT 2V (XR RIBS RIGHT) - Final result (02/26/2026 8:42 AM PST)

Anatomical Region	Laterality	Modality
Ribs		Computed Radiography

Specimen (Source)	Anatomical Location / Laterality	Collection Method / Volume	Collection Time	Received Time
			02/26/2026 8:07 AM PST	

Narrative

02/26/2026 9:15 AM PST
CLINICAL INDICATION: right upper back pain after trauma

PROCEDURE: XR RIBS RIGHT

COMPARISONS: Rib x-ray the same date.

DATE: 2/26/2026 8:07 AM

FINDINGS:
Visualized ribs are intact. No displaced fracture.

IMPRESSION:
Negative rib series.

Exam interpreted by Radia.

Procedure Note

Narrative

```
CLINICAL INDICATION:  upper back pain with inspiration

PROCEDURE:  XR CHEST 2V

COMPARISONS: Rib x-ray the same date.

DATE:  2/26/2026 8:06 AM

FINDINGS:
Heart size is normal. Mediastinum is unremarkable.
Lungs appear clear.
No pleural effusion is present.
Healed left lateral ninth rib fracture is present.

IMPRESSION:
Healed left lateral no fracture.
Otherwise normal chest.
No pneumothorax.

Exam interpreted by Radia.
```

COMPREHENSIVE METABOLIC PANEL - Final result (07/18/2025 9:19 AM PDT)

Component	Value	Ref Range	Test Method	Analysis Time	Performed At	Pathologist Signature
Glucose	93	65 - 99 mg/dL			OCWA FORMERLY THE EVERETT CLINIC	
BUN	16	8 - 23 mg/dL			OCWA FORMERLY THE EVERETT CLINIC	
Creatinine	0.62	0.44 - 1.03 mg/dL			OCWA FORMERLY THE EVERETT CLINIC	
Sodium	140	135 - 148 mEq/L			OCWA FORMERLY THE EVERETT CLINIC	
Potassium	4.3	3.5 - 5.3 mEq/L			OCWA FORMERLY THE EVERETT CLINIC	
Chloride	104	98 - 111 mEq/L			OCWA FORMERLY THE EVERETT CLINIC	
CO2	32	22 - 33 mEq/L			OCWA FORMERLY THE EVERETT CLINIC	

Component	Value	Ref Range	Test Method	Analysis Time	Performed At	Pathologist Signature
Total Protein	6.8	6.0 - 8.0 g/dL			OCWA FORMERLY THE EVERETT CLINIC	
Albumin	4.6	3.4 - 4.8 g/dL			OCWA FORMERLY THE EVERETT CLINIC	
Calcium	9.3	8.5 - 10.3 mg/dL			OCWA FORMERLY THE EVERETT CLINIC	
AST (SGOT)	14	5 - 33 U/L			OCWA FORMERLY THE EVERETT CLINIC	
Alkaline Phosphatase	41	30 - 120 U/L			OCWA FORMERLY THE EVERETT CLINIC	
Bilirubin Total	1.3	0.2 - 1.3 mg/dL			OCWA FORMERLY THE EVERETT CLINIC	
ALT (SGPT)	17	6 - 44 U/L			OCWA FORMERLY THE EVERETT CLINIC	
eGFR	111	>=60 mL/min / 1.73m Squared			OCWA FORMERLY THE EVERETT CLINIC	

Comment:
eGFR is calculated using the 2021 CKD-EPI equation, as recommended by the National Kidney Foundation-American Society of Nephrology Task Force.
Compared to previously used equations for eGFR, the 2021 CKD-EPI equation may overestimate eGFR in non-black patients and underestimate eGFR in black patients. Consider further workup and/or Nephrology referral for eGFR consistently less than 45 mL/min/1.73m2 on two or more measurements.

25 OH VITAMIN D - Final result (07/17/2024 12:51 PM PDT)

Component	Value	Ref Range	Test Method	Analysis Time	Performed At	Pathologist Signature
25 OH Vitamin D	23.6	30.0 - 100.0 ng/mL			OCWA FORMERLY THE EVERETT CLINIC	

Comment:

```
INTERPRETIVE guidelines for Vitamin D (25-hydroxy)

    Deficiency              < 10 ng/mL
    Insufficiency         10- 29 ng/mL
    Sufficient/Optimal    30-100 ng/mL
    Toxicity               > 100 ng/mL

NOTE: A pediatric Reference range has not been established
by Diasorin using this kit.  Ranges observed in selected
populations vary considerably and a significant proportion
of asymptomatic persons, particularly elderly and those with
limited sun exposure will have Vitamin D insufficiency
associated with elevated intact parathyroid hormone levels
and elevated risk of osteoporosis.  Serum levels above
30 ng/mL have been recommended for optimizing bone health
whereas levels below 10 ng/mL are associated with a
significant risk of osteomalacia.
```

Bilirubin Total	1.9	0.2 - 1.3 mg/dL			OCWA FORMERLY THE EVERETT CLINIC	
ALT (SGPT)	15	6 - 44 U/L			OCWA FORMERLY THE EVERETT CLINIC	
eGFR	111	>=60 mL/min / 1.73m Squared			OCWA FORMERLY THE EVERETT CLINIC	

Component	Value	Ref Range	Test Method	Analysis Time	Performed At	Pathologist Signature

Comment:
eGFR is calculated using the 2021 CKD-EPI equation, as recommended by the National Kidney Foundation-American Society of Nephrology Task Force.
Compared to previously used equations for eGFR, the 2021 CKD-EPI equation may overestimate eGFR in non-black patients and underestimate eGFR in black patients. Consider further workup and/or Nephrology referral for eGFR consistently less than 45 mL/min/1.73m2 on two or more measurements.

COVID-19 (POINT OF CARE) NAAT - Final result (01/10/2024 11:23 AM PST)

Component	Value	Ref Range	Test Method	Analysis Time	Performed At	Pathologist Signature
COVID-19 (Point of Care) NAAT	Not Detected	Not Detected			THE EVERETT CLINIC	

Comment:
Negative results do not preclude SARS-CoV-2 infection and should not be used as the sole basis for patient management decisions. Negative results must be combined with clinical observations, patient history and epidemiological information.

The Abbott ID NOW point-of-care assay is a real-time isothermal nucleic acid amplification test intended for the qualitative detection of nucleic acid from the SARS-CoV-2 in respiratory swabs from suspected infected patients. This test has not been FDA cleared or approved. This test has been authorized by the FDA under an Emergency Use Authorization (EUA) and can only be used in that capacity.

Is the patient symptomatic?	Yes				THE EVERETT CLINIC	
If symptomatic, date of onset	20240108				THE EVERETT CLINIC	
Is the PT employed in Healthcare?	Unknown				THE EVERETT CLINIC	
Is the PT pregnant?	Unknown				THE EVERETT CLINIC

25 OH VITAMIN D - Final result (02/15/2023 9:58 AM PST)

Component	Value	Ref Range	Test Method	Analysis Time	Performed At	Pathologist Signature
25 OH Vitamin D	45.0	30.0 - 100.0 ng/mL			THE EVERETT CLINIC	

Comment:

```
INTERPRETIVE guidelines for Vitamin D (25-hydroxy)

    Deficiency              < 10 ng/mL
    Insufficiency         10- 29 ng/mL
    Sufficient/Optimal    30-100 ng/mL
    Toxicity               > 100 ng/mL

NOTE: A pediatric Reference range has not been established
by Diasorin using this kit.  Ranges observed in selected
populations vary considerably and a significant proportion
of asymptomatic persons, particularly elderly and those with
limited sun exposure will have Vitamin D insufficiency
associated with elevated intact parathyroid hormone levels
and elevated risk of osteoporosis.  Serum levels above
30 ng/mL have been recommended for optimizing bone health
whereas levels below 10 ng/mL are associated with a
significant risk of osteomalacia.
```

25 OH VITAMIN D - Final result (05/26/2021 9:43 AM PDT)

Component	Value	Ref Range	Test Method	Analysis Time	Performed At	Pathologist Signature
25 OH Vitamin D	16.6	30.0 - 100.0 ng/mL			THE EVERETT CLINIC	

Comment:

```
INTERPRETIVE guidelines for Vitamin D (25-hydroxy)

    Deficiency             < 10 ng/mL
    Insufficiency        10- 29 ng/mL
    Sufficient/Optimal   30-100 ng/mL
    Toxicity              > 100 ng/mL

NOTE: A pediatric Reference range has not been established
by Diasorin using this kit.  Ranges observed in selected
populations vary considerably and a significant proportion
of asymptomatic persons, particularly elderly and those with
limited sun exposure will have Vitamin D insufficiency
associated with elevated intact parathyroid hormone levels
and elevated risk of osteoporosis.  Serum levels above
30 ng/mL have been recommended for optimizing bone health
whereas levels below 10 ng/mL are associated with a
significant risk of osteomalacia.
```

CO2	26	22 - 33 mEq/L			THE EVERETT CLINIC	
Total Protein	7.6	6.0 - 8.0 g/dL			THE EVERETT CLINIC	
Albumin	4.8	3.4 - 4.8 g/dL			THE EVERETT CLINIC	
A/G Ratio	1.71	1.00 - 2.00			THE EVERETT CLINIC	
Calcium	9.2	8.5 - 10.3 mg/dL			THE EVERETT CLINIC	
AST (SGOT)	16	5 - 33 U/L			THE EVERETT CLINIC	
Alkaline Phosphatase	33	30 - 120 U/L			THE EVERETT CLINIC	
Bilirubin Total	1.5	0.2 - 1.3 mg/dL			THE EVERETT CLINIC	
ALT (SGPT)	17	6 - 44 U/L			THE EVERETT CLINIC	
GFR	>60	>=60 mL/min / 1.73m Squared			THE EVERETT CLINIC	

Comment:

```
-The calculated GFR result is based on the MDRD equation which is
not directly comparable to the creatinine clearance
estimation from other equations (such as the Cockcroft-Gault).
-For African Americans, multiply the calculated GFR by 1.21
-For age > 70, consider 24 hour urine creatinine clearance
to improve accuracy for GFR estimation.

Staging of Chronic Kidney Disease (CKD)

CKD  I      GFR>=60 with kidney damage, normal
                 serum creatinine
CKD  II     GFR>60 with kidney damage, abnormal
                 serum creatinine or creatinine clearance
CKD  III    GFR 30-59, consider nephrology consult
CKD  IV     GFR 15-29
CKD  V      GFR <15

Definition of kidney damage
1. 2 abnormal MAU/Cr >30 mg/g results over a 90 day period.
2. 2 abnormal protein/creatinine > 180mg/gram over
  a 90 day period.
3. 2 abnormal urine analysis: persistent proteinuria, RBC,
  WBC, casts in urine, excluding chronic UTI.
4. Abnormal kidney ultrasound or renal artery duplex
  (cysts, hydronephrosis, echogencity, nephrocalcinosis,
  atrophic or large kidneys, and renal artery stenosis)
```

PAP & HPV W/ REFLEX GENOTYPING (PAP W/HPV NILM REFLEX GENOTYPING 30-65YRS) - Final result (05/26/2021)

Specimen (Source)	Anatomical Location / Laterality	Collection Method / Volume	Collection Time	Received Time
Cervical			05/26/2021	05/27/2021

Impressions

CELLNETIX - 06/03/2021 10:16 PM PDT

Impressions

CASE: P21-057671
PATIENT: Yvonne Franklin

PAP INTERPRETATION:
NEGATIVE FOR INTRAEPITHELIAL LESION OR MALIGNANCY.

SPECIMEN ADEQUACY:
Satisfactory for evaluation. Endocervical/transformation zone component present.

NOTES:
ThinPrep specimen imaged successfully by automated locator device; field of view examination only. [ThinPrep Imager Duo. Hologic, Inc, Marlborough, MA]

MOLECULAR RESULTS
NEGATIVE for High Risk HPV.

This test is FDA-approved for the Roche Cobas 4800 platform using ThinPrep(TM) vials. HPV High Risk on SurePath(TM) vials and its performance characteristics were determined by the Molecular Pathology Laboratory, CellNetix Pathology Laboratories, 12501 E Marginal Way S, Ste 200, Tukwila WA 98168, using the Roche Cobas 4800 assay. This assay is a qualitative test that utilizes amplification of target DNA by Polymerase Chain Reaction (PCR) and nucleic acid hybridization for the detection of 14 HPV high risk types (16,18,31,33,35,39,45,51,52,56,58,59,66 and 68). This test is used for clinical purposes. This laboratory is regulated under the 1988 CLIA amendments as qualified to perform high-complexity clinical testing.

SPECIMEN DESCRIPTION: ThinPrep Imaged Liquid Pap Test
SPECIMEN SOURCE: Cervical
CLINICAL INFORMATION: Other: MIRENA IUD
DATE OF LAST MENSTRUAL PERIOD: Not given

Ann Campbell CT(ASCP). Electronically signed 06/03/2021 21:49 Performed at CellNetix Pathology, 1321 Colby Avenue, Everett , WA 98206, CLIA#: 50D0882761 Medical Director: Barry Kahn, MD

XR RIBS UNILATERAL RIGHT 2V (XR RIBS RIGHT) - Final result (02/26/2026 8:42 AM PST)

Anatomical Region	Laterality	Modality
Ribs		Computed Radiography

Specimen (Source)	Anatomical Location / Laterality	Collection Method / Volume	Collection Time	Received Time
			02/26/2026 8:07 AM PST	

Narrative

02/26/2026 9:15 AM PST
CLINICAL INDICATION: right upper back pain after trauma

PROCEDURE: XR RIBS RIGHT

COMPARISONS: Rib x-ray the same date.

DATE: 2/26/2026 8:07 AM

FINDINGS:
Visualized ribs are intact. No displaced fracture.

IMPRESSION:
Negative rib series.

Exam interpreted by Radia.

Procedure Note

JOHN EPHRON - 02/26/2026

XR CHEST 2V - Final result (02/26/2026 8:42 AM PST)

Anatomical Region	Laterality	Modality
Chest		Computed Radiography

Specimen (Source)	Anatomical Location / Laterality	Collection Method / Volume	Collection Time	Received Time
			02/26/2026 8:06 AM PST	

Narrative

02/26/2026 9:14 AM PST

Narrative

```
CLINICAL INDICATION:  upper back pain with inspiration

PROCEDURE:  XR CHEST 2V

COMPARISONS: Rib x-ray the same date.

DATE:  2/26/2026 8:06 AM

FINDINGS:
Heart size is normal. Mediastinum is unremarkable.
Lungs appear clear.
No pleural effusion is present.
Healed left lateral ninth rib fracture is present.

IMPRESSION:
Healed left lateral no fracture.
Otherwise normal chest.
No pneumothorax.

Exam interpreted by Radia.
```

25 OH VITAMIN D - Final result (07/18/2025 9:19 AM PDT)

Component	Value	Ref Range	Test Method	Analysis Time	Performed At	Pathologist Signature
25 OH Vitamin D	40.4	30.0 - 60.0 ng/mL			OCWA FORMERLY THE EVERETT CLINIC	

Comment:
Serum 25-OH Vit D levels of 20-30 ng/ml may be reasonable for some people without risk factors for metabolic bone disease. Levels > 60 ng/mL may be associated with adverse health outcomes.

Alkaline Phosphatase	41	30 - 120 U/L			OCWA FORMERLY THE EVERETT CLINIC	
Bilirubin Total	1.3	0.2 - 1.3 mg/dL			OCWA FORMERLY THE EVERETT CLINIC	
ALT (SGPT)	17	6 - 44 U/L			OCWA FORMERLY THE EVERETT CLINIC	
eGFR	111	>=60 mL/min / 1.73m Squared			OCWA FORMERLY THE EVERETT CLINIC	

Comment:
eGFR is calculated using the 2021 CKD-EPI equation, as recommended by the National Kidney Foundation-American Society of Nephrology Task Force.
Compared to previously used equations for eGFR, the 2021 CKD-EPI equation may overestimate eGFR in non-black patients and underestimate eGFR in black patients. Consider further workup and/or Nephrology referral for eGFR consistently less than 45 mL/min/1.73m2 on two or more measurements.

25 OH VITAMIN D - Final result (07/17/2024 12:51 PM PDT)

Component	Value	Ref Range	Test Method	Analysis Time	Performed At	Pathologist Signature
25 OH Vitamin D	23.6	30.0 - 100.0 ng/mL			OCWA FORMERLY THE EVERETT CLINIC	

Comment:

```
INTERPRETIVE guidelines for Vitamin D (25-hydroxy)

    Deficiency              < 10 ng/mL
    Insufficiency         10- 29 ng/mL
    Sufficient/Optimal    30-100 ng/mL
    Toxicity               > 100 ng/mL

NOTE: A pediatric Reference range has not been established
by Diasorin using this kit.  Ranges observed in selected
populations vary considerably and a significant proportion
of asymptomatic persons, particularly elderly and those with
limited sun exposure will have Vitamin D insufficiency
associated with elevated intact parathyroid hormone levels
and elevated risk of osteoporosis.  Serum levels above
30 ng/mL have been recommended for optimizing bone health
whereas levels below 10 ng/mL are associated with a
significant risk of osteomalacia.

COVID-19 (POINT OF CARE) NAAT - Final result (01/10/2024 11:23 AM PST)

Component	Value	Ref Range	Test Method	Analysis Time	Performed At	Pathologist Signature
COVID-19 (Point of Care) NAAT	Not Detected	Not Detected			THE EVERETT CLINIC	

Comment:
Negative results do not preclude SARS-CoV-2 infection and should not be used as the sole basis for patient management decisions. Negative results must be combined with clinical observations, patient history and epidemiological information.

The Abbott ID NOW point-of-care assay is a real-time isothermal nucleic acid amplification test intended for the qualitative detection of nucleic acid from the SARS-CoV-2 in respiratory swabs from suspected infected patients. This test has not been FDA cleared or approved. This test has been authorized by the FDA under an Emergency Use Authorization (EUA) and can only be used in that capacity.

Is the patient symptomatic?	Yes				THE EVERETT CLINIC	
If symptomatic, date of onset	20240108				THE EVERETT CLINIC	
Is the PT employed in Healthcare?	Unknown				THE EVERETT CLINIC	
Is the PT pregnant?	Unknown				THE EVERETT CLINIC

Chloride	100	98 - 111 mEq/L			THE EVERETT CLINIC	
CO2	28	22 - 33 mEq/L			THE EVERETT CLINIC	
Total Protein	7.4	6.0 - 8.0 g/dL			THE EVERETT CLINIC	
Albumin	4.4	3.4 - 4.8 g/dL			THE EVERETT CLINIC	

Component	Value	Ref Range	Test Method	Analysis Time	Performed At	Pathologist Signature
A/G Ratio	1.47	1.00 - 2.00			THE EVERETT CLINIC	
Calcium	9.0	8.5 - 10.3 mg/dL			THE EVERETT CLINIC	
AST (SGOT)	18	5 - 33 U/L			THE EVERETT CLINIC	
Alkaline Phosphatase	35	30 - 120 U/L			THE EVERETT CLINIC	
Bilirubin Total	1.6	0.2 - 1.3 mg/dL			THE EVERETT CLINIC	
ALT (SGPT)	16	6 - 44 U/L			THE EVERETT CLINIC	
GFR	>60	>=60 mL/min / 1.73m Squared			THE EVERETT CLINIC	

Comment:

```
The calculated GFR result is based on the MDRD equation which is
not directly comparable to the creatinine clearance
estimation from other equations (such as the Cockcroft-Gault).

For African Americans, multiply the calculated GFR by 1.21.
```

25 OH VITAMIN D - Final result (05/26/2021 9:43 AM PDT)

Component	Value	Ref Range	Test Method	Analysis Time	Performed At	Pathologist Signature
25 OH Vitamin D	16.6	30.0 - 100.0 ng/mL			THE EVERETT CLINIC	

Comment:

```
INTERPRETIVE guidelines for Vitamin D (25-hydroxy)

    Deficiency             < 10 ng/mL
    Insufficiency        10- 29 ng/mL
    Sufficient/Optimal   30-100 ng/mL
    Toxicity              > 100 ng/mL

NOTE: A pediatric Reference range has not been established
by Diasorin using this kit.  Ranges observed in selected
populations vary considerably and a significant proportion
of asymptomatic persons, particularly elderly and those with
limited sun exposure will have Vitamin D insufficiency
associated with elevated intact parathyroid hormone levels
and elevated risk of osteoporosis.  Serum levels above
30 ng/mL have been recommended for optimizing bone health
whereas levels below 10 ng/mL are associated with a
significant risk of osteomalacia.
```

Impressions

CELLNETIX - 06/03/2021 10:16 PM PDT

Impressions

CASE: P21-057671
PATIENT: Yvonne Franklin

PAP INTERPRETATION:
NEGATIVE FOR INTRAEPITHELIAL LESION OR MALIGNANCY.

SPECIMEN ADEQUACY:
Satisfactory for evaluation. Endocervical/transformation zone component present.

NOTES:
ThinPrep specimen imaged successfully by automated locator device; field of view examination only. [ThinPrep Imager Duo. Hologic, Inc, Marlborough, MA]

MOLECULAR RESULTS
NEGATIVE for High Risk HPV.

This test is FDA-approved for the Roche Cobas 4800 platform using ThinPrep(TM) vials. HPV High Risk on SurePath(TM) vials and its performance characteristics were determined by the Molecular Pathology Laboratory, CellNetix Pathology Laboratories, 12501 E Marginal Way S, Ste 200, Tukwila WA 98168, using the Roche Cobas 4800 assay. This assay is a qualitative test that utilizes amplification of target DNA by Polymerase Chain Reaction (PCR) and nucleic acid hybridization for the detection of 14 HPV high risk types (16,18,31,33,35,39,45,51,52,56,58,59,66 and 68). This test is used for clinical purposes. This laboratory is regulated under the 1988 CLIA amendments as qualified to perform high-complexity clinical testing.

SPECIMEN DESCRIPTION: ThinPrep Imaged Liquid Pap Test
SPECIMEN SOURCE: Cervical
CLINICAL INFORMATION: Other: MIRENA IUD
DATE OF LAST MENSTRUAL PERIOD: Not given

Ann Campbell CT(ASCP). Electronically signed 06/03/2021 21:49 Performed at CellNetix Pathology, 1321 Colby Avenue, Everett , WA 98206, CLIA#: 50D0882761 Medical Director: Barry Kahn, MD

Miscellaneous Notes - documented in this encounter

Telephone Encounter - Melissa F - 07/30/2026 2:11 PM PDT

Formatting of this note might be different from the original.

Faxed on 7/30/26

Electronically signed by Melissa F at 07/30/2026 2:11 PM PDT

Telephone Encounter - Jocelyn P, MA - 07/30/2026 11:19 AM PDT

Formatting of this note might be different from the original.

Spoke with patient advised:

the alprazolam and morphine are both sedating so should not be taken together and they should not be taken with other sedating substance (like alcohol).

Patient verbalized understanding. No other questions.

Form picked up by front desk

Electronically signed by Jocelyn P, MA at 07/30/2026 11:47 AM PDT

Telephone Encounter - Leilani Paras, MD - 07/29/2026 5:06 PM PDT

Formatting of this note might be different from the original.

Please let patient know that we received a note about her having both alprazolam and morphine. Please confirm morphine is being prescribed at Fred Hutch.

I know she knows this, but please confirm she knows to NOT take any sedating medications or substances together - the alprazolam and morphine are both sedating so should not be taken together and they should not be taken with other sedating substance (like alcohol).

Will leave form in my inbox, which I've completed. Please fax back in after we've discussed with pt. Thanks

Electronically signed by Leilani Paras, MD at 07/29/2026 5:09 PM PDT
Electronically signed by Leilani Paras, MD at 07/29/2026 5:10 PM PDT

Telephone Encounter - Jocelyn P, MA - 07/29/2026 4:48 PM PDT

Formatting of this note might be different from the original.

Prescriber Response form, printed and placed at PCP's inbox for review and signature

Morphine is not listed on patient's med list, nor from the reconciliation list.

Tried to reach patient to confirm medication, if prescribed by outside doctor.

Left voice message to call back.

Miscellaneous Notes - documented in this encounter

Telephone Encounter - Diana T - 08/13/2026 8:37 AM PDT

Formatting of this note might be different from the original.

Will hold the CD in the front desk pick up file for 30 days and then we will mail it to the patient.

Electronically signed by Diana T at 08/13/2026 8:38 AM PDT

Telephone Encounter - Francis T, MA - 07/21/2026 8:21 AM PDT

Formatting of this note might be different from the original.

MyChart message sent.

Electronically signed by Francis T, MA at 07/21/2026 8:22 AM PDT

Telephone Encounter - Leilani Paras, MD - 07/21/2026 7:00 AM PDT

Formatting of this note might be different from the original.

We received her images in CD from UW. Please tell her we cannot keep these, since we don't have any computers to read them anymore. Please ask if she would like us to mail them to her or pick it up from front desk. Will place CD in my outbox. Thanks

Electronically signed by Leilani Paras, MD at 07/21/2026 7:01 AM PDT

Miscellaneous Notes - documented in this encounter

Telephone Encounter - Leilani Paras, MD - 07/15/2026 3:44 PM PDT

Formatting of this note might be different from the original.

Spoke with patient to discuss where she would like her mammogram done.
She states she had diagnostic mammogram and ultrasound this AM. (She had taken written and signed orders from our appointment yesterday).

She reported that mammogram showed L breast mass and enlarged lymph nodes on right. They have breast biopsy and lymph node biopsy scheduled for next Wednesday.

She has appointment with oncologist on Fred Hutch today at 430.

No further need for mammogram or ultrasound orders. Closing TE

Electronically signed by Leilani Paras, MD at 07/15/2026 3:50 PM PDT

Telephone Encounter - Judith L, CMA - 07/15/2026 11:37 AM PDT

Formatting of this note might be different from the original.

Fred Hutch mammogram order change needed printed and placed in your office inbox today.
JUDY LINDSTROM, CMA

I have pended order at Fred Hutch S Lake Union for you to sign.
Patient will need to be notified of location change.

Electronically signed by Judith L, CMA at 07/15/2026 11:44 AM PDT

Progress Notes - documented in this encounter

Tam C, MA - 07/14/2026 8:29 AM PDT

Formatting of this note might be different from the original.

[table#1]:
Subjective:
This patient is unaccompanied in the exam room.
Yvonne Franklin has provided verbal consent for the use of DAX during today's office visit. Three identifiers (Yvonne Franklin, 6/17/1979, 360-201-2728) have been used to identify the patient.

Yvonne is a 47 y.o. female who presents for:
[table#2]:
Chief Complaint
Patient presents with
•	IUD Removal
		*Patient is still bleeding since 6/23/2026 *

Concerns:

History of Present Illness
The patient presented today with concerns related to her intrauterine device (IUD) and ongoing gynecological symptoms.

IUD Removal
- The patient requested removal of her Mirena IUD, which was placed approximately one year ago.

Vaginal Bleeding
- She reported experiencing intermittent vaginal bleeding since her last menstrual period, which began on 06/23/2026.

Cancer Evaluation
- The patient is currently undergoing evaluation for cancer of unknown primary.

- She inquired about the possibility of having an endometrial biopsy performed at the same time as the IUD removal.
- After discussion with Dr. Egnal and Dr. Paras, the plan is to proceed with IUD removal today and defer the biopsy until after a pelvic ultrasound is completed.
- The patient has an appointment with her primary care provider in the next couple of hours and intends to keep that appointment.

[table#15]:

or sooner for any new or worsening symptoms or concerns.

- Patient reminded about overdue HM and the importance of annual preventative care appointments.

- Discussed with patient (and guardian/parent if applicable) treatment recommendations, any medication information (including risk and benefits of antibiotics/medications if prescribed), strict return precautions given, and when to seek immediate medical attention. Additionally AVS printed for patient unless patient declined.
- The concerns and questions of the patient (and guardian/parent if applicable) were addressed. The patient (and guardian/parent

if applicable) verbally demonstrated understanding of and agreement with the plan.

Make Me the Author Attestation: Preliminary History Recorded by Clinical Staff
Preliminary information is recorded by Clinical Staff.
Recorded information was reviewed for accuracy and edited by Ana Huston, ARNP, who also personally confirmed the chief complaint with patient and completed HPI.

acetaminophen-codeine (Tylenol #3) 300-30 MG tablet	Take 1 tablet by mouth every 6 hours as needed for pain. Max Daily Amount: 4 tablets Max 4,000 mg day acetaminophen all sources.	20 tablet			07/14/2026	07/19/2026

Progress Notes - documented in this encounter

Leilani Paras, MD - 07/14/2026 10:54 AM PDT

Formatting of this note might be different from the original.

Yvonne Franklin has provided verbal consent for the use of DAX during today's office visit. Three identifiers (Yvonne Franklin, 6/17/1979, 360-201-2728) have been used to identify the patient.

[table#1]:
Subjective:
This patient is accompanied in the exam room by her spouse, Mark.

Yvonne is a 47 y.o. female who presents for:

[table#2]:
Chief Complaint
Patient presents with
•	Results
		Discuss CT scan 07/13/2026

History of Present Illness:

Yvonne is here for follow-up on imaging

Briefly, 7/1/2026 MRI thoracic spine (done for thoracic back pain) showed:
- Bone cyst like lesions on multiple vertebral body levels with appearance highly concerning for metastases from unknown primary
- Ovoid hyperintense mass in posterior right liver lobe
- Compression deformities at multiple thoracic vertebral bodies, noted to be possibly pathologic
- Recommended CT chest abdomen and pelvis with contrast or PET/CT for further evaluation

7/13/2026 CT abdomen/pelvis with contrast:
Diffuse lytic bone lesions throughout the spine and pelvis without CT evidence of primary malignancy in the abdomen or pelvis. Small bilateral ovarian cysts would be better characterized on transvaginal ultrasound.

7/13/2026 CT chest with contrast:
* Multiple osseous lytic lesions, as described, concerning for a neoplastic process.
* Fracture of the left 11th rib.
* A few scattered nodules, measuring up to 4 mm. In the context of a potential primary malignancy, a follow-up CT of the chest in 3 months is advised.

They recommended diagnostic mammogram and breast ultrasound
Ordered 7/13/26 STAT

Screening:
- last pap 5/26/21 -NILM, HPV neg (due 2026)

- last mammogram and ultrasound 4/10/25 - negative (Evergreen)
- last colonoscopy 10/18/21 - cleared x 5 yrs (Dr. Selinger) - due 10/2026

Complete physical exam scheduled for 9/2026

The patient is scheduled for evaluation at the oncology undiagnosed clinic at Fred Hutch. She is trying to get an appointment wiith neurosurgery at Fred Hutch. She expresses significant anxiety regarding diagnostic uncertainty and is actively coordinating her care.

Pain management.
- She uses NSAIDs, lidocaine, ibuprofen, and Tylenol for pain, but reports significant discomfort and seeks additional relief.
- Given prescription for topical lidocaine 10% patches by another provider. Patient reports that her pharmacy cannot get the 10% lidocaine patch.
- We discussed other options for pain, as her bone pain is significant

Problem List

Review of Systems
Pertinent items are noted in HPI/associated Symptoms and otherwise, all other systems negative.

[table#3]:
Objective:

BP 120/78 | Pulse 82 | Temp 99 °F (37.2 °C) (Temporal) | Resp 16 | Ht 5' 4.5" (1.638 m) | Wt 125 lb (56.7 kg) | LMP 06/23/2026 | BMI 21.12 kg/m^2

Physical Exam
Vitals reviewed.
Constitutional:
General: She is not in acute distress.
Eyes:
Conjunctiva/sclera: Conjunctivae normal.
Neck:
Thyroid: No thyroid mass, thyromegaly or thyroid tenderness.
Cardiovascular:
Rate and Rhythm: Normal rate and regular rhythm.
Heart sounds: Normal heart sounds.
Pulmonary:
Effort: Pulmonary effort is normal.
Breath sounds: Normal breath sounds. No stridor. No wheezing, rhonchi or rales.
Chest:
Comments: **+TTP 11th rib**
Lymphadenopathy:
Cervical: No cervical adenopathy.
Upper Body:
Right upper body: No supraclavicular adenopathy.
Left upper body: No supraclavicular adenopathy.
Skin:
General: Skin is warm.
Capillary Refill: Capillary refill takes less than 2 seconds.
Neurological:
General: No focal deficit present.
Mental Status: She is alert and oriented to person, place, and time.
Psychiatric
:
Mood and Affect: Mood normal. Affect is tearful** (sometimes tearful when discussing her results)**.
Speech: Speech normal.
Behavior: Behavior normal. Behavior is cooperative.

?

			MG DIAGNOSTIC BILATERAL MAMMOGRAM TOMOSYNTHESIS
			ULTRASOUND BREAST

?
Assessment & Plan
Neoplasm of uncertain origin
- Multiple lytic bone lesions identified on MRI and CT
- No primary malignancy found
- Diagnostic bilateral mammogram ordered stat
- Transvaginal pelvic ultrasound ordered
- Discussed endometrial biopsy risks and low yield if endometrial area is clear
- Emphasized hydration and nutrition before undiagnosed clinic appointment
- Oncology follow-up scheduled for 07/15/2026 at undiagnosed clinic
- Will be scheduling consult with neurosurgeon

Pathologic fracture of left 11th rib
- Fracture with pain on imaging
- Imaging records reviewed
- Discussed pain management and addiction risks with narcotics
- Instructed not to drive while taking Tylenol with codeine
- Prescribed Tylenol with codeine every 6 hours as needed
- She will let us know if this does not give her adequate pain control

Pulmonary nodules
- Scattered lung nodules up to 4 mm on CT
- No evidence of primary malignancy
- CT chest reviewed
- Discussed monitoring protocol and importance of repeat imaging in 3 months
- Repeat CT chest in 3 months
- We discussed this repeat CT chest will likely be done at Fred Hutch with oncology

Follow up
- She has appointment scheduled for oncology tomorrow
- We discussed that they will be taking over her care, and I will follow along.
- Discussed / reviewed indications, risks, benefits, side effects, and proper use of med(s) given today. Questions / concerns re: medication(s) addressed.
- PDMP reviewed and consistent
- Patient expressed understanding and agreement with above treatment plan.

Make Me the Author Attestation: Preliminary History Recorded by Clinical Staff
Preliminary information is recorded by Clinical Staff.
Recorded information was reviewed for accuracy and edited by Leilani D Paras, MD, who also personally confirmed the chief complaint with patient and completed HPI.

Voice recognition technology may have been employed in the creation of this record.

E/M code was selected based on 35 minutes spent on the date of encounter reviewing pertinent history and previous diagnostics, performing medically appropriate examination and evaluation, ordering diagnostic tests and/or medications, counseling and education to patient/family/caregiver. This is excludes activities performed by clinical staff.
For G2211, Patient chronically managed by me for ongoing care related to this patient's single, serious, or complex condition; I will follow/have followed the patient longitudinally for this condition

There are no Patient Instructions on file for this visit.

Miscellaneous Notes - documented in this encounter

Telephone Encounter - Elena M, RN - 07/22/2026 8:10 AM PDT

Formatting of this note might be different from the original.

See MyChart message, per Ana's notes on 7/14/26, IUD was removed without issue. But in PET-MR scan it does not IUD in place.

Electronically signed by Elena M, RN at 07/22/2026 8:12 AM PDT

Telephone Encounter - Nicole A, RN - 07/14/2026 10:10 AM PDT

Formatting of this note might be different from the original.

Per visit note today:

*- She inquired about the possibility of having an endometrial biopsy performed at the same time as the IUD removal.
- After discussion with Dr. Egnal and Dr. Paras, the plan is to proceed with IUD removal today and defer the biopsy until after a pelvic ultrasound is completed.
- The patient has an appointment with her primary care provider in the next couple of hours and intends to keep that appointment.*

Closing this TE

Telephone Encounter - Nicole A, RN - 07/14/2026 8:35 AM PDT

Formatting of this note might be different from the original.

Spoke with Ana Huston, ARNP in-clinic

Per clinician, she does not perform endometrial biopsies. States that she will speak with Tam, lead MA, to attempt to arrange this for patient with another clinician

Electronically signed by Nicole A, RN at 07/14/2026 8:36 AM PDT

Telephone Encounter - Nicole A, RN - 07/14/2026 7:57 AM PDT

Formatting of this note might be different from the original.

Ana Huston, ARNP, currently seeing other patients

Note left on clinician's desk to review this TE

Electronically signed by Nicole A, RN at 07/14/2026 7:58 AM PDT
Electronically signed by Nicole A, RN at 07/14/2026 7:59 AM PDT

Telephone Encounter - Holly C, RN - 07/14/2026 4:36 AM PDT

Formatting of this note might be different from the original.

Used secure interoffice messaging to request Ana Huston ARNP review this message prior to appointment.

Onsite nurse will also try to connect with her for a warm handoff of this information

Electronically signed by Holly C, RN at 07/14/2026 4:37 AM PDT

Telephone Encounter - Leilani Paras, MD - 07/13/2026 11:30 PM PDT

Formatting of this note might be different from the original.

Routing to Ana Huston, ARNP: patient has 8AM appointment with you on Tues

She is currently undergoing workup for lytic bone lesions that are suspicious for mets with unknown primary.

Wanted to give you the heads up that she is requesting to have endometrial biopsy at the time of her IUD removal. I told her that you may not have time and that you may not do endometrial biopsies, but I'd let you know in case you wanted to try to do both the IUD removal and endometrial biopsy at her appointment with you on Tues.

**Routing to RN pool: **
Can you please make sure Ana Huston, ARNP is aware of patient's request? I will likely be busy with clinic and may not have the opportunity to see her before patient's appointment at 8AM

Electronically signed by Leilani Paras, MD at 07/13/2026 11:34 PM PDT

Telephone Encounter - Andrey A, RN - 07/13/2026 5:43 PM PDT

Formatting of this note might be different from the original.

**Leilani D Paras, MD **

It looks like the results came in and are under the imaging tab.

Routing message to clinician. Please review MyChart Message and give recommendation. Route back to RN pool if needed.

Electronically signed by Andrey A, RN at 07/13/2026 5:44 PM PDT

Telephone Encounter - Leilani Paras, MD - 07/13/2026 4:12 PM PDT

Formatting of this note might be different from the original.

Thanks for the MRI results.
As part of these MRI results, they *CT chest, abdomen and pelvis with contrast or PET/CT for further evaluation. *
I believe she had the CT this morning, which is why she was calling for diagnostic mammogram and ultrasound.

Can we please get those CT results from this AM. I have an appointment with her tomorrow to discuss results.
(I don't believe we ordered the CT. I think the physiatrist at Overlake may have?)
Or we can perhaps get in touch with Rayus to see wht they recommended diagnostic mammogram and ultrasound.
Thanks!

Electronically signed by Leilani Paras, MD at 07/13/2026 4:15 PM PDT
Electronically signed by Leilani Paras, MD at 07/13/2026 4:19 PM PDT

Telephone Encounter - Nicole A, RN - 07/13/2026 2:42 PM PDT

Formatting of this note might be different from the original.

Leilani D Paras, MD

Per Rayus portal, MRI findings are as follows:

EXAM: MR THORACIC SPINE WITHOUT CONTRAST

HISTORY: 47-year-old female with back pain since mid February after injury in the left.

COMPARISON: None.

TECHNIQUE: Sagittal T1, T2, STIR and axial T2 sequences.

FINDINGS:

There is diffusely heterogeneous T1 hypointense and multifocal T2 hyperintense hypointense marrow signal. This includes 2.3 x 2.3 cm expansile lesion in T5 with smooth cortical remodeling and fluid-fluid levels suggestive of aneurysmal bone cystlike lesion. Similar lesions seen in T1, T8, T9, T10.

There is a 1.2 x 1.1 cm expansile T1 isointense, T2 hyperintense lesion in the posterior elements of T10 with endosteal scalloping, 7:17.

There compression deformities of T1, T4, T5, and T8 vertebral bodies.

No disc herniation or spinal canal narrowing is seen. There is mild bilateral neural foraminal narrowing at T8-9 secondary to bony expansion.

Mild facet arthropathy seen in the lower lumbar spine.

In the visualized posterior right liver there is a 1.8 cm ovoid T2 hyperintense mass, 7:33. Millimetric T2 hyperintense focus in the posterior left kidney is too small to characterize, statistically likely cyst.

Normal spinal cord morphology and signal is seen.

IMPRESSION:

*Diffusely heterogeneo
us T1 hypointense and multifocal T2 hyperintense marrow signal including 2.3 x 2.3 cm expansile aneurysmal bone cyst like lesion in T5 vertebral body and similar lesions in T1, T8, T9, T10 and vertebral bodies, as well as 1.2 x 1.1 cm expansile T1 isointense, T2 hyperintense lesion in the posterior elements of T10. Additionally there is a 1.8 cm ovoid T2 hyperintense mass in the visualized posterior right liver lobe. While multiple aneurysmal bone cysts is a small possibility, the appearance is highly concerning for metastases from unknown primary. Recommend CT chest, abdomen and pelvis with contrast or PET/CT for further evaluation.*

Compression deformities of T1, T4, T5 and T8 vertebral bodies which may be pathologic.

Mild bilateral neural foraminal narrowing at T8-9 secondary to bony expansion.

Electronically signed on 7/8/2026 1:02:00 PM by Wonsuk Kim M.D.

Electronically signed by Nicole A, RN at 07/13/2026 2:44 PM PDT

Telephone Encounter - Leilani Paras, MD - 07/13/2026 2:29 PM PDT

Formatting of this note might be different from the original.
High priority since previous imaging showed pathologic fracture with findings highly suspicious for metastases.

Can we please get a copy of that CT scan? I believe it was probably ordered at Rayus - probably Kirkland because that's where her other imaging has been done.

It sounds like radiologist recommended diagnostic mammogram with ultrasound - just need diagnosis for the imaging (ie, did they see something in her breast tissue that they're wanting diagnostic mammogram for? And need to know if they recommended bilat breasts or just one side.

I guess the easiest thing would be to call Rayus for report? Or ask patient?
Once I get diagnosis, I will order and route diagnostic mammogram and ultrasound orders. Thanks

Electronically signed by Leilani Paras, MD at 07/13/2026 2:35 PM PDT

Telephone Encounter - Francis T, MA - 07/13/2026 2:12 PM PDT

Formatting of this note might be different from the original.
Pended mammogram and ultrasound per patients request.

Please fill in and sign if appropriate.

Electronically signed by Francis T, MA at 07/13/2026 2:13 PM PDT

Telephone Encounter - Chloe S, CMA - 07/13/2026 12:30 PM PDT

Formatting of this note might be different from the original.
Primary Care and Walk In Clinic Call Assist Center

Is patient a [Delegated (green banner) Medicare Advantage](https://optumcare.sharepoint.com/sites/TECL/SiteDirectory/CASPS/SitePages/CUF-Resources.aspx) or ACO Registry (pink banner) patient? No, please verify provider or department and refer to Care Management algorithm when routing/transferring call.

**Provider instructions -- **None

**Reason for call: **Pt is calling in regarding recent appointment from 07.10.26. States the MR results were reviewed and she was referred for a CT. States she completed the CT and the radiologist advised to have a diagnostic mammogram and US and pt is requesting provider to put in an urgent order for these. Would like this to be completed at Fred Hutch at UW.

Caller: Yvonne Franklin
Best number for call back: 360-201-2728

Routing TE to site MA pool to review and follow up as needed.

[table#2]:
Chief Complaint
Patient presents with
• | Imaging Test
| | *Patient is here following up on imaging from MR THORACIC SPINE WITHOUT CONTRAST 7/9/2026.*

History of Present Illness
The patient is a 47-year-old female presenting for follow-up after recent MRI and ongoing evaluation of back pain, possible malignancy, and other chronic health concerns.

Thoracic Spine Fractures and Back Pain
- Recent MRI revealed multiple thoracic spine fractures.

- Patient reports a skiing fall in 02/2026, landing on her back, but fracture locations suggest a non-traumatic etiology.
- She experiences persistent localized pain, more pronounced on one side, and neck stiffness.
- Over-the-counter 5% lidocaine cream was ineffective.
- Previously tried Percocet but could not tolerate it.
- Has used ibuprofen 600 mg twice daily for 5 months, but is concerned about worsening her chronic stomach issues.
- Requests referral to a thoracic spine specialist (Dr. Ash Patel at Proliance Orthopedics and Sports Medicine) and UW oncology.
- CT chest AP scan is scheduled Monday 9am.

Anxiety and Sleep Disturbances
- Reports significant anxiety and sleep disturbances due to diagnostic uncertainty.
- Previously used Xanax for anxiety but no longer has access and requests a refill.
- Sleep is impaired by pain and anxiety.

Additional Information
- Appetite is generally good, but she notes decreased interest in eating due to stress.
- Currently takes omega-3, vitamin C, and vitamin D supplements.
- Blood work in 01/2026 was normal.

Problem List
Current Medications

ROS:
Negative unless otherwise stated in HPI.

[table#3]:
Objective:
Vital Signs:
Blood pressure 116/78, pulse 84, temperature 98.9 °F (37.2 °C), temperature source Temporal, resp. rate 16, height 5' 4.8" (1.646 m), weight 125 lb 9.6 oz (57 kg).

Physical Exam
Constitutional:
Appearance: Normal appearance.
HENT:
Head: Normocephalic and atraumatic.
Eyes:
Conjunctiva/sclera: Conjunctivae normal.
Cardiovascular:
Rate and Rhythm: Normal rate and regular rhythm.
Pulmonary:
Effort: Pulmonary effort is normal.
Neurological:
Mental Status: She is alert.

?
[table#4]:
Assessment and Plan:

Assessment & Plan
Pathological fracture of vertebra, unspecified pathological cause, initial encounter
- Discussed risks and possible causes, including metastatic cancer
- Reviewed signs of spinal cord compression and need for urgent care
- Advised to avoid high-impact activities
- CT scan of chest, abdomen, and pelvis pending
- Refer to medical oncology for urgent evaluation
- Refer to thoracic spine specialist for further assessment
Orders:
• REFERRAL / CONSULT TO ORTHOPEDICS (NOT SPINE SURGERY) EXTERNAL ONLY
• REFERRAL / CONSULT TO ONCOLOGY
?
Lytic bone lesions on xray
- Multiple vertebral fractures present, not typical for age or trauma history
- Discussed signs and symptoms of spinal cord compression
- Reviewed importance of urgent evaluation and follow-up
- Refer to medical oncology
- Refer to thoracic spine specialist
Orders:
• Lidocaine 7.5 % cream; Apply 1 gram topically 2 times daily.

• REFERRAL / CONSULT TO ORTHOPEDICS (NOT SPINE SURGERY) EXTERNAL ONLY
• REFERRAL / CONSULT TO ONCOLOGY
?
Generalized anxiety disorder
- Patient experiencing significant anxiety and difficulty sleeping
- Discussed risks and benefits of anxiety medications
- Reviewed importance of support system and communication with family
- Prescribe citalopram for ongoing anxiety
- Prescribe Xanax for acute anxiety episodes, use sparingly
Orders:
• citalopram (Celexa) 20 MG tab; Take 1 tablet by mouth daily.
• ALPRAZolam (Xanax) 0.25 MG tab; Take 1 tablet by mouth at bedtime as needed.
?
Mild intermittent asthma without complication
Refilled
Orders:
• albutero
l HFA (Proventil, Ventolin, ProAir) 90 MCG/ACT inhaler; Take 2 puffs by inhalation every 4 to 6 hours as needed for wheezing or shortness of breath. Not to exceed 10 puffs/24 hours.
?
Migraine without aura and without status migrainosus, not intractable
Refilled
Orders:
• propranolol (Inderal) 10 MG tab; Take 1 tablet by mouth daily.
?

Follow as scheduled with PCP

Make Me the Author Attestation: Preliminary History Recorded by Clinical Staff
Preliminary information is recorded by Clinical Staff.
Recorded information was reviewed for accuracy and edited by Maryan Gelle, MD, who also personally confirmed the chief complaint with patient and completed HPI.

Yvonne Franklin has provided verbal consent for the use of DAX during today's office visit. Three identifiers (Yvonne Franklin, 6/17/1979, 360-201-2728) have been used to identify the patient.

Patient Active Problem List
[table#5]:
Diagnosis
•	Abdominal pain
•	Herpes simplex
•	Internal hemorrhoids
•	Migraine headache
•	Premature ventricular contractions
•	Esophageal reflux
•	Social phobia involving fear of public speaking
•	Supraventricular bigeminy
•	Tension-type headache
•	Vitamin D deficiency
•	Generalized anxiety disorder
•	Mild intermittent asthma without complication
•	Allergic rhinitis due to pollen
•	Muscle spasm of back
•	Left breast mass
•	Irritable bowel syndrome with diarrhea
•	Eosinophilic esophagitis
•	Gilbert syndrome
•	DDD (degenerative disc disease), cervical
•	Menorrhagia with regular cycle

[table#6]:
Current Outpatient Medications
Medication	Sig	Dispense	Refill
•	albuterol HFA (Proventil, Ventolin, ProAir) 90 MCG/ACT inhaler	Take 2 puffs by inhalation every 4 to 6 hours as needed for wheezing or shortness of breath. Not to exceed 10 puffs/24 hours.	18 g	2
•	propranolol (Inderal) 10 MG tab	Take 1 tablet by mouth daily.	100 tablet	3
•	citalopram (Celexa) 20 MG tab	Take 1 tablet by mouth daily.	100 tablet	3
•	ALPRAZolam (Xanax) 0.25 MG tab	Take 1 tablet by mouth at bedtime as needed.	30 tablet	0

•	Lidocaine 7.5 % cream	Apply 1 gram topically 2 times daily.	30 g	3
•	Norethin Ace-Eth Estradiol-FE (LOESTRIN FE) 1-20 MG-MCG tablet (28 tab pack)	Take 1 tablet by mouth daily.	84 tablet	3
•	cyclobenzaprine (Flexeril) 10 MG tab	Take 0.5-1 tablets by mouth 3 times daily as needed for muscle spasms.	30 tablet	0
•	levonorgestrel (Mirena) 52 MG IUD	1 Intra Uterine Device by intrauterine route -. Inserted in-clinic. Leave on medication list for interaction checking		
•	ALPRAZolam (Xanax) 0.5 MG tab	Take 0.5-1 tablets by mouth 2 times daily as needed for anxiety (for panic attacks). May repeat in 6-8 hours if needed. May cause sedation	15 tablet	0
•	valACYclovir 1 g tablet tab	2 tablets Q12 hrs x 1 day as needed herpes outbreak	8 tablet	3
•	citalopram (Celexa) 20 MG tab	Take 1 tablet by mouth daily.	100 tablet	1
•	SUMAtriptan (Imitrex) 100 MG tablet	TAKE 1 TABLET BY MOUTH AT ONSET OF HEADACHE, MAY TAKE 1 AND REPEAT IN 2 HOURS IF HEADACHE REMAINS, MAX 2 TABLETS PER 24 HOURS	9 tablet	5
•	Omeprazole 20 MG delayed release capsule	Take 1 capsule by mouth daily 30 minutes prior to a meal.	90 capsule	3
•	Spacer/Aero-Holding Chambers (PRO COMFORT SPACER ADULT) miscellaneous	Use 1 each as needed.	1 each	0
•	dicyclomine 10 MG capsule	Take 1 capsule by mouth 4 times daily as needed (colonic spasms).	30 capsule	3

Patient Instructions
Leilani Paras, MD - 05/13/2026 7:21 AM PDT
Formatting of this note is different from the original.
Dear Ms.Franklin

Thank you for including me in your health care today.

Here are the diagnoses that we discussed today and what we are doing about it:
ICD-10-CM
1. Menorrhagia with regular cycle N92.0

Please make an appointment for pelvic ultrasound at:
Rayus Radiology
1310 116th Ave NE, Suite E
Bellevue, WA 98004
Scheduling 855-643-7226
Phone 425-637-9729

Please start the new loestrin 1/20 Fe
If possible, please wait to start these until after your ultrasound is done.
Please let me know if you have issues with the birth control pill after 3 months on it.
Return to clinic / call in the meantime if symptoms increase/change

No new prescriptions were ordered during this visit.

No orders of the defined types were placed in this encounter.

Please contact us if you have any questions or issues about your care today, follow-up plan, or response to treatment.

Progress Notes - documented in this encounter

Leilani Paras, MD - 05/13/2026 6:49 AM PDT
Formatting of this note might be different from the original.

Yvonne Franklin has provided verbal consent for the use of DAX during today's office visit. Three identifiers (Yvonne Franklin, 6/17/1979, 360-201-2728) have been used to identify the patient.

Modified evaluation performed based on CDC protocols for COVID19.

The pros and cons of a video visit for providing this care were reviewed with Yvonne Franklin and their verbal consent has been given to deliver this visit.

This visit was conducted real time via synchronous interactive video & audio conferencing technology utilizing a HIPAA compliant platform. Patient is located in their home in the state of Washington. Leilani D Paras, MD is located remotely in home office, and is licensed in the state of Washington.

Discussed with patient/parent: You have chosen to receive care through the use of telemedicine.
Telemedicine enables health care providers at different locations to provide safe, effective, and convenient care through the use of technology.

As with any health care service, there are risks associated with the use of telemedicine, including equipment failure, poor image resolution, and information security issues.
You also understand that I cannot physically examine you and that you may need to come to clinic to complete the assessment.

I have discussed the benefits of MyChart. Patient is already signed up for MyChart.

Patient Verifier : Yvonne Franklin, 6/17/1979

Patient is accompanied by her self in the video visit.

Do you consent to the use of telemedicine in your medical care today? Yes

Patient/parent verbally understands the risks and benefits of telemedicine as explained.
All questions regarding telemedicine answered.
Preferred phone number to contact patient is :360-201-2728

Is it okay to leave a detailed voicemail on this number? Yes

		Video Visit. Follow-up on menstrual cycle.

HPI:
History of Present Illness
The patient is a 46-year-old female who is seen via video visit for follow-up of menorrhagia and recent neck pain.

Menorrhagia
- Since August 2025, menstrual cycles occur every 3 weeks, with 1 week of heavy bleeding followed by 1 week of brown discharge, persisting for 9 months.
- Fatigue is attributed to prolonged bleeding and frequent menstrual product use.
- The most recent period began last Thursday (5/7/26) and is ongoing, with an expected 5 days of brown discharge to follow.
- Brown discharge at the end of the cycle is a new symptom.
- An intrauterine device was placed in August 2025; she is considering removal in September 2026 if no improvement in symptoms
- She does not use iron supplements but takes vitamin D and B12.
- She previously tolerated birth control pills.
- There is no personal or family history of blood clotting disorders.
- She is interested in further hormonal testing, including holistic options, but has concerns about some hormone therapies.
-She was previously seen for this on 1/14/26
-Bloodwork at the time was negative except for FSH elevated at 30.2
-Pelvic ultrasound was ordered - she has not yet scheduled it

Right sided thoracic back pain since 2/14/26
- Evaluated by physical medicine and rehabilitation 5/11/26
- Cervical etiology is suspected based on x-rays from 05/11/2026.
- Gabapentin and meloxicam were prescribed and are pending pharmacy fulfillment.

GYNECOLOGICAL HISTORY:
- Last menstrual period: 5/7/26
- Cycle length: 3 weeks
- Duration: 10-14 days
- Heavy bleeding for 1 week, followed by 1 week of brown discharge. Then no bleeding x 1 week and then she restarts cycle with heavy bleeding

She does not use tobacco.

FAMILY HISTORY
She does not have a family history of blood clotting disorders.

Problem list, medical/surgical history, medications, allergies, immunizations, social and family h
istory reviewed and appropriately updated in Epic.

Assessment and Plan:

[table#11]:
		ICD-10-CM	
1.	**Menorrhagia with regular cycle **	**N92.0**	**Norethin Ace-Eth Estradiol-FE (LOESTRIN FE) 1-20 MG-MCG tablet (28 tab pack)**
2.	Chronic right-sided thoracic back pain	M54.6	Seeing PM+R. Thought to be cervical in origin.
		G89.29	
		since 2/14/26.	

?
Assessment & Plan
Menorrhagia
- Periods every 3 weeks with heavy bleeding and brown discharge
- Labs reviewed: thyroid, CBC, ferritin, iron, B12, vitamin D, estrogen, FSH
- Discussed risks and benefits of birth control pills
- Provided information about low-dose estrogen and possible side effects
- Pelvic ultrasound ordered to assess uterine structure before starting birth control pills
- Prescribe Loestrin 1/20 FE:
- Start after ultrasound or sooner if desired
- Start with taking active pills x 3wks, 1 week off and then restart
- If doing well on OCP with improvement in symptoms, she can space out menses to q3 mos
- Provide 84 tablets with three refills for one year

Follow-up:
- Follow up via MyChart message to review pelvic ultrasound report
- Return to clinic / call in the meantime if symptoms increase/change
- Discuss
ed / reviewed indications, risks, benefits, side effects, and proper use of med(s) given today. Questions / concerns re: medication(s) addressed.
- Patient expressed understanding and agreement with above treatment plan.

Make Me the Author Attestation: Preliminary History Recorded by Clinical Staff
Preliminary information is recorded by Clinical Staff.
Recorded information was reviewed for accuracy and edited by Leilani D Paras, MD, who also personally confirmed the chief complaint with patient and completed HPI.

E/M code was selected based on 30 minutes spent on the date of encounter reviewing pertinent history and previous diagnostics, performing medically appropriate examination and evaluation, ordering diagnostic tests and/or medications, counseling and education to patient/family/caregiver. This excludes activities performed by clinical staff.

For G2211, Patient chronically managed by me for ongoing care related to this patient's single, serious, or complex condition; I will follow/have followed the patient longitudinally for this condition

Progress Notes - documented in this encounter

Leilani Paras, MD - 04/24/2026 7:29 AM PDT

Formatting of this note might be different from the original.

Yvonne Franklin has provided verbal consent for the use of DAX during today's office visit. Three identifiers (Yvonne Franklin, 6/17/1979, 360-201-2728) have been used to identify the patient.

Modified evaluation performed based on CDC protocols for COVID19.

The pros and cons of a video visit for providing this care were reviewed with Yvonne Franklin and their verbal consent has been given to deliver this visit.

This visit was conducted real time via synchronous interactive video & audio conferencing technology utilizing a HIPAA compliant platform. Patient is located in their home in the state of Washington. Leilani D Paras, MD is located in the EFMC FAMILY MEDICINE office, and is licensed in the state of Washington.

Discussed with patient/parent: You have chosen to receive care through the use of telemedicine.
Telemedicine enables health care providers at different locations to provide safe, effective, and convenient care through the use of technology.
As with any health care service, there are risks associated with the use of telemedicine, including equipment failure, poor image resolution, and information security issues.
You also understand that I cannot physically examine you and that you may need to come to clinic to complete the assessment.

I have discussed the benefits of MyChart. Patient is already signed up for MyChart.

Patient Verifier : Yvonne Franklin, 6/17/1979

Patient is accompanied by her self in the video visit.

Do you consent to the use of telemedicine in your medical care today? Yes

Patient/parent verbally understands the risks and benefits of telemedicine as explained.
All questions regarding telemedicine answered.
Preferred phone number to contact patient is :360-201-2728

Is it okay to leave a detailed voicemail on this number? Yes

[table#2]:
Chief Complaint
Patient presents with
•	Follow Up
		*Back pain *

HPI:

1. Follow up on back pain
History of Present Illness
The patient is a 46-year-old female presenting for follow-up regarding persistent right upper back pain.

Right Upper Back Pain
- She has experienced constant right upper back pain for two months, which has not improved with physical therapy or prescribed exercises.
- The pain worsens with movement, deep breathing, and sneezing.
- Her husband has noticed that the affected area feels softer than the opposite side, raising concern for inflammation.
- She manages the pain with ibuprofen and Tylenol, taking three ibuprofen and two Tylenol up to three times daily, spaced 4 to 6 hours apart.

- Pain intensity is rated 6–8/10 before medication, decreasing to 1/10 after dosing.
- She is concerned about gastrointestinal effects from frequent medication use and takes them with food and water.
- Hydrocodone was discontinued due to side effects.
- She has not tried muscle relaxants and is considering this option.

- Review of films done on 2/26/26 showed:
- Xray right ribs: Visualized ribs are intact. No displaced fracture.
- Chest x-ray:
-Healed left lateral ninth rib fracture is present.
-Otherwise normal chest.
-No pneumothorax.

Very Frequent Periods
- She plans a separate appointment to address very frequent periods despite having an IUD.
- She wishes to discuss birth control options.

GYNECOLOGICAL HISTORY:
- Very frequent periods

Problem list, medical/surgical history, medications, allergies, immunizations, social and family history reviewed and appropriately updated in Epic.

General: No focal deficit present.
Mental Status: She is alert and oriented to person, place, and time.
Psychiatric:
Mood and Affect: Mood normal.
Behavior: Behavior normal.
Thought Content: Thought content normal.
Judgment: Judgment normal.

[table#10]:
Assessment and Plan:

[table#11]:
		ICD-10-CM	
1.	**Upper back pain on right side **	**M54.9**	**REFERRAL / CONSULT TO PHYSICAL MEDICINE REHAB EXTERNAL ONLY**
			cyclobenzaprine (Flexeril) 10 MG tab

Assessment & Plan
Upper back pain:
- Musculoskeletal pain persists despite physical therapy and analgesics
- Prior x-rays and chest x-ray show no acute fracture; healed left ninth rib fracture is unrelated
- Discussed musculoskeletal etiology, medication side effects, and physical medicine and rehabilitation
- Reviewed sedation risk with cyclobenzaprine and importance of taking medications with food
- No new imaging ordered; previous imaging reviewed
- Refer to Overlake Physical Medicine and Rehabilitation
- Prescribe cyclobenzaprine 10 mg: take 0.5 to 1 tablet up to three times daily as needed

- Continue ibuprofen and acetaminophen as needed with food
- Instruct to avoid driving or operating heavy machinery while using cyclobenzaprine
- Make appointment with Overlake PM&R.
- She will make a separate appointment to address very frequent periods despite having an IUD.
- Return to clinic in the meantime if symptoms increase/change
- Discussed / reviewed indications, risks, benefits, side effects, and proper use of med(s) given today. Questions / concerns re: medication(s) addressed.
- Patient expressed understanding and agreement with above treatment plan.

Make Me the Author Attestation: Preliminary History Recorded by Clinical Staff
Preliminary information is recorded by Clinical Staff.
Recorded information was reviewed for accuracy and e
dited by Leilani D Paras, MD, who also personally confirmed the chief complaint with patient and completed HPI.

For G2211, Patient chronically managed by me for ongoing care related to this patient's single, serious, or complex condition; I will follow/have followed the patient longitudinally for this condition

Patient Instructions

Leilani Paras, MD - 02/25/2026 12:50 PM PST
Formatting of this note is different from the original.
Dear Ms.Franklin

Thank you for including me in your health care today.

Here are the diagnoses that we discussed today and what we are doing about it:
ICD-10-CM
1. Upper back pain on right side M54.9
2. Pain aggravated by coughing and deep breathing R52
R05.9

Continue ibuprofen / tylenol as needed
Use the hydrocodone / APAP as needed for severe pain
Please make sure you are not getting more then 4000mg / day of tylenol
Please make sure to take these meds with food
We're checking xrays today and will contact you with results.
Please hold off on physical therapy appointment until after xrays are back.
Return to clinic if symptoms increase/change or persist despite this plan.

Prescriptions Signed In This Encounter
Medications
HYDROcodone-acetaminophen 5-325 MG tablet tab
Sig: Take 1 tablet by mouth every 6 hours as needed for pain. Max Daily Amount: 20 mg of opioid Max 4,000 mg day acetaminophen all sources.
Dispense: 20 tablet
Refill: 0

Additional orders placed in this encounter
Procedures
REFERRAL / CONSULT TO PHYSICAL THERAPY (EXTERNAL)
O2 Sat (Only chargable for acute issues)
XR Ribs Unilateral Right 2V
XR CHEST 2V

Please contact us if you have any questions or issues about your care today, follow-up plan, or response to treatment.

Yvonne Franklin has provided verbal consent for the use of DAX during today's office visit. Three identifiers (Yvonne Franklin, 6/17/1979, 360-201-2728) have been used to identify the patient.

[table#1]:
Subjective:
This patient is unaccompanied in the exam room.

Yvonne is a 46 y.o. female who presents for:

[table#2]:
Chief Complaint
Patient presents with
•	Back Pain
		*Started 2 weeks ago pian started to developed. *

|

History of Present Illness:
History of Present Illness
A 46-year-old female presents with right upper back pain following a traumatic event.

Right Upper Back Pain
- Three weeks ago, she choked on a supplement pill and her husband applied forceful pressure to her right upper back and rib area (back blows) to help her dislodge the food
- No immediate pain was noted.
- Two weeks ago, she developed dull, constant pain below the right scapula, making breathing difficult and interfering with daily activities.
- Pain is localized to the right side, rated 5/10 at baseline, increasing to 8-9/10 with activities like sneezing or dishwashing.
- Sneezing triggers sharp exacerbations; deep breathing, coughing, and certain movements worsen discomfort.
- No numbness, tingling, weakness, cold symptoms, fevers, or chills. No dyspnea, no palpitations, no chest pain.
- Skiing and running during her trip may have further irritated the area.
- Ibuprofen and Tylenol provide partial relief.
- Previously used hydrocodone for pain management.

Uses alprazolam as needed for anxiety

Review of Systems
Pertinent items are noted in HPI/associated Symptoms and otherwise, all other systems negative.

[table#4]:
Objective:

BP 98/62 (Arm: LEFT, Position: SITTING, Cuff Size: ADULT) | Pulse 68 | Temp 99.1 °F (37.3 °C) (Temporal) | Resp 18 | Ht 5' 4.8" (1.646 m) | Wt 127 lb 9.6 oz (57.9 kg) | LMP (LMP Unknown) | SpO2 97% Comment: 97% Sp02 | 70 BMP | BMI 21.36 kg/m²

Physical Exam
Vitals reviewed.
Constitutional:
General: She is not in acute distress.
Cardiovascular:
Rate and Rhythm: Normal rate and regular rhythm.
Heart sounds: Normal heart sounds.
Pulmonary:
Effort: Pulmonary effort is normal. No respiratory distress.
Breath sounds: Normal breath sounds. No stridor. No wheezing, rhonchi or rales.
Musculoskeletal:
Right shoulder: No swelling, effusion, tenderness** (but back pain is elicited with forward flexion and full extension of her R arm)**, bony tenderness or crepitus. Normal range of motion.
Left shoulder: Normal.
Cervical back: No swelling, edema, tenderness or bony tenderness.
Thoracic back: Spasms** (of bilat upper trapezius muscles)** and tenderness** (mild, of bilat upper trapezius muscles)** present. No swelling, edema, signs of trauma or bony tenderness.
Lumbar back: No swelling, e
dema or bony tenderness.
Right lower leg: No edema.
Left lower leg: No edema.
Skin:
General: Skin is warm.
Capillary Refill: Capillary refill takes less than 2 seconds.
Neurological:
General: No focal deficit present.
Mental Status: She is alert and oriented to person, place, and time.
Psychiatric:
Mood and Affect: Mood normal.
Behavior: Behavior normal.
Thought Content: Thought content normal.
Judgment: Judgment normal.

[table#5]:
Assessment/Plan:

[table#6]:
		ICD-10-CM	
1.	**Upper back pain on right side **	**M54.9**	**XR RIBS RIGHT**
			XR CHEST 2V
			REFERRAL / CONSULT TO PHYSICAL THERAPY
			HYDROcodone-acetaminophen 5-325 MG tablet tab

2.	Pain aggravated by coughing and deep breathing	R52	XR RIBS RIGHT
		R05.9	XR CHEST 2V
			PULSE OXIMETRY REST-SNGL-BACK OFFICE
			HYDROcodone-acetaminophen 5-325 MG tablet tab

Assessment & Plan
Right upper back pain:
- Constant dull pain below right scapula, worsened by sneezing, washing dishes, deep breathing, and full arm extension. No numbness, tingling, weakness, cold symptoms, fevers, or chills.
- Tenderness and spasm in upper trapezius muscle. Rhomboids normal and non-tender. No pain with palpation of thoracic spine, lumbar area, or right shoulder. Pain present only at full range of arm motion.
- Ordered chest x-ray and pulse oximetry to rule out fracture and assess lung function. Await x-ray results before initiating physical therapy. If x-ray is negative, pain likely due to trauma-related irritation.
- Prescribe hydrocodone with Tylenol for severe pain, not to exceed 4000 mg Tylenol per day. Continue ibuprofen as needed. Take all medications with food.
- Refer to physical therapy if x-ray is negative. Hold physical therapy if fracture is detected.
- Return to clinic or ER if symptoms worsen or persist.
- Discussed / reviewed indications, risks, benefits, side effects, and proper use of med(s) given today. Questions / concerns re: medication(s) addressed. She understands that the hydrocodone can cause sedation. She is to not drive or operate heavy machinery after taking it. She understands to not take with other sedating medications / substances, including EtOH and her alprazolam.
- PDMP reviewed and consistent
- Patient expressed understanding and agreement with above treatment plan.

Make Me the Author Attestation: Preliminary History Recorded by Clinical Staff
Preliminary information is recorded by Clinical Staff.
Recorded information was reviewed for accuracy and edited by Leilani D Paras, MD, who also personally confirmed the chief complaint with patient and completed HPI.

Voice recognition technology may have been employed in the creation of this record.

For G2211, Patient chronically managed by me for ongoing care related to this patient's single, serious, or complex condition; I will follow/have followed the patient longitudinally for this condition

Patient Instructions
Leilani Paras, MD - 01/14/2026 2:37 PM PST
Formatting of this note is different from the original.
Dear Ms.Franklin

Thank you for including me in your health care today.

Here are the diagnoses that we discussed today and what we are doing about it:
ICD-10-CM
1. Menometrorrhagia N92.1
2. Other fatigue R53.83
3. Vitamin D deficiency E55.9

We're checking labs and will contact you via MyChart message with results

Please schedule your pelvic ultrasound at:
Rayus Radiology
1310 116th Ave NE, Suite E
Bellevue, WA 98004
Scheduling 855-643-7226
Phone 425-637-9729

Please let me know if you do not hear back from me about 7-10 days after getting your imaging. I'll need to call them to get your results.
We'll discuss further management based on results.

No new prescriptions were ordered during this visit.

Additional orders placed in this encounter
Procedures
External US Pelvis Complete With Transvaginal
TSH REFLEX TO FT4
HEMOGRAM (CBC NO DIFF)
FERRITIN
VITAMIN B12 (LAB)
IRON PROFILE
VIT D (12 OH VITAMIN D)
ESTROGENS, TOTAL IA
FSH

Please contact us if you have any questions or issues about your care today, follow-up plan, or response to treatment.

Yvonne Franklin has provided verbal consent for the use of DAX during today's office visit. Three identifiers (Yvonne Franklin, 6/17/1979, 360-201-2728) have been used to identify the patient.

[table#1]:
Subjective:
This patient is unaccompanied in the exam room.

Yvonne is a 46 y.o. female who presents for:

[table#2]:
| **Chief Complaint** |

| --- |
| Patient presents with |
| • | Bleeding |
| | | *Patient stated been having issues with her IUD with lots of bleeding, every 21 days. * |

History of Present Illness
46-year-old female here for IUD follow-up.

IUD Follow-up
- IUD inserted end of August 2025
- Menstrual cycles every 21 days, lasting 7 days, with heavy flow requiring tampons and pads changed multiple times daily
- Consistent for 5 months
- Did not have these issues with previous IUD

Fatigue
- Reports significant fatigue despite good sleep hygiene and no alcohol
- Suspects iron or vitamin D deficiency
- History of anemia and vitamin D deficiency
- Resumed vitamin D supplements yesterday
- Currently on day 5 of menstrual cycle
- No hot flashes or night sweats

Social History
- Alcohol: Abstinent
- Sleep: Good, no issues

GYNECOLOGICAL HISTORY
- Cycle Length: 21 days
- Duration: 7 days
- Frequency and Flow: Heavy, tampons and pads changed multiple times daily

[table#3]:
|

Review of Systems
Pertinent items are noted in HPI/associated Symptoms and otherwise, all other systems negative.

[table#7]:
Objective:

BP 112/74 (Arm: LEFT, Position: SITTING, Cuff Size: ADULT) | Pulse 76 | Resp 16 | Ht 5' 5" (1.651 m) | Wt 128 lb (58.1 kg) | LMP 01/10/2026 (Approximate) | SpO2 99% | BMI 21.30 kg/m^2

Physical Exam
Vitals reviewed.
Constitutional:
General: She is not in acute distress.
Cardiovascular:
Rate and Rhythm: Normal rate and regular rhythm.
Heart sounds: Normal heart sounds.
Pulmonary:
Effort: Pulmonary effort is normal.
Breath sounds: Normal breath sounds.

Abdominal:
General: Bowel sounds are normal. There is no distension.
Palpations: Abdomen is soft. There is no mass.
Tenderness: There is no abdominal tenderness. There is no guarding or rebound.
Genitourinary:
Exam position: Lithotomy position.
Vagina: Normal.
Cervix: Normal. No cervical motion tenderness, friability or lesion.
Uterus: Normal. Not tender.
Adnexa: Right adnexa normal and left adnexa normal.
Right: No mass, tenderness or fullness.
Left: No mass, tenderness or fullness.
Comments: **Patient is on her menses - there is red blood in vaginal canal **

IUD strings visualized and in place
Skin:
General: Skin is warm.
Capillary Refill: Capillary refill takes less than 2 seconds.
Neurological:
General: No focal deficit present.
Mental Status: She is alert and oriented to person, place, and time.
Psychiatric:
Mood and Affect: Mood normal.
Behavior: Behavior normal.
Thought Content: Thought content normal.
Judgment: Judgment normal.

[table#8]:
Assessment/Plan:

[table#9]:
		ICD-10-CM	
1.	**Menometrorrhagia **	**N92.1**	**TSH REFLEX TO FT4**
			HEMOGRAM (CBC NO DIFF)
			FERRITIN
			VITAMIN B12 (LAB)
			IRON PROFILE
			US PELVIS COMPLETE WITH TRANSVAGINAL
			ESTROGENS, TOTAL IA
			FSH
2.	Other fatigue	R53.83	TSH REFLEX TO FT4
			HEMOGRAM (CBC NO DIFF)
			FERRITIN
			VITAMIN B12 (LAB)
			IRON PROFILE
3.	Vitamin D deficiency	E55.9	25 OH VITAMIN D

Assessment & Plan
Menometrorrhagia:
- Periods every 21 days for 7 days with heavy flow since IUD insertion in August 2025. Reports low energy and fatigue.
- Order labs: CBC, iron, ferritin, B12, TSH, reflex to free T4, vitamin D.
- Conduct ultrasound for IUD placement and uterine abnormalities.
- Consider low-dose OCP if results are normal.
- Discussed that these symptoms can occur with IUDs. Oftentimes, they resolve but may take 6-8 months.

Fatigue:
- Significant fatigue despite adequate sleep and life
style improvements.
- Order labs: iron, ferritin, B12, CBC, TSH, reflex to free T4.

Vitamin D deficiency:
- History of vitamin D deficiency, taking 5000 IU daily x 2 days
- Check vitamin D levels for further supplementation.
- Continue current vitamin D regimen until results available.

Follow-up
-Management per results
-Return to clinic if symptoms increase/change. Return precautions given
-Patient expressed understanding and agreement with above treatment plan.

Make Me the Author Attestation: Preliminary History Recorded by Clinical Staff
Preliminary information is recorded by Clinical Staff.
Recorded information was reviewed for accuracy and edited by Leilani D Paras, MD, who also personally confirmed the chief complaint with patient and completed HPI.

Voice recognition technology may have been employed in the creation of this record.

E/M code was selected based on 33 minutes spent on the date of encounter reviewing pertinent history and previous diagnostics, performing medically appropriate examination and evaluation, ordering diagnostic tests and/or medications, counseling and education to patient/family/caregiver. This is excludes activities performed by clinical staff.
For G2211, Patient chronically managed by me for ongoing care related to this patient's single, serious, or complex condition; I will follow/have followed the patient longitudinally for this condition

[table#10]:
Patient Instructions
Dear Ms.Franklin

Thank you for including me in your health care today.

Here are the diagnoses that we discussed today and what we are doing about it:
[table#11]:
		ICD-10-CM
1.	**Menometrorrhagia **	**N92.1**
2.	Other fatigue	R53.83
3.	Vitamin D deficiency	E55.9

We're checking labs and will contact you via MyChart message with results

**Please schedule your pelvic ultrasound at: **
Rayus Radiology
1310 116th Ave NE, Suite E
Bellevue, WA 98004
Scheduling 855-643-7226
Phone 425-637-9729

**Please let me know if you do not hear back from me about 7-10 days after getting your imaging. I'll need to call them to get your results. **
**We'll discuss further management based on results. **

No new prescriptions were ordered during this visit.

Miscellaneous Notes - documented in this encounter

Telephone Encounter - Andrey A, RN - 01/14/2026 11:08 AM PST

Formatting of this note might be different from the original.

Spoke with Leilani D Paras, MD and patient. Helped patient book appointment for 2 PM today with Leilani D Paras, MD.

Electronically signed by Andrey A, RN at 01/14/2026 11:12 AM PST

Telephone Encounter - Andrey A, RN - 01/14/2026 10:04 AM PST

Formatting of this note might be different from the original.

Called patient and relayed message from Leilani D Paras, MD. Patient in agreement with plan. Will call patient back after confirming with Leilani D Paras, MD about a possible opening for today.

Electronically signed by Andrey A, RN at 01/14/2026 10:05 AM PST

Telephone Encounter - Leilani Paras, MD - 01/14/2026 6:57 AM PST

Formatting of this note might be different from the original.

Please tell her that it is possible for women to have menses like she's having after an IUD, even though this is not what she experienced last time.

I do agree that low energy could be due to low iron, since she's having more menses now. Please recommend she return to clinic for eval - want to check her IUD strings, make sure they're in place and also do labs.

Please assist in scheduling her for OV - ok to fit her in if needed. Please let me know if questions. Thanks

Electronically signed by Leilani Paras, MD at 01/14/2026 7:00 AM PST

Telephone Encounter - Lillian D, RN - 01/12/2026 11:19 AM PST

Formatting of this note might be different from the original.
Lillian, RN BSN -- Call Assist RN/WIC RN

Provider: **Patient would like to talk with provider. Patient would like to know if this bleeding is normal? **
Menstrual cycle is every 21 days and last 7 days.
Use to have IUD for 8 years
Got a new IUD in August 2025
With last IUD had a little spotting and then no periods
Patient currently has levonorgestrel IUD
Starting to get low energy and concerned iron is low
Patient said body is acting different from the same hormonal IUD she had for 8 years

Route to RN pool with orders. Thank you!

Situation: IUD questions

Background:
Patient calling
Patient identified by name and date of birth
Phone number confirmed

Assessment:
Menstrual cycle is every 21 days and last 7 days.
Use to have IUD for 8 years
Got a new IUD in 2025

With last IUD had a little spotting and then no periods
Patient currently has levonorgestrel
Starting to get low energy and concerned iron is low
Patient is currently on cycle this day 3
Soaking tampons needing about 5 pads throughout the day
Has little stomach discomfort

**Recommendation: **Disposition: Message sent to provider
Patient to seek emergent care if Severe vaginal bleeding (e.g., soaking 2 pads or tampons per hour and present 2 or more hours; 1 menstrual cup every 2 hours)
Patient verbalized understanding and agrees to plan.

Protocol Used: Contraception - IUD Symptoms and Questions (Adult)
Disposition for Call (Nurse Override): Discuss with PCP and Callback by Nurse Today
Override Reason: Caller refused suggested disposition
Override Notes: patient would like to speak with provider
Protocol-Based Disposition: Go to Office Now

Positive Triage Question:
* Moderate vaginal bleeding (e.g., soaking 1 pad or tampon per hour and present > 6 hours; 1 menstrual cup every 6 hours)

Care Advice Discussed:
* The Hormonal IUD - Side Effects
- It is common for your menstrual periods to completely go away or become lighter and less frequent after placement of a hormone releasing IUD.
- Changes in Vaginal Bleeding: About 1 in 4 women will have bleeding or spotting between menstrual periods during the first 6 months. Most women notice that their menstrual periods become lighter after getting a hormonal IUD.
- Missed Menstrual Periods: About 2 out of 10 women stop having periods having this type of IUD for 1 year. The medical term for this is amenorrhea. When the IUD is removed, your menstrual periods will come back.
- Other Symptoms: Some women have mild breast tenderness, acne, and headache. This is because a small amount of the hormone from the IUD gets into the blood stream.

Negative Triage Questions:
* Shock suspected (e.g., cold/pale/clammy skin, too weak to stand, low BP, rapid pulse)
* Sounds like a life-threatening emergency to the triager
* Severe abdominal pain (e.g., excruciating) and present > 1 hour
* Severe vaginal bleeding (e.g., soaking 2 pads or tampons per hour and present 2 or more hours; 1 menstrual cup every 2 hours)
* Patient sounds very sick or weak to the triager

Reference *ClearTriage - Adult Telephone Protocols
, Office Version by David A. Thompson, MD, FACEP & Pediatric Telephone Protocols by Barton D. Schmitt.*

Progress Notes - documented in this encounter

VI Tran, MD - 08/22/2025 8:06 AM PDT

Formatting of this note might be different from the original.

This patient is unaccompanied in the exam room.

[table#1]:
Subjective:
Yvonne is a 46 y.o. female who presents for:
[table#2]:
Chief Complaint
Patient presents with
•	IUD Removal
•	IUD Insertion

HPI:
46-year-old female presents today for scheduled IUD removal and insertion. Contraceptive consult completed 8/14/2025. Patient has no new concerns today. Consent signed by patient.
Problem List
Current Medications

Reviewed and updated this visit by provider:

Review of Systems
Constitutional: Negative.
Genitourinary: Negative.

[table#3]:
Objective:
Blood pressure 102/64, pulse 68, temperature 98 °F (36.7 °C), temperature source Oral, resp. rate 16, height 5' 5.25" (1.657 m), weight 126 lb (57.2 kg).
Physical Exam
Constitutional:
Appearance: Normal appearance.
HENT:
Head: Normocephalic and atraumatic.
Cardiovascular:
Rate and Rhythm: Normal rate.
Pulmonary:
Effort: Pulmonary effort is normal.
Genitourinary:
General: Normal vulva.

Vagina: Normal.
Cervix: Normal.
Uterus: Normal.
Adnexa: Right adnexa normal and left adnexa normal.
Comments: **IUD string in place **
Neurological:
Mental Status: She is alert and oriented to person, place, and time.
Psychiatric:
Mood and Affect: Mood normal.
Behavior: Behavior normal.

Procedure: IUD removal and insertion
IUD type: Mirena

The patient was positioned in the lithotomy position.
The speculum was inserted to visualize the cervix. IUD string visible outside the cervical os.
Ring forceps were used to remove the IUD in its entirety.
The cervix was cleansed with an antiseptic solution.
A tenaculum was applied to the cervix for stabilization.
Uterine sounding was performed to measure the depth of the uterine cavity: 6cm.
The IUD was loaded into the insertion device according to the manufacturer's instructions.
The IUD was inserted through the cervical canal and placed at the fundus of the uterus.
The strings were trimmed to approximately 3 cm outside the cervical os.
The tenaculum and speculum were removed.

[table#4]:
Assessment and Plan:
1. Encounter for IUD removal and reinsertion (Primary)
Patient advised on expected cramping and spotting.
Educated on signs of potential complications (e.g., severe pain, heavy bleeding, signs of infection) and instructed to contact the office if these occur.
Follow-up as needed

- INSERT INTRAUTERINE DEVICE
- levonorgestrel (Mirena) IUD 52 mg
- levonorgestrel (Mirena) 52 MG IUD; 1 Intra Uterine Device by intrauterine route -. Inserted in-clinic. Leave on medication list for interaction checking
- REMOVE INTRAUTERINE DEVICE

-- Discussed with Patient and made AVS available through MyChart with treatment recommendations, any medication information (including risk and benefits of antibiotics/medication if prescribed), strict return precautions given, and when to seek immediate medical attention.

-- The concerns and questions of the Patient were addressed. The Patient verbally demonstrated understanding of and agreement with the plan.

Make Me the Author Attestation: Preliminary History Recorded by Clinical Staff
Preliminary information is recorded by Clinical Staff.
Recorded information was reviewed for accuracy and edited by Vi Tran, MD, who also personally confirmed the chief complaint with patient and completed HPI.

Progress Notes - documented in this encounter

VI Tran, MD - 08/14/2025 1:57 PM PDT

Formatting of this note might be different from the original.

This patient is unaccompanied in the exam room.

[table#1]:
Subjective:
Yvonne is a 46 y.o. female who presents for:
[table#2]:
Chief Complaint
Patient presents with
•	Contraception
		IUD consult

HPI:
46-year-old female presents today for evaluation of IUD removal and reinsertion.
She does not check her string at home. Has not had a speculum or pelvic exam within the last year.
She had her Mirena IUD placed in 2017. She is due for replacement.
Denies complications with initial placement of IUD.
Currently have occasional breakthrough bleeding, but otherwise amenorrheic with use of Mirena IUD.
Would like to continue hormonal IUD for contraceptive management.

Problem List
Current Medications

Reviewed and updated this visit by provider:

Review of Systems
Constitutional: Negative for chills and fever.
Genitourinary: Negative for menstrual problem.

[table#3]:
Objective:
Blood pressure 100/66, pulse **(!) 56**, temperature 97.8 °F (36.6 °C), temperature source Oral, resp. rate 16, height 5' 5" (1.651 m), weight 130 lb (59 kg).
Physical Exam
Constitutional:
Appearance: Normal appearance.
HENT:
Head: Normocephalic and atraumatic.
Cardiovascular:
Rate and Rhythm: Normal rate.
Pulmonary:
Effort: Pulmonary effort is normal.
Genitourinary:
General: Normal vulva.
Vagina: Normal.
Cervix: Normal.
Uterus: Normal.

Adnexa: Right adnexa normal and left adnexa normal.
Comments: **Iud string in place **
Neurological:
Mental Status: She is alert and oriented to person, place, and time.
Psychiatric:
Mood and Affect: Mood normal.
Behavior: Behavior normal.

[table#4]:
Assessment and Plan:
1. Encounter for routine checking of intrauterine contraceptive device (IUD) (Primary)
IUD string in place
Precedure, risks, and benefits discussed regarding Mirena IUD removal and replacement
Follow-up was scheduled for procedure

[table#5]:
Future Appointments

[table#6]:
		Provider	Department	Center
	8/22/2025 8:00 AM	Tran, VI Thuy, MD	OPTUM-EFMC FAMILY MEDICINE	EASTSIDE
	8/21/2026 8:00 AM	Paras, Leilani, MD	OPTUM-EFMC FAMILY MEDICINE	EASTSIDE

[table#7]:

-- Discussed with Patient and made AVS available through MyChart with treatment recommendations, any medication information (including risk and benefits of antibiotics/medication if prescribed), strict return precautions given, and when to seek immediate medical attention.

-- The concerns and questions of the Patient were addressed. The Patient verbally demonstrated understanding of and agreement with the plan.

Make Me the Author Attestation: Preliminary History Recorded by Clinical Staff
Preliminary information is recorded by Clinical Staff.
Recorded information was reviewed for accuracy and edited by Vi Tran, MD, who also personally confirmed the chief complaint with patient and completed HPI.

E/M code was selected based on 20 minutes spent on the date of encounter reviewing pertinent history and previous diagnostics, performing medically appropriate examination and evaluation, ordering diagnostic tests and/or medications, counseling and education to patient/family/caregiver. This excludes separately reportable services.

For G2211, Patient chronically managed by me for ongoing care related to this patient's single, serious, or complex condition; I will follow/have followed the patient longitudinally for this condition

GAD-7 Score (0-21)	3	07/18/2025 8:15 AM PDT	Brittney S, MA	Active

If you checked off any problems on this questionnaire so far,

Question	Answer	Date of Assessment	Author	Status
How difficult have these problems made it for you to do your work, take care of things at home, or get along with other people?	Not difficult at all	07/18/2025 8:15 AM PDT	Brittney S, MA	Active

Patient Instructions - documented in this encounter

Patient Instructions

Leilani Paras, MD - 07/18/2025 8:55 AM PDT
Formatting of this note is different from the original.
Dear Ms.Franklin

Thank you for including me in your health care today.

Here are the diagnoses that we discussed today and what we are doing about it:
ICD-10-CM
1. Preventative health care Z00.00
2. Generalized anxiety disorder F41.1
3. Mild intermittent asthma without complication J45.20
4. Migraine without aura and without status migrainosus, not intractable G43.009
5. Social phobia involving fear of public speaking F40.10
6. Herpes simplex B00.9
7. Vitamin D deficiency E55.9
8. Irritable bowel syndrome with diarrhea K58.0
9. Gastroesophageal reflux disease without esophagitis K21.9
10. Abdominal cramping R10.9
11. Other acute gastritis without hemorrhage K29.00
12. Generalized anxiety disorder F41.1
13. Oropharyngeal dysphagia R13.12

Restart citalopram 20mg - 1/2 tablet daily for 1 wk then increase to 1 tablet daily thereafter. Please send a MYChart message in 1 month to let me know how you're doing.

Continue current medications

Please make an appointment with Dr. Selinger

We're checking labs and will contact you via MyChart

Please make an appointment for your Mirena IUD - removal and re-insertion of new one.

Return to clinic 1 year for complete physical exam, sooner as needed

Progress Notes - documented in this encounter

Leilani Paras, MD - 07/18/2025 8:03 AM PDT
Formatting of this note might be different from the original.
[table#1]:
Subjective:
This patient is unaccompanied in the exam room.
Yvonne Franklin is a 46 y.o. female who is here for:
[table#2]:
Chief Complaint
Patient presents with
•	Physical
		Patient is here for a Annual Physical Exam patient is fasting
Patient see eye dr every year or two
Patient gets exercises every week

Just got back from 2 week trip from Hawaii

Concerns: see below
Diet: Healthy overall, hubby is a good chef
Exercise: No exercise usually because of work. But she exercised every day while in Hawaii
Sleep: sleeps efficiently when she does sleep between 12-6AM
Voiding: Feeling constantly bloated, feels like her gut is out of wack. No issues with urination or BMs. No rectal bleeding

Work: Still at previous job - no work/life balance, stressful. Working around the clock. Interviewing for new job.
Household: Lives with husband and 2 kids
EtOH: 1-2 glasses of wine daily - it helps her relax. We discussed keeping it down to 1 drink/day
Tobacco: None
Drug: None

Menstruation: no menses on Mirena IUD until recently, has occasional spotting
Sexually activity / contraception: Mirena IUD - placed in 2017 (needing replacement 2025) - will make an appointment for removal

and re-insertion.

Immunizations: These were reviewed with patient today
Pneumonia vaccine: PCV20 - declining
TdaP vaccine: 11/15/16
Flu vaccine: n/a, not currently the flu season
Hepatitis B vaccine: declining
Shingrix: n/a
COVID vaccines: Declining new COVID shot
RSV vaccine: n/a

Screening:
- last pap 5/26/21 -NILM, HPV neg (due 2026)
- last mammogram and ultrasound 4/10/25 - neg
- last colonoscopy 10/18/21 - cleared x 5 yrs (Dr. Selinger)

GAD.
-Last seen for this on 11/15/24.
-At that time, her increased citalopram dose (20mg) was helping
-No side effects. No insomnia since switching to AM dosing
-No longer taking her citalopram. She was traveling a lot for a couple of months and forgot to take it with her. But would like to restart. She thinks it would help with the upcoming transition and with the drinking
-Alprazolam use - sparingly. Worked well when she used it.
-Alprazolam 0.5mg - last refilled 7/17/24 - #15, no refill
-Prior treatment:
-Sertraline 100mg- caused sedation, felt more anxious and uneasy. 50mg was not effective

Mild intermittent asthma.
-Albuterol HFA as needed - rarely needs it.
-Has used it 3 times in the last year.
-Not needing refill, will let me know if/when she needs refill
-Declining PCV20 today

Migraines.
-Controlled mostly with propranolol 10mg daily.
-Takes Sumatriptan as needed - works when she takes it immediately.
-Has not had any migraines for a long time. Not needing triptan refill at this time, will let me know if/when she does

Fear of public speaking. Propranolol 10mg daily is helping.

HSV I. Valacyclovir as needed, works well as needed

Vit D def.
-not taking Vit D
-she spent 2 weeks in HI - outside x 8 hrs/day, wore sunscreen

Abdominal cramping / irritable bowel syndrome.
-Dicyclomine as needed - has not needed to take it.** **
-EGD / colonoscopy 10/18/21 (Dr. Selinger)
** **
GERD.
-Findings seen on EGD.
-Has not been using omeprazole, will let me know if/when she needs refill

Dysphagia.
-Had increased symptoms last year and was referred back to GI.
-Didn't get a chance to see GI last year, would like to re-referral
-No episodes of food getting stuck. Symptoms may be better, definitely not worse.

Health Maintenance items addressed during this visit:
All Health care Maintenance items pended for provider review. See orders for items that patient agreed to perform.

Health Care Maintenance Items:
The following healthcare maintenance items were reviewed regarding risks / benefits and were either accepted or declined.

For those accepted, the appropriate lab tests were ordered, appointments made and / or phone numbers given for patient to follow up.
For those that were declined, the pt declined despite fully understanding that by foregoing this (these) procedure(s), they increase their risk of undiagnosed cancer or disease and a potential missed opportunity for early detection, prevention or treatment.
The patient admits that they understand that this is against medical advice of their doctor and state that they freely choose with

full informed consent to not participate in this screening / testing process.

There are no preventive care reminders to display for this patient.

		ICD-10-CM	
1.	**Preventative health care **	**Z00.00**	**HEMOGRAM (CBC NO DIFF)**
			COMPREHENSIVE METABOLIC PANEL
			LIPID PANEL
			TSH REFLEX TO FT4
2.	Generalized anxiety disorder	F41.1	ALPRAZolam (Xanax) 0.5 MG tab
			citalopram (Celexa) 20 MG tab
3.	Mild intermittent asthma without complication	J45.20	
4.	Migraine without aura and without status migrainosus, not intractable	G43.009	propranolol (Inderal) 10 MG tab
5.	Social phobia involving fear of public speaking	F40.10	
6.	Herpes simplex	B00.9	valACYclovir 1 g tablet tab
7.	Vitamin D deficiency	E55.9	25 OH VITAMIN D
8.	Irritable bowel syndrome with diarrhea	K58.0	
9.	Gastroesophageal reflux disease without esophagitis	K21.9	
10.	Abdominal cramping	R10.9	dicyclomine 10 MG capsule
11.	Other acute gastritis without hemorrhage		
K29.00			
12.	Generalized anxiety disorder	F41.1	ALPRAZolam (Xanax) 0.5 MG tab
			citalopram (Celexa) 20 MG tab
	Sxs much improved on citalopram		
13.	Oropharyngeal dysphagia	R13.12	REFERRAL / CONSULT TO GASTROENTEROLOGY

Health Maintenance Screening:
Diabetes screening: done
Cholesterol screening: done
Pelvic exam: deferred, she is up to date on pap and has no symptoms
Pap smear: up to date , due 2026
Screening mammogram: up to date
Colon cancern screening: up to date, due 10/2026
Bone Density test: n/a

**Vaccines: **
Pneumonia vaccine: PCV20 - declining
TdaP vaccine: 11/15/16
Flu vaccine: n/a, not currently the flu season
Hepatitis B vaccine: declining
Shingrix: n/a
COVID vaccines: Declining new COVID shot
RSV vaccine: n/a

?- See AVS below for management / plan.
- Return to clinic 1 year for complete physical exam. Return to clinic sooner as needed.
- Discussed / reviewed indications, risks, benefits, side effects, and proper use of med(s) given today. Questions / concerns re: medication(s) addressed.
- PDMP reviewed and consistent
- Patient expressed understanding and agreement with above treatment plan.

Make Me the Author Attestation: Preliminary History Recorded by Clinical Staff
Preliminary information is recorded by Clinical Staff.
Recorded information was reviewed for accuracy and edited by Leilani D Paras, MD, who also personally confirmed the chief complaint with patient and completed HPI.

Patient Instructions
Dear Ms.Franklin

Thank you for including me in your health care today.

Here are the diagnoses that we discussed today and what we are doing about it:
[table#28]:
		ICD-10-CM
1.	**Preventative health care **	**Z00.00**
2.	Generalized anxiety disorder	F41.1
3.	Mild intermittent asthma without complication	J45.20
4.	Migraine without aura and without status migrainosus, not intractable	G43.009
5.	Social phobia involving fear of public speaking	F40.10
6.	Herpes simplex	B00.9
7.	Vitamin D deficiency	E55.9
8.	Irritable bowel syndrome with diarrhea	K58.0
9.	Gastroesophageal reflux disease without esophagitis	K21.9
10.	Abdominal cramping	R10.9
11.	Other acute gastritis without hemorrhage	K29.00
12.	Generalized anxiety disorder	F41.1
13.	Oropharyngeal dysphagia	R13.12

**Restart citalopram 20mg - 1/2 tablet daily for 1 wk then increase to 1 tablet daily thereafter. Please send a MYChart message in 1 month to let me know how you're doing. **

Continue current medications

**Please make an appointment with Dr. Selinger **

We're checking labs and will contact you via MyChart

**Please make an appointment for your Mirena IUD - removal and re-insertion of new one. **

**Return to clinic 1 year for complete physical exam, sooner as needed **

Formatting of this note is different from the original.
Dear Ms.Franklin

Thank you for including me in your health care today.

Here are the diagnoses that we discussed today and what we are doing about it:
ICD-10-CM
1. Generalized anxiety disorder F41.1

-Continue citalopram.
-Follow-up via MyChart message in 6 months
-Return to clinic in July for scheduled complete physical exam.
-Return to clinic / call sooner if symptoms increase/change.

Prescriptions Signed In This Encounter
Medications
citalopram (CeleXA) 20 MG tab
Sig: Take 1 tablet by mouth daily.
Dispense: 100 tablet
Refill: 1

No orders of the defined types were placed in this encounter.

Please contact us if you have any questions or issues about your care today, follow-up plan, or response to treatment.

Progress Notes - documented in this encounter

Leilani Paras, MD - 11/15/2024 7:05 AM PST
Formatting of this note might be different from the original.
This **VIDEO** visit was conducted in real time, via synchronous interactive video & audio conferencing technology, utilizing the HIPAA compliant MyChart Epic Video Client Platform.
Patient is located in their home/work/car in the state of Washington.
Leilani D Paras, MD is located in the EFMC FAMILY MEDICINE office and is licensed in the state of Washington.

Discussed with patient/parent: You have chosen to receive care through the use of telemedicine.
Telemedicine enables health care providers at different locations to provide safe, effective, and convenient care through the use of technology.
As with any health care service, there are risks associated with the use of telemedicine, including equipment failure, poor image resolution, and information security issues.
You also understand that I cannot physically examine you and that you may need to come to clinic to complete the assessment.

I have discussed the benefits of MyChart. Patient is already signed up for MyChart.

Patient Verifier : Yvonne Franklin, 6/17/1979
Patient is accompanied by herself in the video visit.

Do you consent to the use of telemedicine in your medical care today? Yes

Patient/parent verbally understands the risks and benefits of telemedicine as explained.
All questions regarding telemedicine answered.

Preferred phone number to contact patient is :360-201-2728

Is it okay to leave a detailed voicemail on this number? Yes

[table#1]:
Subjective:
Yvonne is a 45 y.o. female who presents for:
[table#2]:
Chief Complaint
Patient presents with
•	Medication Mgmt

HPI:
Yvonne is seen via video visit for follow-up anxiety
She was last seen 10/11/24 for this.

At that appointment, we had her:
- she noted an improvement of her symptoms at citalopram 10mg daily
- we had her increase citalopram to 20mg daily
- try switching her citalopram to the morning, since it caused insomnia when she took it at night
- continue use of alprazolam as needed

Since last appointment:
- Her anxiety has improved with 20mg daily dosing. Better overall, doesn't have anxiety 24/7.
- She feels like this is a good dose for her.
- No side effects. No insomnia since she switched to AM dosing
- Use of alprazolam? Has not needed to take it. (Alprazolam 0.5mg - last refilled 7/17/24 - #15, no refill)

[table#3]:
Patient Active Problem List
Diagnosis
•	Abdominal pain
•	Herpes simplex
•	Internal hemorrhoids
•	Migraine headache
•	Premature ventricular contractions
•	Esophageal reflux
•	Social phobia involving fear of public speaking
•	Supraventricular bigeminy
•	Tension-type headache
•	Vitamin D deficiency
•	Generalized anxiety disorder
•	Mild intermittent asthma without complication
•	Allergic rhinitis due to pollen
•	Muscle spasm of back
•	Left breast mass
•	Irritable bowel syndrome with diarrhea
•	Eosinophilic esophagitis
•	Gilbert syndrome

[table#4]:
Social History

[table#5]:
Tobacco Use
•	Smoking status:	Never
		Passive exposure:	Never
•	Smokeless tobacco:	Never
Substance Use Topics
•	Alcohol use:	Not Currently

[table#6]:
Allergies
Allergen	Reactions

| • | Fentanyl | Adverse Drug Reaction |
| • | Propofol | Adverse Drug Reaction |

Current Outpatient Medications:
• citalopram (CeleXA) 20 MG tab
• ALPRAZolam 0.5 MG tablet
• propranolol 10 MG tablet
• dicyclomine 10 MG capsule
• ValACYclovir 1 g tablet
• SUMAtriptan (Imitrex) 100 MG tablet
• albuterol HFA (Proventil, Ventolin, ProAir) 90 MCG/ACT inhaler
• Omeprazole 20 MG delayed release capsule
• Spacer/Aero-Holding Chambers (PRO COMFORT SPACER ADULT) miscellaneous
• Levonorgestrel (Mirena) 52 MG IUD

Review of Systems
negative except as noted in HPI above

Reviewed and updated this visit by provider:
Allergies | Meds | Problems |

[table#7]:
Objective:

Limited Exam via Patient's / Parent's video
Physical Exam
Constitutional:
General: She is not in acute distress.
Pulmonary:
Effort: Pulmonary effort is normal. No respiratory distress.
Neurological:
General: No focal deficit present.
Mental Status: She is alert and oriented to person, place, and time.
Psychiatric:
Mood and Affect: Mood and affect normal.
Speech: Speech normal.
Behavior: Behavior normal. Behavior is cooperative.
Thought Content: Thought content normal.
Judgment: Judgment normal.

[table#8]:
Assessment and Plan:

[table#9]:
		ICD-10-CM	
1.	**Generalized anxiety disorder **	**F41.1**	**citalopram (CeleXA) 20 MG tab**

- See AVS. This is made available online for patient on MyChart since today's visit was a video visit.
-Continue citalopram.
-Follow-up via MyChart message in 6 months
-Return to clinic in July for scheduled complete physical exam.
-Return to clinic / call sooner if symptoms increase/change.
- Discussed / reviewed indications, risks, benefits, side effects, and proper use of med(s) given today. Questions / concerns re: medication(s) addressed.
- Patient expressed understanding and agreement with above treatment plan. ** **

Make Me the Author Attestation: Preliminary History Recorded by Clinical Staff
Preliminary information is recorded by Clinical Staff.
Recorded information was reviewed for accuracy and edited by Leilani D Paras, MD, who also personally confirmed the chief complaint with patient and completed HPI.

Patient Instructions - documented in this encounter

Patient Instructions
Leilani Paras, MD - 10/11/2024 7:23 AM PDT
Formatting of this note is different from the original.
Dear Ms.Franklin

Thank you for including me in your health care today.

Here are the diagnoses that we discussed today and what we are doing about it:
ICD-10-CM
1. Generalized anxiety disorder F41.1

-Increase citalopram to 20mg daily.
-Continue rare use of alprazolam as needed.
-Try switching citalopram to the AM x 1-2 weeks and see if sleep gets better.
- If you cannot tolerate the 20mg dose, please send me a MyChart message and we will try 10mg tablet @ 1.5 tablets daily (15mg dose) to see if you can tolerate it.
- Monitor symptoms.
- Make follow-up appointment 1 month (video visit ok)
- If you're doing well, then message me via MyChart and you can cancel the follow-up appointment in 1 month
- Return to clinic / call sooner if symptoms increase/change

Prescriptions Signed In This Encounter
Medications
citalopram (CeleXA) 20 MG tab
Sig: Take 1 tablet by mouth daily.
Dispense: 100 tablet
Refill: 0

No orders of the defined types were placed in this encounter.

Please contact us if you have any questions or issues about your care today, follow-up plan, or response to treatment.

Progress Notes - documented in this encounter

Leilani Paras, MD - 10/11/2024 6:58 AM PDT
Formatting of this note might be different from the original.

Modified evaluation performed based on CDC protocols for COVID19.
The pros and cons of a video visit for providing this care was reviewed with Yvonne Franklin, and their verbal consent has been given to deliver this visit.

This **VIDEO** visit was conducted in real time, via synchronous interactive video & audio conferencing technology (Epic Video Client),
with patient located at home and, Leilani D Paras, MD located at EFMC FAMILY MEDICINE

Discussed with patient/parent: You have chosen to receive care through the use of telemedicine.
Telemedicine enables health care providers at different locations to provide safe, effective, and convenient care through the use of technology.
As with any health care service, there are risks associated with the use of telemedicine, including equipment failure, poor image resolution, and information security issues.
You also understand that I cannot physically examine you and that you may need to come to clinic to complete the assessment.

I have discussed the benefits of MyChart. Patient is already signed up for MyChart.

Patient Verifier : Yvonne Franklin, 6/17/1979
Patient is accompanied by her self in the video visit.

Do you consent to the use of telemedicine in your medical care today? Yes

Patient/parent verbally understands the risks and benefits of telemedicine as explained.
All questions regarding telemedicine answered.
Preferred phone number to contact patient is :360-201-2728

Is it okay to leave a detailed voicemail on this number? Yes

		Follow up

HPI:
Patient is seen today via video visit for for med check on citalopram 20mg for anxiety
Due to technical difficulties, video visit was done via phone.

-Her citalopram was restarted at her last complete physical exam 7/17/24.
-She is taking 1/2 tablet daily
-She tried to take 1 tablet at night and could not sleep.
Went back to 1/2 tablet and side effects resolved.
-She feels like it's helping but she feels like she could use a little more help from the medication.
-Her husband has noted an improvement in her stress level.
-She also can feel it in her brain, feels like "it's taking over my brain." She's aware it's in her system and in her body.
-She is still hesitant to taking medications for her anxiety. She still feels like she should be able to do it without need for meds.
-Also taking alprazolam 0.5mg as needed. Last refilled on 7/17/24 - #15, no refill
She hasn't used any alprazolam since last visit.

Tolerating 10mg citalopram dose well without side effects

Problem list, medical/surgical history, medications, allergies, immunizations, social and family history reviewed and appropriately updated in Epic.

Patient Instructions - documented in this encounter

Patient Instructions

Leilani Paras, MD - 07/17/2024 12:26 PM PDT
Formatting of this note is different from the original.

Dear Ms.Franklin

Thank you for including me in your health care today.

Here are the diagnoses that we discussed today and what we are doing about it:
ICD-10-CM
1. Preventative health care Z00.00
2. Generalized anxiety disorder F41.1
3. Mild intermittent asthma without complication J45.20
4. Irritable bowel syndrome with diarrhea K58.0
5. Social phobia involving fear of public speaking F40.10
6. Migraine without aura and without status migrainosus, not intractable G43.009
7. Herpes simplex B00.9
8. Gastroesophageal reflux disease without esophagitis K21.9
9. Encounter for general adult medical examination w/o abnormal findings Z00.00
10. Pharyngeal dysphagia R13.13
11. Abdominal cramping R10.9
12. Vitamin D deficiency E55.9

Restart citalopram 20mg daily and as-needed alprazolam.
Follow-up appointment regarding citalopram in 2-3 months (video visit ok)
Continue current medications otherwise
For bone health- make sure to get regular weight bearing exercise, 500 mg calcium twice a day and 1,000 IU Vit D daily.
The calcium is better absorbed through dietary sources. (600 mg of calcium is about 10-12 oz of cheese, milk or yogurt. They have good lists of calcium content in foods online.) But if you aren't getting enough calcium through your diet, then getting it through a supplement is better than not getting enough.
Please make an appointment with Dr. Selinger
Please make an appointment for your mammogram.
Return to clinic 1 year for complete physical exam, sooner as needed

Prescriptions Signed In This Encounter
Medications
Citalopram 20 MG tablet
Sig: Take 1 tablet by mouth daily.
Dispense: 100 tablet
Refill: 0
ALPRAZolam 0.5 MG tablet
Sig: Take 0.5-1 tablets by mouth 2 times daily as needed for anxiety (for panic attacks). May repeat in 6-8 hours if needed. May cause sedation
Dispense: 15 tablet
Refill: 0
propranolol 10 MG tablet
Sig: Take 1 tablet by mouth daily.
Dispense: 100 tablet
Refill: 3
dicyclomine 10 MG capsule
Sig: Take 1 capsule by mouth 4 times daily as needed (colonic spasms).
Dispense: 30 capsule
Refill: 3
ValACYclovir 1 g tablet
Sig: 2 tablets Q12 hrs x 1 day as needed herpes outbreak
Dispense: 8 tablet
Refill: 3
SUMAtriptan (Imitrex) 100 MG tablet
Sig: TAKE 1 TABLET BY MOUTH AT ONSET OF HEADACHE, MAY TAKE 1 AND REPEAT IN 2 HOURS IF HEADACHE REMAINS, MAX 2 TABLETS PER 24 HOURS
Dispense: 9 tablet

Refill: 5
albuterol HFA (Proventil, Ventolin, ProAir) 90 MCG/ACT inhaler
Sig: Take 2 puffs by inhalation every 4 to 6 hours as needed for wheezing or shortness of breath. Not to exceed 10 puffs/24 hours.
Dispense: 18 g
Refill: 2
May sub ProAir, Proventil or Ventolin at same directions, same refills.

Additional orders placed in this encounter
Procedures
CBC no diff
Comprehensive metabolic panel
Lipid
TSH REFLEX TO FT4
VIT D (12 OH VITAMIN D)
REFERRAL / CONSULT TO GASTROENTEROLOGY

Please contact us if you have any questions or issues about your care today, follow-up plan, or response to treatment.

Progress Notes - documented in this encounter

Leilani Paras, MD - 07/17/2024 11:49 AM PDT
Formatting of this note might be different from the original.
[table#1]:
Subjective:
Patient is a 45 y.o. female who presents for a complete physical exam. Current concerns include: endoscopy/somach issues , pre menopause?, anxiety

Concerns: see below

Diet: Healthy overall, hubby is a good chef
Exercise: Poorly, no exercise because of work
Sleep: sleeps efficiently when she does sleep between 12-6AM
Voiding: No issues with urination or BMs. No rectal bleeding

Work: New job 1.5 years ago - it's worse than her last one, no work/life balance, stressful. Working around the clock, works 8AM-6PM, then works again at night from 8PM- midnight. She's burned out. Works on the weekend. Has made her more anxious
Household: Lives with husband and 2 kids
EtOH: 1 glass of wine daily - it helps her relax
Tobacco: None
Drug: None

Menstruation: no menses on Mirena IUD
Sexually activity / contraception: Mirena IUD - placed in 2017 (needing replacement 2025)

Immunizations:
Pneumonia vaccine: PCV20 - declining
TdaP vaccine: 11/15/16
Flu vaccine: n/a, not currently the flu season
Hepatitis B vaccine: declining
Shingrix: n/a
COVID vaccines: Declining new COVID shot
RSV vaccine: n/a

Screening:
- last pap 5/26/21 -NILM, HPV neg
- last mammogram and ultrasound 12/29/21 - recommended short interval follow-up ultrasound 6mos for left breast (Evergreen). Will make an appointment for mammogram
- last colonoscopy 10/18/21 - cleared x 5 yrs (Dr. Selinger)

Medications as noted below. Working well without side effects.

Had breast reduction 2 years ago
Path was normal.
Will schedule mammogram at Evergreen

Perimenopause.
Sometimes forgetful but she realizes that this is likely stress related.
No other symptoms - including no hot flashes, night sweats, or sleep issues

GAD.
Had been on citalopram 20mg - had decreased libido but symptoms were tolerable. She never did bump up to 30mg daily dose.
She stopped taking citalopram last year
She has a constant internal fight on whether to take medication or not, so she stopped.
She realizes now that she needs to stop fighting it and restart her medication.
She is open to doing that today
Had also been on alprazolam 0.5mg as needed in the past - last refilled on 2/15/23 - #15, no refill
We reviewed the potential for addiction and abuse with alprazolam. She expressed understanding

Prior treatment:
Sertraline 100mg- caused sedation, felt more anxious and uneasy. 50mg was not effective

Mild intermittent asthma.
Albuterol HFA as needed - rarely needs it.
Does not recall the last time she used her inhaler, had used it max once a year when she used it. The last time she used it was at least > 1 year ago
Needing refill because her current inhaler is expired
Declining PCV20 today

Migraines.
Controlled mostly with propranolol 10mg daily. Takes Sumatriptan as needed - works when she takes it immediately.
No increase in migraines despite increased stressors

Fear of public speaking. Propranolol 10mg daily is helping.

HSV I. Valacyclovir as needed, works well as needed

Abdominal cramping / irritable bowel syndrome.
Dicyclomine as needed - has not needed to take it.
Needing refill because hers are likely expired

EGD / colonoscopy 10/18/21 (Dr. Selinger)

GERD. Findings seen on EGD.
Has not been using omeprazole because she's not having issues. Will let me know if she needs refill

Dysphagia.
Wonders if she needs another endoscopy -
For the last 3 months, she has noted:
(1) a tightening in her throat after eating. Not extreme, stays for a few minutes and then resolves. Does not feel her airway is closing.
(2) Feels like things get stuck more often after swallowing, despite cutting up her food well

Vit D def.
Has not been taking Vit D

[table#2]:
GAD-7 --- Anxiety --- last 2 weeks
**Anxiety is likely if: **
(A)at least 1 of the f
irst 2 items(GAD-2) is present **and** the Sum of the first 2 items is > 3
(B) at least a score of 5 points or greater for all items is present.
The overall ***Anxiety Severity*** is the **sum** of ratings of all the 7 items

PATIENT'S TOTALS ***6 *: *15* ** ** **

Cut-offs for severity of Anxiety: **3 : 5 ** ** **

GAD-2 score = *6 *
**>3 **pts suggests anxiety

Anxiety Severity = *15*
[table#3]:
| **0 - 4** | Generalized Anxiety
Disorder: None | No treatment recommended (or Continue current maintenance treatment) |
| --- | --- | --- |
| **5 - 9** | Mild | Counseling (or Consider adjusting current treatment) |
| **10 - 14** | Moderate | Medication and/or Counseling; evaluate for other anxiety disorders such as panic disorder, or PTSD |
| ** 15 - 21** | Severe | Medication, Counseling, evaluate for other anxiety disorders such as panic disorder, or PTSD; consider referral to Psychiatry |

[table#4]:
|
5/26/2021	2/15/2023	5/26/2023	7/17/2024

Make Me the Author Attestation: Preliminary History Recorded by Clinical Staff
Preliminary information is rec
orded by Clinical Staff. Recorded information was reviewed for accuracy and edited by Leilani D Paras, MD, who also personally confirmed the chief complaint with patient and completed HPI.

[table#16]:
Objective:
BP 102/62 | Pulse 78 | Temp 97.5 °F (36.4 °C) | Ht 5' 5" (1.651 m) | Wt 125 lb 12.8 oz (57.1 kg) | BMI 20.93 kg/m²

Physical Exam
Vitals reviewed.
Constitutional:
General: She is not in acute distress.
HENT:
Head: Normocephalic and atraumatic.
Right Ear: Tympanic membrane, ear canal and external ear normal.
Left Ear: Tympanic membrane, ear canal and external ear normal.
Nose: Nose normal.
Mouth/Throat:
Mouth: Mucous membranes are moist.
Eyes:
Conjunctiva/sclera: Conjunctivae normal.
Pupils: Pupils are equal, round, and reactive to light.
Neck:
Thyroid: No thyroid mass, thyromegaly or thyroid tenderness.
Cardiovascular:
Rate and Rhythm: Normal rate and regular rhythm.
Heart sounds: Normal heart sounds.
Pulmonary:
Effort: Pulmonary effort is normal.
Breath sounds: Normal breath sounds.
Chest:
Breasts:
Right: Normal. No mass, nipple discharge, skin change or tenderness.
Left: Normal. No mass, nipple discharge, skin change or tenderness.
Comments: **Well-healed scars s/p breast reduction bilaterally**
Abdominal:
General: Bowel sounds are normal.
Palpations: Abdomen is soft. There is no mass.
Tenderness: There is no abdominal tenderness. There is no guarding or rebound.
Musculoskeletal:
Right lower leg: No edema.
Left lower leg: No edema.
Lymphadenopathy:
Cervical: No cervical adenopathy.
Upper Body:
Right upper body: No supraclavicular or axillary adenopathy.
Left upper body: No supraclavicular or axillary adenopathy.
Skin:
General: Skin is warm.
Capillary Refill: Capillary refill takes less than 2 seconds.
Neurological:
General: No focal deficit present.
Mental Status: She is alert and oriented to person, place, and time.
Psychiatric:
Mood and Affect: Affect normal. Mood is anxious.
Speech: Speech normal.
Behavior: Behavior normal. Behavior is cooperative.
Thought Content: Thought content normal.
Judgment: Judgment normal.

Hepatitis B vaccine: declining
Shingrix: n/a
COVID vaccines: Declining new COVID shot
RSV vaccine: n/a

- See AVS below for management / plan.
- Restart citalopram 20mg daily and as-needed alprazolam
- Follow-up appointment regarding citalopram in 2-3 months (video visit ok)
- Return to clinic 1 year for complete physical exam. Return to clinic sooner as needed.
- Discussed / reviewed indications, risks, benefits, side effects, and proper use of med(s) given today. Questions / concerns re: medication(s) addressed.
- PDMP reviewed and consistent

- Patient expressed understanding and agreement with above treatment plan.

[table#21]:
Patient Instructions
Dear Ms.Franklin

Thank you for including me in your health care today.

Here are the diagnoses that we discussed today and what we are doing about it:
[table#22]:
		ICD-10-CM
1.	**Preventative health care **	**Z00.00**
2.	Generalized anxiety disorder	F41.1
3.	Mild intermittent asthma without complication	J45.20
4.	Irritable bowel syndrome with diarrhea	K58.0
5.	Social phobia involving fear of public speaking	F40.10
6.	Migraine without aura and without status migrainosus, not intractable	G43.009
7.	Herpes simplex	B00.9
8.	Gastroesophageal reflux disease without esophagitis	K21.9
9.	Encounter for general adult medical examination w/o abnormal findings	Z00.00
10.	Pharyngeal dysphagia	R13.13
11.	Abdominal cramping	R10.9
12.	Vitamin D deficiency	E55.9

**Restart citalopram 20mg daily and as-needed alprazolam. **
Follow-up appointment regarding citalopram in 2-3 months (video visit ok)
**Continue current medications otherwise **
For bone health- make sure to get regular weight bearing exercise, 500 mg calcium twice a day and 1,000 IU Vit D daily.
**The calcium is better absorbed through dietary sources. (600 mg of calcium is about 10-12 oz of cheese, milk or yogurt. They have good lists of calcium content in foods online.) But if you aren't getting enough calcium through your diet, then getting it through a supplement is better than not getting enough. **
**Please make an appointment with Dr. Selinger **
**Please make an appointment for your mammogram. **
**Return to clinic 1 year for complete physical exam, sooner as needed **

[table#23]:
Prescriptions Signed In This Encounter
Medications
•	Citalopram 20 MG tablet
		Sig: Take 1 tablet by mouth daily.
		Dispense: 100 tablet
		Refill: 0
•	ALPRAZolam 0.5 MG tablet
		Sig: Take 0.5-1 tablets by mouth 2 times daily as needed for anxiety (for panic attacks). May repeat in 6-8 hours if needed. May cause sedation
		Dispense: 15 tablet
		Refill: 0
•	propranolol 10 MG tablet
		Sig: Take 1 tablet by mouth daily.
		Dispense: 100 tablet
		Refill: 3
•	dicyclomine 10 MG capsule
		Sig: Take 1 capsule by mouth 4 times daily as needed (colonic spasms).
		Dispense: 30 capsule
		Refill: 3
•	ValACYclovir 1 g tablet
		Sig: 2 tablets Q12 hrs x 1 day as needed herpes outbreak
		Dispense: 8 tablet
		Refill: 3
•	SUMAtriptan (Imitrex) 100 MG tablet
		Sig: TAKE 1 TABLET BY
MOUTH AT ONSET OF HEADACHE, MAY TAKE 1 AND REPEAT IN 2 HOURS IF HEADACHE REMAINS, MAX 2 TABLETS PER 24 HOURS
		Dispense: 9 tablet
		Refill: 5
•	albuterol HFA (Proventil, Ventolin, ProAir) 90 MCG/ACT inhaler
		Sig: Take 2 puffs by inhalation every 4 to 6 hours as needed for wheezing or shortness of breath. Not to exceed 10 puffs/24

hours. |
		Dispense: 18 g
		Refill: 2
		May sub ProAir, Proventil or Ventolin at same directions, same refills.

Patient Instructions

Denise Kraft, MD - 02/21/2024 7:52 AM PST
Formatting of this note is different from the original.
Dear Ms.Franklin

Thank you for including me in your health care today.

Here are the diagnoses that we discussed today and what we are doing about it:
ICD-10-CM
1. Impacted cerumen of right ear H61.21

(H61.21) Impacted cerumen of right ear (primary encounter diagnosis)
Comment: monitor
Plan: EAR WAX REMOVAL
Try Debrox or Cerumenex weekly to see if can help prevent build up of wax

Return in 6 months for follow-up as needed or sooner as needed.

Please contact us if you have any questions or issues about your care today, follow-up plan, or response to treatment.

Denise S Kraft, MD

Progress Notes - documented in this encounter

Rebecca B, MA - 02/21/2024 6:42 AM PST
Formatting of this note might be different from the original.

Modified evaluation performed based on CDC protocols for COVID19.

Benefits/Risks for this **OUTPATIENT / IN PERSON **visit discussed with Patient prior to scheduling, reviewed with Patient again today.

Protocols to promote social distancing measures and reduction of infection risk including hand hygiene and PPE-use were followed.

This patient is unaccompanied in the exam room. Patient was masked.

Clinical staff is masked using a surgical mask

[table#1]:
SUBJECTIVE
Yvonne Franklin is a 44 y.o. female who presents for:
[table#2]:
| **Chief Complaint** |

| --- |
| Patient presents with |
| • | Ear Fullness |

HPI: ear wax

Patient's ears feel full and she thinks that she has ear wax and she is here for the removal.- she has this frequently and needs them cleaned

Problem list, medical/surgical history, medications, allergies, immunizations, social and family history reviewed and appropriately updated in Epic.
[table#3]:
Patient Active Problem List
Diagnosis
•	Abdominal pain
•	Herpes simplex
•	Internal hemorrhoids
•	Migraine headache
•	Premature ventricular contractions
•	Esophageal reflux
•	Social phobia involving fear of public speaking
•	Supraventricular bigeminy
•	Tension-type headache
•	Vitamin D deficiency
•	Generalized anxiety disorder
•	Mild intermittent asthma without complication
•	Allergic rhinitis due to pollen
•	Muscle spasm of back
•	Left breast mass
•	Irritable bowel syndrome with diarrhea
•	Eosinophilic esophagitis
•	Gilbert syndrome

[table#4]:
Health Maintenance Due
Topic	Date Due
•	IMMUNIZATION: HEPATITIS B (1 of 3 - 3-dose series)	Never done
•	IMMUNIZATION: Pneumococcal Vaccine (1 of 2 - PCV)	Never done
•	Immunization: COVID-19 (4 - 2023-24 season)	09/01/2023
•	IMMUNIZATION: Influenza (1)	10/01/2023

**Current Medication & Allergy: **
[table#5]:
Current Outpatient Medications
Medication	Sig	Dispense	Refill
•	Omeprazole 20 MG delayed release capsule	Take 1 capsule by mouth daily 30 minutes prior to a meal.	90 capsule	3
•	Citalopram 20 MG tablet	Take 1.5 tablets by mouth daily.	150 tablet	0
•	propranolol 10 MG tablet	Take 1 tablet by mouth daily.	100 tablet	3

Review of Systems
Constitutional: Negative for activity change, appetite change, chills, fatigue and fever.
HENT: Negative for congestion, ear pain, rhinorrhea and sinus pain.
Eyes: Negative.
Respiratory: Negative for apnea, cough, chest tightness, shortness of breath and wheezing.
Cardiovascular: Negative for chest pain, palpitations and leg swelling.

Gastrointestinal: Negative for abdominal pain, constipation, diarrhea, nausea and vomiting.
Endocrine: Negative. Negative for polyuria.
Genitourinary: Negative for dysuria, enuresis, flank pain, frequency, urgency and vaginal pain.
Musculoskeletal: Negative for arthralgias, back pain and neck pain.
Skin: Negative for pallor, rash and wound.
Neurological: Negative for syncope, weakness, light-headedness and headaches.
Hematological: Does not bruise/bleed easily.
Psychiatric/Behavioral: Negative for agitation, behavioral problems, confusion and sleep disturbance.

[table#13]:
OBJECTIVE
BP 98/62 (Arm: LEFT, Position: SITTING) | Pulse 78 | Temp 97.3 °F (36.3 °C) (Temporal) | Resp 16 | Ht 5' 5.25" (1.657 m) | Wt 129 lb (58.5 kg) | BMI 21.30 kg/m^2

Physical Exam
Vitals and nursing note reviewed.
Constitutional:
Appearance: Normal appearance.
HENT:
Head: Normocephalic and atraumatic.
Right Ear: Tympanic membrane and ear canal normal. There is impacted cerumen.
Left Ear: Tympanic membrane, ear canal and external ear normal.
Mouth/Throat:
Mouth: Mucous membranes are moist.
Eyes:
Conjunctiva/sclera: Conjunctivae normal.
Pupils: Pupils are equal, round, and reactive to light.
Cardiovascular:
Rate and Rhythm: Normal rate and regular rhythm.
Pulses: Normal pulses.
Heart sounds: Normal heart sounds.
Pulmonary:
Effort: Pulmonary effort is normal.
Breath sounds: Normal breath sounds. No wheezing or rales.
Abdominal:
General: Abdomen is flat. Bowel sounds are normal.
Palpations: There is no mass.
Tenderness: There is no rebound.
Hernia: No hernia is present.
Musculoskeletal:
General: Normal range of motion.
Cervical back: Normal range of motion and neck supple.
Skin:
General: Skin is warm and dry.
Coloration: Skin is not jaundiced.
Findings: No bruising or lesion.
Neurological:
General: No focal deficit present.
Mental Status: She is aler
t and oriented to person, place, and time.
Cranial Nerves: No cranial nerve deficit.
Gait: Gait normal.
Psychiatric:
Mood and Affect: Mood normal.
Behavior: Behavior normal.

Wax was partially removed with curetting and then the right canal was irrigated. The canal was totally cleared fo wax

[table#14]:
ASSESSMENT and PLAN

(H61.21) Impacted cerumen of right ear (primary encounter diagnosis)
Comment: monitor
Plan: EAR WAX REMOVAL
Try Debrox or Cerumenex weekly to see if can help prevent build up of wax

Return in 6 months for follow-up as needed or sooner as needed.

- Patient reminded about the importance of annual preventative care appointments.

- Discussed with patient (and guardian/parent if applicable) with treatment recommendations, any medication information (including risk and benefits of antibiotics/medication if prescribed), strict return precautions given, and when to seek immediate medical attention. Additionally, AVS printed for patient or made available online for patient on MyChart unless patient declined.

- The concerns and questions of the patient (and guardian/parent if applicable) were addressed. The patient (and guardian/parent if applicable) verbally demonstrated understanding of and agreement with the plan.

Make Me the Author Attestation: Preliminary History Recorded by Clinical Staff
Preliminary information is recorded by Clinical Staff.
Recorded information was reviewed for accuracy and edited by Denise S Kraft, MD, who also personally confirmed the chief complaint with patient and completed HPI.

Patient Instructions

Denise Kraft, MD - 01/10/2024 11:01 AM PST
Formatting of this note is different from the original.
Dear Ms.Franklin

Thank you for including me in your health care today.

Here are the diagnoses that we discussed today and what we are doing about it:
ICD-10-CM
1. Upper respiratory tract infection, unspecified type J06.9

No new prescriptions were ordered during this visit.

Additional orders placed in this encounter
Procedures
COVID-19 (POINT OF CARE) NAAT
GROUP A STREP, NAAT

(J06.9) Upper respiratory tract infection, unspecified type (primary encounter diagnosis)
Comment: stable
Plan: GROUP A STREP, NAAT, COVID-19 (POINT OF CARE)
NAAT
See Handout

(J02.0) Strep pharyngitis
Comment: monitor symptoms
Plan: Amoxicillin 500 MG capsule
Do salt water gargles

Return in 4 weeks for follow-up or sooner as needed.

PATIENT INSTRUCTIONS
- FOR -
UPPER RESPIRATORY INFECTION

An upper respiratory tract infection (cold or influenza) is usually caused by a virus. Antibiotics such as penicillin do not kill viruses which cause the common cold and influenza. Any respiratory infection is more or less "catching", so don't share spoons, cups, or kisses with others until you are well. In general, follow these three basic rules: (1) Keep warm and rest as much as possible. If you feel like resting, you should. (2) Take plenty of fluids. Food is not as important since appetite will return when you are well. (3) For fever, take Tylenol or Motrin in normal doses (see label on the bottle).

If nausea and/or diarrhea are present: Eat only clear liquids, soups, or juices as tolerated. Remember fluids are important to prevent dehydration.

If temperature is elevated: Fluids are doubly important. Fever medicine (such as Tylenol) should control temperature. Persistent temperature elevation of 103-104 degrees F is a danger sign.

If throat is sore: Your doctor may have cultured your throat to ensure that you do not have strep. Gargle with warm water (1/2 tsp salt in 1/2 glass of water). Try cold packs to the outside of your throat to help ease the pain of swallowing.

If your throat or nasal lining is dry: Humidification of the air you breathe (use vaporizer, pans of evaporating water, or steaming tub or shower) and lots of fluids help.

If cough is present: Drinking lots of fluids helps to moisten and loosen up sticky mucus. Non-prescription drugs designed to suppress cough are occasionally helpful. Secretions need to be coughed out of the lungs. One can best do this by (1) moistening your airways with very moist air; (2) roll from side to side on a bed; (3) cough vigorously to remove mucus and mucus plugs.

If you get worse: Simple upper respiratory tract infections rarely progress to a serious problem such as pneumonia or ear infection. Call your doctor if you are worse or if you notice: (1) very high fever despite fever medication; (2) bloody sputum or increasing chest pain; (3) increasing difficulty getting your breath; (4) stiff neck preventing bending neck and placing chin on chest; (5) drainage from ear or sinuses; (6) pain in your ears.

Return in 4 weeks for follow-up or sooner as needed.

Please contact us if you have any questions or issues about your care today, follow-up plan, or response to treatment.

Jocelyn P, MA - 01/10/2024 10:35 AM PST
Formatting of this note might be different from the original.

Modified evaluation performed based on CDC protocols for COVID19.

Benefits/Risks for this **OUTPATIENT / IN PERSON **visit discussed with Patient prior to scheduling, reviewed with Patient again today.

Protocols to promote social distancing measures and reduction of infection risk including hand hygiene and PPE-use were followed.

This patient is unaccompanied in the exam room. Patient was masked.

Clinical staff is masked using a surgical mask

[table#1]:
SUBJECTIVE
Yvonne Franklin is a 44 y.o. female who presents for:
[table#2]:
Chief Complaint
Patient presents with
•	URI
		*X 3 days *

HPI: upper respiratory illness-

Upper respiratory illness-s he notes her symptoms started about 3 d ago - the worst part is the ST and she is taking a lot of Ibuprofen. She has had some fever to 99.3

NO COVID testing done

Has not received seasonal covid or flu vaccines

Will discuss testing with Doctor, see if necessary

**Upper Respiratory symptoms: **
Onset of symptoms was 3 days, and symptoms have been unchanged.
Has no cough.
Has sore throat.
Had fever one day
Has no sputum production.
Has no face pain.

Current smoker? No. History of Smoking? No.

New Associated Symptoms:
Has no shortness of breath.
Has no chest pain.
Has no nausea / vomiting.
Has no history of Asthma or COPD.

The Patient is masked.
Clinical staff is masked.

Evaluation /Treatment to date: not previously seen.
Additional Symptoms: None.
Symptoms improved by:nothing.
Symptoms worsened by: nothing.

Problem list, medical/surgical history, medications, allergies, immunizations, social and family history reviewed and appropriately updated in Epic.
[table#3]:
Patient Active Problem List
Diagnosis
•	Abdominal pain
•	Herpes simplex
•	Internal hemorrhoids

Review of Systems
Constitutional: Positive for fever. Negative for activity change, appetite change, chills and fatigue.
HENT: Positive for sore throat. Negative for congestion, ear pain, rhinorrhea and sinus pain.
Eyes: Negative.
Respiratory: Negative for apnea, cough, chest tightness, shortness of breath and wheezing.
Cardiovascular: Negative for chest pain, palpitations and leg swelling.
Gastrointestinal: Negative for abdominal pain, constipation, diarrhea, nausea and vomiting.
Endocrine: Negative. Negative for polyuria.
Genitourinary: Negative for dysuria, enuresis, flank pain, frequency, urgency and vaginal pain.
Musculoskeletal: Negative for arthralgias, back pain and neck pain.
Skin: Negative for pallor, rash and wound.
Neurological: Negative for syncope, weakness, light-headedness and headaches.
Hematological: Does not bruise/bleed easily.
Psychiatric/Behavioral: Negative for agitation, behavioral problems, confusion and sleep disturbance.

[table#13]:
OBJECTIVE
BP 100/60 (Arm: RIGHT, Position: SITTING, Cuff Size: ADULT) | Pulse 72 | Temp 97.2 °F (36.2 °C) (Temporal) | Wt 130 lb 3.2 oz (59.1 kg) | LMP (LMP Unknown) | BMI 21.50 kg/m^2

Physical Exam
Vitals and nursing note reviewed.
Constitutional:
Appearance: Normal appearance.
HENT:
Head: Normocephalic and atraumatic.
Right Ear: Tympanic membrane and ear canal normal.
Left Ear: Tympanic membrane and ear canal normal.
Nose: Nose normal.
Mouth/Throat:
Mouth: Mucous membranes are moist.
Eyes:
Conjunctiva/sclera: Conjunctivae normal.
Pupils: Pupils are equal, round, and reactive to light.
Cardiovascular:
Rate and Rhythm: Normal rate and regular rhythm.
Pulses: Normal pulses.
Heart
sounds: Normal heart sounds.
Pulmonary:
Effort: Pulmonary effort is normal.
Breath sounds: Normal breath sounds. No wheezing or rales.
Abdominal:
General: Abdomen is flat. Bowel sounds are normal.
Palpations: There is no mass.
Tenderness: There is no rebound.
Hernia: No hernia is present.
Musculoskeletal:
General: Normal range of motion.
Cervical back: Normal range of motion and neck supple.
Skin:
General: Skin is warm and dry.
Coloration: Skin is not jaundiced.
Findings: No bruising or lesion.
Neurological:
General: No focal deficit present.
Mental Status: She is alert and oriented to person, place, and time.
Cranial Nerves: No cranial nerve deficit.

Gait: Gait normal.
Psychiatric:
Mood and Affect: Mood normal.
Behavior: Behavior normal.

[table#14]:
ASSESSMENT and PLAN

(J06.9) Upper respiratory tract infection, unspecified type (primary encounter diagnosis)
Comment: stable
Plan: GROUP A STREP, NAAT, COVID-19 (POINT OF CARE)
NAAT
See Handout

(J02.0) Strep pharyngitis
Comment: monitor symptoms
Plan: Amoxicillin 500 MG capsule
Do salt water gargles

Return in 4 weeks for follow-up or sooner as needed.

- Patient reminded about the importance of annual preventative care appointments.

- Discussed with patient (and guardian/parent if applicable) with treatment recommendations, any medication information (including risk and benefits of antibiotics/medication if prescribed), strict return precautions given, and when to seek immediate medical attention. Additionally, AVS printed for patient or made available online for patient on MyChart unless patient declined.

- The concerns and questions of the patient (and guardian/parent if applicable) were addressed. The patient (and guardian/parent if applicable) verbally demonstrated understanding of and agreement with the plan.

Make Me the Author Attestation: Preliminary History Recorded by Clinical Staff
Preliminary information is recorded by Clinical Staff.
Recorded information was reviewed for accuracy and edited by Denise S Kraft, MD, who also personally confirmed the chief complaint with patient and completed HPI.

Comment:
Negative results do not preclude SARS-CoV-2 infection and should not be used as the sole basis for patient management decisions. Negative results must be combined with clinical observations, patient history and epidemiological information.

The Abbott ID NOW point-of-care assay is a real-time isothermal nucleic acid amplification test intended for the qualitative detection of nucleic acid from the SARS-CoV-2 in respiratory swabs from suspected infected patients. This test has not been FDA cleared or approved. This test has been authorized by the FDA under an Emergency Use Authorization (EUA) and can only be used in that capacity.

Notes:
++++++++++++++++++++++++++++++++++++++

When you download your health or visit summary documents, several files are compressed into a single ZIP file so they can
be transferred quickly. You need to uncompress (unzip) this file before you can view your documents. Refer to steps below
for uncompressing your download. A PDF file was included with your download and provides the easiest way to view the
contents of this document. Your download also includes files in the IHE_XDM folder with names starting with 'DOC'.
These files let other healthcare software applications understand the data in the documents. If you chose to encrypt your
download, it will only remain encrypted until you unzip it. To continue protecting your data when you are done viewing
it, locate the unzipped folder and delete it.

++++++++++++++++++++++++++++++++++++++

Folder Contents:
++++++++++++++++++++++++++++++++++++++

+ INDEX.HTM - Clinical Document viewer
+ README - Open for Instructions.TXT - This file
+ HTML - Resources for viewing INDEX.HTM and clinical documents
+ IMAGES
+ address.png
+ LucyDrive.png
+ LucyLogo.png
+ org.png
+ PageBackground.png
+ PageFooter.png
+ PageTop.png
+ phone.png
+ STYLE
+ lucy.css
+ lucy_colors.css
+ IHE_XDM - Folder containing your clinical documents
+ YOURNAME1
+ DOC*.XML - These are your actual clinical documents
+ METADATA.XML - File containing information about all of the clinical documents in this folder
+ {part} of {whole} - My Health Summary.PDF - PDF containing the contents of your clinical documents

++++++++++++++++++++++++++++++++++++++

How to uncompress your library:
++

Windows Instructions
If your download was not encrypted:
These steps assume that you use the features that come with your operating system.
You can also use another program, such as 7-Zip, to manage compressed files.
1. When you downloaded the document library, you selected a location for the library. Open that location with Windows Explorer.
2. Right-click the compressed file to open the shortcut menu.
3. Choose Extract All to open the Extraction Wizard.
4. Click Next.
5. Select a destination directory for the files. For example, you can enter C:\Lucy to create a Lucy folder for the documents.
6. Click Next. The files in your document library are uncompressed and created in the location you entered.

7. Click Finish to close the Extraction Wizard.
If your download was encrypted:
You need to use a program such as 7-Zip to unzip the file.
You can download 7-Zip here: https://www.7-zip.org/download.html

MacOS Instructions
If your download was not encrypted:
These steps assume that you use the features that come with your operating system.
You can also use another program, such as Stuffit Expander, to manage compressed files.
1. When you downloaded the document library, you selected a location for the library. Open that location.
2. Right-click the compressed file on your Desktop to open the shortcut menu.
3. Select Open. The files in your document library are uncompressed and appear in a folder on your Desktop.
If your download was encrypted:
You need to use a program such as Keka to unzip the file.
You can download Keka here: https://www.keka.io/

Linux Instructions
These steps are based on Ubuntu. Other distributions might have different steps.
1. When you downloaded the document library, you selected a location for the library. Open that location with Archive Manager.
2. Right-click the compressed file to open the shortcut menu.
3. Click Extract Here. The files in your document library are uncompressed and appear in the current working directory.
To extract files from a command line, enter unzip <filename>.zip.
If your download was encrypted:
You need to use a program such as p7zip to unzip the file.
You can download p7zip here: https://p7zip.sourceforge.net/

EXAM:
THORACIC SPINE RADIOGRAPHY

EXAM DATE: 5/11/2026 05:41 PM

CLINICAL HISTORY: Right sided thoracic back pain x 3 months, radiates anterior.

COMPARISON: None.

TECHNIQUE: 2 views.

FINDINGS:
Alignment: Normal. No spondylolisthesis or scoliosis.

Bones: No fractures or bone lesions.

Disks: Normal. Disk heights are maintained.

Soft Tissues: Normal. The visualized lungs and cardiomediastinal silhouette are normal.

Procedure Note

EXAM:
CERVICAL SPINE RADIOGRAPHY

EXAM DATE: 5/11/2026 05:41 PM

HISTORY: Thoracic back pain - right sided, + cervical maneuvers. Eval for facet disease and stability

COMPARISONS: None.

TECHNIQUE: AP, lateral neutral, flexion, extension, and bilateral oblique views.

FINDINGS:
Alignment: Normal. No spondylolisthesis or scoliosis. No abnormal motion with flexion or extension.

Bones: The cervical vertebral bodies and posterior elements are well visualized from the skull base through C7-T1. No fractures or bone lesions.

Disks: Mild degenerative disk disease is present at C5-C6.

Facets: No degenerative disease. No significant facet arthropathy without osseous neural foraminal narrowing.

Soft Tissues: Normal. No prevertebral soft tissue swelling. The visualized lung apices are clear.

Procedure Note

EXAM:
ABDOMEN ULTRASOUND

EXAM DATE: 09/13/2021 08:12 AM.

CLINICAL HISTORY: 42-year-old female with change in bowel habits and dysphagia, please evaluate.

COMPARISON: None.

TECHNIQUE: Real-time scanning was performed with static images obtained.

FINDINGS:
Liver: Normal in size and echotexture measuring 15.8 cm in length. No suspicious liver mass evident. The liver contour is smooth.
Main portal vein flow: Hepatopetal.

Gallbladder: Normal in appearance. No stones, wall thickening, or sonographic Murphy's sign.

Biliary System: Common bile duct measures 3 mm. No intrahepatic or extrahepatic ductal dilatation.

Pancreas: Visualized portion is unremarkable.

Kidneys:
Right: 11.6 cm longitudinally. Normal echotexture. No contour-deforming solid mass, stones, or hydronephrosis.
Left: 12.0 cm longitudinally. Normal echotexture. No contour-deforming solid mass, stones, or hydronephrosis.

Spleen: 8.6 cm. Normal in size and echotexture.

Aorta and Inferior Vena Cava: Unremarkable.

Other: No ascites evident.

Procedure Note

• Appointment for Abdomen Ultrasound (US ABDOMEN COMPLETE) - Final result (09/13/2021 8:12 AM PDT)

Anatomical Region Laterality Modality

Abdomen Ultrasound

Specimen (Source) Anatomical Location / Laterality Collection Method / Volume Collection Time Received Time

09/13/2021 8:12 AM PDT

Impressions

09/13/2021 9:26 AM PDT

1. Normal abdominal ultrasound.
2. Specifically, normal-appearing gallbladder. No gallstones or biliary ductal dilation is seen.
3. No definitive cause for the patient's symptoms appreciated.

EXAM:
ABDOMEN ULTRASOUND

EXAM DATE: 09/13/2021 08:12 AM.

CLINICAL HISTORY: 42-year-old female with change in bowel habits and dysphagia, please evaluate.

COMPARISON: None.

TECHNIQUE: Real-time scanning was performed with static images obtained.

FINDINGS:
Liver: Normal in size and echotexture measuring 15.8 cm in length. No suspicious liver mass evident. The liver contour is smooth.
Main portal vein flow: Hepatopetal.

Gallbladder: Normal in appearance. No stones, wall thickening, or sonographic Murphy's sign.

Biliary System: Common bile duct measures 3 mm. No intrahepatic or extrahepatic ductal dilatation.

Pancreas: Visualized portion is unremarkable.

Kidneys:
Right: 11.6 cm longitudinally. Normal echotexture. No contour-deforming solid mass, stones, or hydronephrosis.
Left: 12.0 cm longitudinally. Normal echotexture. No contour-deforming solid mass, stones, or hydronephrosis.

Spleen: 8.6 cm. Normal in size and echotexture.

Aorta and Inferior Vena Cava: Unremarkable.

Other: No ascites evident.

Procedure Note

EXAM:
ABDOMEN ULTRASOUND

EXAM DATE: 09/13/2021 08:12 AM.

CLINICAL HISTORY: 42-year-old female with change in bowel habits and dysphagia, please evaluate.

COMPARISON: None.

TECHNIQUE: Real-time scanning was performed with static images obtained.

FINDINGS:
Liver: Normal in size and echotexture measuring 15.8 cm in length. No suspicious liver mass evident. The liver contour is smooth.
Main portal vein flow: Hepatopetal.

Gallbladder: Normal in appearance. No stones, wall thickening, or sonographic Murphy's sign.

Biliary System: Common bile duct measures 3 mm. No intrahepatic or extrahepatic ductal dilatation.

Pancreas: Visualized portion is unremarkable.

Kidneys:
Right: 11.6 cm longitudinally. Normal echotexture. No contour-deforming solid mass, stones, or hydronephrosis.
Left: 12.0 cm longitudinally. Normal echotexture. No contour-deforming solid mass, stones, or hydronephrosis.

Spleen: 8.6 cm. Normal in size and echotexture.

Aorta and Inferior Vena Cava: Unremarkable.

Other: No ascites evident.

Procedure Note

EXAM:
THORACIC SPINE RADIOGRAPHY

EXAM DATE: 5/11/2026 05:41 PM

CLINICAL HISTORY: Right sided thoracic back pain x 3 months, radiates anterior.

COMPARISON: None.

TECHNIQUE: 2 views.

FINDINGS:
Alignment: Normal. No spondylolisthesis or scoliosis.

Bones: No fractures or bone lesions.

Disks: Normal. Disk heights are maintained.

Soft Tissues: Normal. The visualized lungs and cardiomediastinal silhouette are normal.

Procedure Note

EXAM:
CERVICAL SPINE RADIOGRAPHY

EXAM DATE: 5/11/2026 05:41 PM

HISTORY: Thoracic back pain - right sided, + cervical maneuvers. Eval for facet disease and stability

COMPARISONS: None.

TECHNIQUE: AP, lateral neutral, flexion, extension, and bilateral oblique views.

FINDINGS:
Alignment: Normal. No spondylolisthesis or scoliosis. No abnormal motion with flexion or extension.

Bones: The cervical vertebral bodies and posterior elements are well visualized from the skull base through C7-T1.
No fractures or bone lesions.

Disks: Mild degenerative disk disease is present at C5-C6.

Facets: No degenerative disease. No significant facet arthropathy without osseous neural foraminal narrowing.

Soft Tissues: Normal. No prevertebral soft tissue swelling. The visualized lung apices are clear.

Procedure Note

Sarah Jane Spencer, PA-C - 05/11/2026 4:20 PM PDT
Formatting of this note might be different from the original.
Cervical Xrays to look at your neck

Thoracic Xrays just to recheck

Consider thoracic MRI

Meds:

Meloxicam will replace your ibuprofen (once a day) - start tomorrow
Cont tylenol if you want
For bedtime - gabapentin - nerve pain medication

NSAIDS

NSAIDS are non-steroidal anti-inflammatory medications.
Become familiar with these medications so that you do not take two of them at the same time.
Taking more than one at a time, or taking NSAIDs regularly for a long time increases your risk of side effects, including stomach irritation, ulcers, gastrointestinal bleeding, injury to the kidneys, and increased blood pressure.

Common over the counter NSAIDs: Ibuprofen (Advil and Motrin), Naproxen, (Naprosyn or Aleve), and Aspirin and Excedrin

Prescription NSAIDs: Naproxen, Diclofenac (Voltaren,) Meloxicam (Mobic,) Celecoxib (Celebrex,) Indomethacin (Indocin,) Etodolac and Ketorolac

NEW PATIENT VISIT

Name: Yvonne K Franklin
MRN: H002293035
Date of Service: 05/12/26
PCP: LEILANI PARAS, MD
Referring Provider: Referred, Self
The following note was created in conjunction with Nuance DAX Copilot Artificial Intelligence. Verbal consent given by patient to allow for recording and processing by DAX software.

Chief Complaint

Chief Complaint

Patient presents with

• / Back Pain

*Patient reports right sided thoracic back pain that started 2/14/26 while on a long drive. Lifting weight, slouching and sneezing exacerbates the pain. Xray 2/26/26 Optum. PT ATI Kirkland 2 sessions, then home exercises. Tylenol and Ibuprofen 3 times daily and helps with the pain. *

History of Present Illness
A 46-year-old female without prior spine history who presents for evaluation of right sided thoracic back pain.

Thoracic Back Pain
Thoracic back pain began 3 months ago, localized to the right side below the inferior border of the scapula, described as a sensation that something is lodged, consistently worse sneezing. Sneezing also causes pain to radiate laterally and wrap around to the abdominal region. Focal pain is aggravated to some extent by by twisting, sneezing, deep inspiration, lifting, and turning in bed. Occasionally radiates - as with sneezing and when the focal pain becomes severe. Symptoms occur daily and have improved minimally if at all. Ibuprofen and Tylenol provide temporary relief. She has tried 2 sessions of physical therapy, (though felt she could do the

exercises at home so she has been doing them on her own, without improvement). She has also tried stretching, resistance bands, Epsom salt baths, massage or manual pressure, and topical treatments without significant improvement. Husband tried applying tension and the pain seemed to shift. Pain disrupts sleep when turning in bed. Cyclobenzaprine may be helping with sleep, only taken at bedtime but does not help pain.

- Onset: Began 3 months ago.
- Location: Right side below the inferior border of the scapula, about an inch lateral to the spine.
- Duration: Persistent for 3 months, occurs daily, intensity varies.
- Character: Focal, boring at times, can radiate, especially after sneezing.
- Alleviating/Aggravating Factors: Aggravated by twisting, sneezing, deep inspiration, lifting, and turning in bed; ibuprofen and Tylenol provide temporary relief; cyclobenzaprine improves sleep but not pain; physical therapy, stretching, resistance bands, Epsom salt baths, massage, and topical treatments without significant improvement.
- Radiation: Radiates to mid-axillary region than anteriorly when severe or with sneezing.
- Timing: Disrupts sleep when turning in bed; occurs daily.

Neck Discomfort - not presenting symptom, though noted during exam, supported by hx
Recently developed neck discomfort with limited mobility, possibly related to sleeping position. She uses a neck pillow for support.

- Onset: Recently developed.
- Location: Neck.
- Character: Discomfort with limited mobility.
- Alleviating/Aggravating Factors: Possibly related to sleeping position; uses a neck pillow for support.

ROS: Relevant ROS is negative except as noted in HPI above.

Medications

Current Outpatient Medications:

• levonorgestrel (MIRENA IU), by Intrauterine route, Disp: , Rfl:

• omeprazole (PRILOSEC) 20 MG capsule, Take 40 mg by mouth daily, Disp: , Rfl:

• propranolol (INDERAL) 10 MG tablet, Take 10 mg by mouth as needed, Disp: , Rfl:

• SUMAtriptan (IMITREX) 100 MG tablet, Take 100 mg by mouth every 2 (two) hours as needed for Migraine, Disp: , Rfl:

• valACYclovir (VALTREX) 1000 MG tablet, Take 1,000 mg by mouth as needed, Disp: , Rfl:

• gabapentin (NEURONTIN) 300 MG capsule, Nightly for nerve pain Indications: neuropathic pain, Disp: 30 capsule, Rfl: 1

• meloxicam (MOBIC) 15 MG tablet, Take 1 tablet (15 mg t

otal) by mouth daily For pain, Disp: 30 tablet, Rfl: 1

Physical Exam

- General: Pleasant, alert, interactive female in no acute distress
- Spinal alignment physiologic; no obvious difficulty with transitions or exam
- Neurological: Gait steady and well-coordinated, no functional impairment, patient moves well without guarding
- Neck: No tenderness to palpation of cervical region - midline, facets, or paraspinals; pain elicited in mid cervical spine with flexion motion and thoracic pain reproduced with extension
- Musculoskeletal:
- Thoracic spine (right inferior scapular region T7-T9): Focal tenderness about an inch lateral to thoracic spine on the right; range of motion normal throughout. thoracic pain not triggered with axial rotation, lateral flexion, facet loading, flexion, or extension, nor is it triggered with motion of the shoulder girdle, active or resisted
- Cervical spine: No tenderness to palpation; pain appreciated in mid cervical spine with flexion motion and at presenting thoracic pain reproduced with extension and Spurlings
- Upper extremities (bilateral): Motor strength 5/5 throughout the uppers, including the shoulders; full rotation, normal / symmetrical motion in shoulder girdle; no pain with passive or active range of motion against resistance; sensation intact; reflexes 2+ bilaterally
- Other: Spurling's maneuver to the left reproduces thoracic pain; SI joint tests negative bilaterally

Diagnostics

None available

Results

Imaging

- X-ray of the thoracic spine: 03/2026 - by hx, unremarkable, no report or imaging available

- ray of ribs 2/26 also unremarkable

Assessment and Plan

Yvonne K Franklin is a 46 y.o. female with an approximate 3 month history of right infrascapular pain with minimal if any improvement. When severe or with sneezing, radiates - wrapping out laterally and into the abdominal region on the right. Exam notable for reproducibility with palpation and spurlings / cervicale extension.

History of radiation suggests thoracic nerve inflammation, while cervical exam / Spurlings and extension removers suggest referred pain from the cervical spine. This may also be a trigger point, given the general location, but radicular pain and cervical provocation indicate need to look more closely at the spine.

Cervical and repeat thoracic X-rays
Meloxicam to replace ibuprofen for simpler dosing
Methocarbamol to replace cyclobenzaprine for less sedation / daytime Rx
Gabapentin given radicular component - HS to help with sleep
Topicals okay +/- heat
Try trigger point - gentle - tennis ball - YTL exercises to both shoulders in supine
Avoid triggering actions
Consider trigger point therapy - manual okay for now - d/w pt, in an effort to find pain relief

Okay to continue PT exercises if not painful

Assessment & Plan

1. Thoracic back pain
Pain localized to right lower scapular region with radiation and focal tenderness, possible referred pattern from cervical spine. Symptoms persistent for 3 months despite stretching and physical therapy exercises along with a litany of supportive measures.

- Discussed possible etiologies, including trigger point or myofascial

pain, referred pain from cervical spine, or localized pathology in thoracic spine with radiating symptoms, or some combination therein. Reviewed risks of anti-inflammatories and nerve pain medications. Explained rationale for imaging and medication changes.

- Order cervical and thoracic spine x-rays. Consider thoracic MRI if x-rays are unremarkable and symptoms persist.
- Start meloxicam once daily to replace ibuprofen for ease of dosing. Continue Tylenol as needed. Start gabapentin at bedtime for nerve pain and sleep. Discontinue cyclobenzaprine to take methocarbamol during the day for muscle tension.

Consider tennis or soft-sh ball in supine for gentle myofascial release.
Consider Pepcid or Protonix if taking anti-inflammatories regularly.

Follow-up: Clinician will review x-ray results and contact patient via MyChart. Further follow-up based on imaging and response to medications.

I spent 5 minutes prior to the visit reviewing history, chart notes, imaging and talking to providers where necessary.
I spent 15 minutes examining the patient.
I spent 15 minutes discussing treatment options with the patient including treatments ranging from conservative to aggressive and invasive.
I spent 10 minutes writing orders for therapies addressing their problems and reviewing and writing their after visit summary
I spent 5 minutes updating the patient's record.

Total time 50minutes

Procedure: Trigger point injection, right
Date of study: 06/02/26
Machine: Sonosite HFL50 xp
Transducer: 15 mhz & 8mhz

Patient Name: Yvonne K Franklin
MRN: H002293035
Referring Provider: Spencer, Sarah Jane, PA-C

Subjective:Yvonne K Franklin is a 46 y.o. female with right **Myofascial pain on right side**

Chronic right-sided thoracic back pain

Upper back pain on right side

Myalgia

Description:
After informed written consent was obtained, the patient was positioned in a prone position.

2 muscles palpated (right rhomboid, latismuss dorsi) and trigger points identified. After cleansing with alcohol, all trigger point(s) instilled with 5 ml of 2% lidocaine using a 25 gauge needle.

No complications identified.

Needle was withdrawn, area cleansed and sterile adhesive placed. Patient monitored for 15 minutes post procedure.

Formatting of this note might be different from the original.
Please stop all NSAIDs while on steroids - 7 days

Medrol dose pack / steroid - pick up at pharmacy

Tylenol is fine

NSAIDS

NSAIDS are non-steroidal anti-inflammatory medications.
Become familiar with these medications so that you do not take two of them at the same time.
Taking more than one at a time, or taking NSAIDs regularly for a long time increases your risk of side effects, including stomach irritation, ulcers, gastrointestinal bleeding, injury to the kidneys, and increased blood pressure.

Common over the counter NSAIDs: Ibuprofen (Advil and Motrin), Naproxen, (Naprosyn or Aleve), and Aspirin and Excedrin

Prescription NSAIDs: Naproxen, Diclofenac (Voltaren,) Meloxicam (Mobic,) Celecoxib (Celebrex,) Indomethacin (Indocin,) Etodolac and Ketorolac

How to schedule an MRI:

Option 2 - Rayus:
Please call 206-524-5599 to schedule. They have several locations in the Seattle area including Kirkland, Bellevue, Seattle, Issaquah, Renton, Everett.

I'll call tomorrow and update you

The following note was created in conjunction with Nuance DAX Copilot Artificial Intelligence. Verbal consent given by patient to allow for recording and processing by DAX software.

Chief Complaint

Chief Complaint

Patient presents with

• / Back Pain

*Reports pain levels are worse. Looking for next steps. *

Records Reviewed:
Last ov 5/11/26 w/me -

1. Thoracic back pain
Pain localized to right lower scapular region with radiation and focal tenderness, possible referred pattern from cervical spine. Symptoms persistent for 3 months despite stretching and physical therapy exercises along with a litany of supportive measures.

- Discussed possible etiologies, including trigger point or myofascial pain, referred pain from cervical spine, or localized pathology in thoracic spine with radiating symptoms, or some combination therein. Reviewed risks of

anti-inflammatories and nerve pain medications. Explained rationale for imaging and medication changes.

- Order cervical and thoracic spine x-rays. Consider thoracic MRI if x-rays are unremarkable and symptoms persist.
- Start meloxicam once daily to replace ibuprofen for ease of dosing. Continue Tylenol as needed. Start gabapentin at bedtime for nerve pain and sleep. Discontinue cyclobenzaprine to take methocarbamol during the day for muscle tension.

Consider tennis or soft-sh ball in supine for gentle myofascial release.
Consider Pepcid or Protonix if taking anti-inflammatories regularly.

History of Present Illness
46-year-old female here today for trigger point injection follow up. Little to no improvement other than less anterior radiation. New symptoms include 2 day history of posterior / mid-axillary lower rib pain without identifiable trigger.

Since 06/12/2026, she developed intense, sudden-onset pain under the left rib upon waking that she compares to a fracture. Pain is localized, non-radiating, worsened by palpation and deep inspiration, and associated with stiffness in the thorax. Stretching has not relieved symptoms. She has not tried steroids in the past. She lifted luggage on 06/11/2026 but denies any pain at the time, reporting the luggage was not heavy. She mentions a healed fracture noted on previous imaging that she had been unaware of, denying prior history of similar symptoms.

For approximately 4 months, she has experienced right-sided symptoms, located medial and inferior to the right shoulder blade that had radiated anteriorly initially, now more focal. The new rib pain began about four days ago and remains unchanged. She denies numbness or tingling. She notes lower back discomfort now as a result of her symptoms, most appreciable when ascending stairs, but no tenderness is found on examination.

ROS: Relevant ROS is negative except as noted in HPI above.

Medications

Current Outpatient Medications:

- gabapentin (NEURONTIN) 300 MG capsule, Nightly for nerve pain Indications: neuropathic pain, Disp: 30 capsule, Rfl: 1
- levonorgestrel (MIRENA IU), by Intrauterine route, Disp: , Rfl:
- omeprazole (PRILOSEC) 20 MG capsule, Take 40 mg by mouth daily, Disp: , Rfl:
- propranolol (INDERAL) 10 MG tablet, Take 10 mg by mouth as needed, Disp: , Rfl:
- SUMAtriptan (IMITREX) 100 MG tablet, Take 100 mg by mouth every 2 (two) hours as needed for Migraine, Disp: , Rfl:
- valACYclovir (VALTREX) 1000 MG tablet, Take 1,000 mg by mouth as needed, Disp: , Rfl:
- methylPREDNISolone (MEDROL, PAK,) 4 mg tablet, follow package directions, Disp: 21 tablet, Rfl: 0

Diagnostics

Results
Reviewed imaging:

- X-ray of ribs: No displaced fracture. Negative rib series on R. Old fracture noted on Left.

Assessment and Plan

1. / **Thoracic radiculitis** / **MRI thoracic spine without contrast**

2. / Costochondral pain

]

Yvonne K Franklin is a 46 y.o. female with persistent infrascapular pain on the right and new posterior rib pain on the left, unclear etiology. Will obtain thoracic MRI to further evaluate given persistence of symptoms after 4 months. No improvement after trigger point. Prior cervical evaluation unremarkable other than referred pain with head rotation.

Assessment & Plan

1. Right-sided thoracic pain - infrascapular - not responsive to trigger point injection

Order thoracic spine MRI to evaluate soft tissue and structural causes as symptoms have not let up in 4 months.

2. Left-sided rib pain - unclear etiology
Severe, localized left rib pain began 06/13/2026, worsened by pressure, without trauma. X-rays and prior records reviewed.

- Prescribe 7-day Medrol Dosepak.
- Discontinue all NSAIDs including meloxicam while on steroids.
- Allow Tylenol and topical treatments for pain.
- Avoid stretching, deep tissue massage, and aggravating activities.

Reviewed steroid side effects. Stretching or deep tissue massage may worsen symptoms.

Follow-up: Follow up after MRI. No specific interval scheduled.

Plan of Treatment

Instructions

Instruction Type	Instructions
Patient	Please stop all NSAIDs while on steroids - 7 days Medrol dose pack / steroid - pick up at pharmacy Tylenol is fine NSAIDS NSAIDS are non-steroidal anti-inflammatory medications. Become familiar with these medications so that you do not take two of them at the same time. Taking more than one at a time, or taking NSAIDs regularly for a long time increases your risk of side effects, including stomach irritation, ulcers, gastrointestinal bleeding, injury to the kidneys, and increased blood pressure. Common over the counter NSAIDs: Ibuprofen (Advil and Motrin), Naproxen, (Naprosyn or Aleve), and Aspirin and Excedrin Prescription NSAIDs: Naproxen, Diclofenac (Voltaren,) Meloxicam (Mobic,) Celecoxib (Celebrex,) Indomethacin (Indocin,) Etodolac and Ketorolac How to schedule an MRI: Option 2 - Rayus: Please call 206-524-5599 to schedule. They have several locations in the Seattle area including Kirkland, Bellevue, Seattle, Issaquah, Renton, Everett. I'll call tomorrow and update you

Patient Instructions

• Patient Instructions

Sarah Jane Spencer, PA-C - 07/09/2026 8:40 AM PDT
Formatting of this note might be different from the original.
How to schedule an MRI:

Option 1 - Overlake:
Please call (425) 688-5700 Option 2 for Scheduling. The MRI will take place at Overlake Bellevue Medical Imaging.

Address:
1135 116th Ave NE
Suite 110
Bellevue, WA 98004

Use the north campus entrance and follow signs to park in Garage 3. Take the elevators or staircase down to the first floor. They are directly down the hall next to Walgreens.

Treatment Plan:
- A CT scan of your abdomen and pelvis has been ordered urgently to look for possible causes, including cancer or other conditions. Referrals sent to Overlake and faxed to the facilities you requested.
- While I have not heard back from your primary care doctor, she has been contacted to help coordinate your care and decide on the next steps. She has my cell phone. I will contact you after I speak with her, and either way I will touch baser with you by the end of the day.

Follow-Up Instructions:
- Call the imaging center at 425-688-5700 to schedule your CT scan as soon as possible. Let them know your scan has been ordered "stat" (urgent).
- If you have trouble scheduling the CT scan quickly, let your doctor know so they can help you find another location.
- After your CT scan, follow up with your primary care doctor to review the results and discuss further care.

Chief Complaint

Chief Complaint

Patient presents with

• / Follow-up

*Patient here for an MRI review. Reports left sided thoracic back pain. Feels are that had TPI feels better. Looking for next steps. *

Records Reviewed:
Summarized from her Initial visit 5/11/26

46-year-old female with an approximately 3-month history of persistent right infrascapular pain with little to no improvement despite stretching, physical therapy exercises, and multiple supportive treatments. The pain is localized to the right lower scapular region and becomes more pronounced with certain movements and sneezing, at which time it radiates laterally around the right side of the chest wall and into the right abdominal region. On examination, the pain is reproducible with focal palpation over the affected area and is also provoked by cervical extension and a positive Spurling maneuver.
The distribution of symptoms raises concern for thoracic nerve irritation or inflammation, while the reproduction of symptoms with cervical spine provocative testing suggests a possible cervical radicular or referred pain component. A myofascial trigger point remains a consideration given the location and focal tenderness; however, the radicular characteristics of the pain and cervical examination findings warrant further evaluation of the cervical and thoracic spine.
The differential diagnosis, including trigger point/myofascial pain, referred pain from cervical spine pathology, thoracic spine pathology with radiating symptoms, or a combination of these factors, was reviewed with the patient. Given the persistence of symptoms and lack of meaningful improvement with conservative measures, cervical and thoracic spine radiographs were ordered, with consideration for thoracic MRI if x-rays are unrevealing and symptoms continue.
.

History of Present Illness
Yvonne presents today for follow up on her MRI. She is accompanied by her husband. She continues to report thoracic back pain. MRI revealed compression deformities and infiltration involving multiple thoracic vertebrae. She denies additional symptoms and is otherwise healthy. reports good overall health.

ROS: Relevant ROS is negative except as noted in HPI above.

Assessment and Plan

Yvonne K Franklin is a 47 y.o. female an approximate 4 - 5 month history of thoracic back pain here today to follow up on her MRI. Questions were answered to the best of my ability. CT of the chest, abdomen, and pelvis ordered. I reached out by phone and Epic messaging to notify her PCP. Pt has made an appointment with her to discuss this further.

In order to reduce pain and provide her spine with more stability, I will order a TLSO - this will be through Cornerstone, to be worn during the day when out of bed. At all times during the day if tolerated. A TLSO is medically necessary to stabilize the spine in order to decrease mobility and pain in the spine / trunk.

Assessment & Plan

1. **Multiple pathologic compression fractures throughout the thoracic spine concerning for metastatic process from unknown primary**
CT Chest abdomen pelvis ordered stat.
Notified PCP of findings - pt has appt tomorrow.
Patient made appt with PCP to follow up on findings.
TLSO - which is medically necessary to stabilize the spine in order to decrease mobility and pain in the spine / trunk.

I spent 15 minutes prior to the visit reviewing history, chart notes, imaging and talking to providers where necessary.
I spent 15 minutes discussing findings and addressing, questions.

I spent 5 minutes writing orders reviewing and writing their after visit summary
I spent 5 minutes updating the patient's record.
Total time 40minutes

Appt for TLSO tentatively 7/15 @ Cornerstone Kirkland

Exam Date: **07/01/2026**
MRN: 109830432
DOB: 06/17/1979
Referring Phys.: Sarah Jane Spencer, PA

EXAM: MR THORACIC SPINE WITHOUT CONTRAST

HISTORY: 47-year-old female with back pain since mid February after injury in the left.

COMPARISON: None.

TECHNIQUE: Sagittal T1, T2, STIR and axial T2 sequences.

FINDINGS:
There is diffusely heterogeneous T1 hypointense and multifocal T2 hyperintense hypointense marrow signal. This includes 2.3 x 2.3 cm expansile lesion in T5 with smooth cortical remodeling and fluid-fluid levels suggestive of aneurysmal bone cystlike lesion. Similar lesions seen in T1, T8, T9, T10.
There is a 1.2 x 1.1 cm expansile T1 isointense, T2 hyperintense lesion in the posterior elements of T10 with endosteal scalloping, 7:17.
There compression deformities of T1, T4, T5, and T8 vertebral bodies.
No disc herniation or spinal canal narrowing is seen. There is mild bilateral neural foraminal narrowing at T8-9 secondary to bony expansion.
Mild facet arthropathy seen in the lower lumbar spine.

In the visualized posterior right liver there is a 1.8 cm ovoid T2 hyperintense mass, 7:33. Millimetric T2 hyperintense focus in the posterior left kidney is too small to characterize, statistically likely cyst.

Normal spinal cord morphology and signal is seen.

IMPRESSION:
Diffusely heterogeneous T1 hypointense and multifocal T2 hyperintense marrow signal including 2.3 x 2.3 cm expansile aneurysmal bone cyst like lesion in T5 vertebral body and similar lesions in T1, T8, T9, T10 and vertebral bodies, as well as 1.2 x 1.1 cm expansile T1 isointense, T2 hyperintense lesion in the posterior elements of T10. Additionally there is a 1.8 cm ovoid T2 hyperintense mass in the visualized posterior right liver lobe. While multiple aneurysmal bone cysts is a small possibility, the appearance is highly concerning for metastases from unknown primary. Recommend CT chest, abdomen and pelvis with contrast or PET/CT for further evaluation.
Compression deformities of T1, T4, T5 and T8 vertebral bodies which may be pathologic.

Mild bilateral neural foraminal narrowing at T8-9 secondary to bony expansion.

Interpreting Physician
Wonsuk Kim M.D.
Final Report Electronically Signed: 7/8/26 1:02 pm PT

EXAM:
CERVICAL SPINE RADIOGRAPHY
EXAM DATE: 5/11/2026 05:41 PM
HISTORY: Thoracic back pain - right sided, + cervical maneuvers. Eval for facet disease and stability
COMPARISONS: None.
TECHNIQUE: AP, lateral neutral, flexion, extension, and bilateral oblique views.
FINDINGS:

Alignment: Normal. No spondylolisthesis or scoliosis. No abnormal motion with flexion or extension.
Bones: The cervical vertebral bodies and posterior elements are well visualized from the skull base through C7-T1. No fractures or bone lesions.

Disks: Mild degenerative disk disease is present at C5-C6.
Facets: No degenerative disease. No significant facet arthropathy without osseous neural foraminal narrowing.
Soft Tissues: Normal. No prevertebral soft tissue swelling. The visualized lung apices are clear.
IMPRESSION:
Mild degenerative disk disease at C5-C6. No significant facet arthropathy or osseous neural foraminal narrowing.
No abnormal motion with flexion or extension.

Note from Overlake Hospital Medical Center

This document contains information that was shared with Yvonne K Franklin. It may not contain the entire record from Overlake Hospital Medical Center.

Allergies

Fentanyl (Other (See Comments))

Propofol (Other (See Comments))

Medications

SUMAtriptan (IMITREX) 100 MG tablet
Take 100 mg by mouth every 2 (two) hours as needed for Migraine

levonorgestrel (MIRENA IU)
by Intrauterine route

propranolol (INDERAL) 10 MG tablet
Take 10 mg by mouth as needed

valACYclovir (VALTREX) 1000 MG tablet
Take 1,000 mg by mouth as needed

Active Problems

No known active problems

EXAM:
THORACIC SPINE RADIOGRAPHY

EXAM DATE: 5/11/2026 05:41 PM

CLINICAL HISTORY: Right sided thoracic back pain x 3 months, radiates anterior.

COMPARISON: None.

TECHNIQUE: 2 views.

FINDINGS:
Alignment: Normal. No spondylolisthesis or scoliosis.

Bones: No fractures or bone lesions.

Disks: Normal. Disk heights are maintained.

Soft Tissues: Normal. The visualized lungs and cardiomediastinal silhouette are normal.

Procedure Note

EXAM:
ABDOMEN ULTRASOUND

EXAM DATE: 09/13/2021 08:12 AM.

CLINICAL HISTORY: 42-year-old female with change in bowel habits and dysphagia, please evaluate.

COMPARISON: None.

TECHNIQUE: Real-time scanning was performed with static images obtained.

FINDINGS:
Liver: Normal in size and echotexture measuring 15.8 cm in length. No suspicious liver mass evident. The liver contour is smooth.
Main portal vein flow: Hepatopetal.

Gallbladder: Normal in appearance. No stones, wall thickening, or sonographic Murphy's sign.

Biliary System: Common bile duct measures 3 mm. No intrahepatic or extrahepatic ductal dilatation.

Pancreas: Visualized portion is unremarkable.

Kidneys:
Right: 11.6 cm longitudinally. Normal echotexture. No contour-deforming solid mass, stones, or hydronephrosis.
Left: 12.0 cm longitudinally. Normal echotexture. No contour-deforming solid mass, stones, or hydronephrosis.

Spleen: 8.6 cm. Normal in size and echotexture.

Aorta and Inferior Vena Cava: Unremarkable.

Other: No ascites evident.

Procedure Note

EXAM:
THORACIC SPINE RADIOGRAPHY

EXAM DATE: 5/11/2026 05:41 PM

CLINICAL HISTORY: Right sided thoracic back pain x 3 months, radiates anterior.

COMPARISON: None.

TECHNIQUE: 2 views.

FINDINGS:
Alignment: Normal. No spondylolisthesis or scoliosis.

Bones: No fractures or bone lesions.

Disks: Normal. Disk heights are maintained.

Soft Tissues: Normal. The visualized lungs and cardiomediastinal silhouette are normal.

Procedure Note

EXAM:
CERVICAL SPINE RADIOGRAPHY

EXAM DATE: 5/11/2026 05:41 PM

HISTORY: Thoracic back pain - right sided, + cervical maneuvers. Eval for facet disease and stability

COMPARISONS: None.

TECHNIQUE: AP, lateral neutral, flexion, extension, and bilateral oblique views.

FINDINGS:
Alignment: Normal. No spondylolisthesis or scoliosis. No abnormal motion with flexion or extension.

Bones: The cervical vertebral bodies and posterior elements are well visualized from the skull base through C7-T1. No fractures or bone lesions.

Disks: Mild degenerative disk disease is present at C5-C6.

Facets: No degenerative disease. No significant facet arthropathy without osseous neural foraminal narrowing.

Soft Tissues: Normal. No prevertebral soft tissue swelling. The visualized lung apices are clear.

Procedure Note

EXAM:
ABDOMEN ULTRASOUND

EXAM DATE: 09/13/2021 08:12 AM.

CLINICAL HISTORY: 42-year-old female with change in bowel habits and dysphagia, please evaluate.

COMPARISON: None.

TECHNIQUE: Real-time scanning was performed with static images obtained.

FINDINGS:
Liver: Normal in size and echotexture measuring 15.8 cm in length. No suspicious liver mass evident. The liver contour is smooth.
Main portal vein flow: Hepatopetal.

Gallbladder: Normal in appearance. No stones, wall thickening, or sonographic Murphy's sign.

Biliary System: Common bile duct measures 3 mm. No intrahepatic or extrahepatic ductal dilatation.

Pancreas: Visualized portion is unremarkable.

Kidneys:
Right: 11.6 cm longitudinally. Normal echotexture. No contour-deforming solid mass, stones, or hydronephrosis.
Left: 12.0 cm longitudinally. Normal echotexture. No contour-deforming solid mass, stones, or hydronephrosis.

Spleen: 8.6 cm. Normal in size and echotexture.

Aorta and Inferior Vena Cava: Unremarkable.

Other: No ascites evident.

Patient Instructions
Sarah Jane Spencer, PA-C - 07/09/2026 8:40 AM PDT
Formatting of this note might be different from the original.
How to schedule an MRI:

Option 1 - Overlake:
Please call (425) 688-5700 Option 2 for Scheduling. The MRI will take place at Overlake Bellevue Medical Imaging.

Address:
1135 116th Ave NE
Suite 110
Bellevue, WA 98004

Use the north campus entrance and follow signs to park in Garage 3. Take the elevators or staircase down to the first floor. They are directly down the hall next to Walgreens.

Treatment Plan:
- A CT scan of your abdomen and pelvis has been ordered urgently to look for possible causes, including cancer or other conditions. Referrals sent to Overlake and faxed to the facilities you requested.
- While I have not heard back from your primary care doctor, she has been contacted to help coordinate your care and decide on the next steps. She has my cell phone. I will contact you after I speak with her, and either way I will touch baser with you by the end of the day.

Follow-Up Instructions:
- Call the imaging center at 425-688-5700 to schedule your CT scan as soon as possible. Let them know your scan has been ordered "stat" (urgent).
- If you have trouble scheduling the CT scan quickly, let your doctor know so they can help you find another location.
- After your CT scan, follow up with your primary care doctor to review the results and discuss further care.

Chief Complaint

[table#2]:
Chief Complaint
Patient presents with
•	Follow-up
		*Patient here for an MRI review. Reports left sided thoracic back pain. Feels are that had TPI feels better. Looking for next steps. *

Records Reviewed:
Summarized from her Initial visit 5/11/26

46-year-old female with an approximately 3-month history of persistent right infrascapular pain with little to no improvement despite stretching, physical therapy exercises, and multiple supportive treatments. The pain is localized to the right lower scapular region and becomes more pronounced with certain movements and sneezing, at which time it radiates laterally around the right side of the chest wall and into the right abdominal region. On examination, the pain is reproducible with focal palpation over the affected area and is also provoked by cervical extension and a positive Spurling maneuver.
The distribution of symptoms raises concern for thoracic nerve irritation or inflammation, while the reproduction of symptoms with cervical spine provocative testing suggests a possible cervical radicular or referred pain component. A myofascial trigger point remains a consideration given the location and focal tenderness; however, the radicular characteristics of the pain and cervical examination findings warrant further evaluation of the cervical and thoracic spine.
The differential diagnosis, including trigger point/myofascial pain, referred pain from cervical spine pathology, thoracic spine pathology with radiating symptoms, or a combination of these factors, was reviewed with the patient. Given the persistence of symptoms and lack of meaningful improvement with conservative measures, cervical and thoracic spine radiographs were ordered, with consideration for thoracic MRI if x-rays are unrevealing and symptoms continue.
.

History of Present Illness
Yvonne presents today for follow up on her MRI. She is accompanied by her husband. She continues to report thoracic back pain. MRI revealed compression deformities and infiltration involving multiple thoracic vertebrae. She denies additional symptoms and is otherwise healthy. reports good overall health.

ROS: Relevant ROS is negative except as noted in HPI above.

Medications

Current Outpatient Medications:

Assessment and Plan

Yvonne K Franklin is a 47 y.o. female an approximate 4 - 5 month history of thoracic back pain here today to follow up on her MRI. Questions were answered to the best of my ability. CT of the chest, abdomen, and pelvis ordered. I reached out by phone and Epic messaging to notify her PCP. Pt has made an appointment with her to discuss this further.

In order to reduce pain and provide her spine with more stability, I will order a TLSO - this will be through Cornerstone, to be worn during the day when out of bed. At all times during the day if tolerated. A TLSO is medically necessary to stabilize the spine in order to decrease mobility and pain in the spine / trunk.

Assessment & Plan
1. **Multiple pathologic compression fractures throughout the thoracic spine concerning for metastatic process from unknown primary**
CT Chest abdomen pelvis ordered stat.
Notified PCP of findings - pt has appt tomorrow.
Patient made appt with PCP to follow up on findings.
TLSO - which is medically necessary to stabilize the spine in order to decrease mobility and pain in the spine / trunk.

I spent 15 minutes prior to the visit reviewing history, chart notes, imaging and talking to providers where necessary.
I spent 15 minutes discussing findings and addressing, questions.
I spent 5 minutes writing orders reviewing and writing their after visit summary
I spent 5 minutes updating the patient's record.
Total time 40minutes

Appt for TLSO tentatively 7/15 @ Cornerstone Kirkland

Please stop all NSAIDs while on steroids - 7 days

Medrol dose pack / steroid - pick up at pharmacy

Tylenol is fine

NSAIDS

NSAIDS are non-steroidal anti-inflammatory medications.
Become familiar with these medications so that you do not take two of them at the same time.
Taking more than one at a time, or taking NSAIDs regularly for a long time increases your risk of side effects, including stomach irritation, ulcers, gastrointestinal bleeding, injury to the kidneys, and increased blood pressure.

Common over the counter NSAIDs: Ibuprofen (Advil and Motrin), Naproxen, (Naprosyn or Aleve), and Aspirin and Excedrin

Prescription NSAIDs: Naproxen, Diclofenac (Voltaren,) Meloxicam (Mobic,) Celecoxib (Celebrex,) Indomethacin (Indocin,) Etodolac and Ketorolac

How to schedule an MRI:

Option 2 - Rayus:
Please call 206-524-5599 to schedule. They have several locations in the Seattle area including Kirkland, Bellevue, Seattle, Issaquah, Renton, Everett.

I'll call tomorrow and update you

[table#1]:
Chief Complaint

[table#2]:
Chief Complaint
Patient presents with
•	Back Pain
		*Reports pain levels are worse. Looking for next steps. *

Records Reviewed:
Last ov 5/11/26 w/me -

1. Thoracic back pain
Pain localized to right lower scapular region with radiation and focal tenderness, possible referred pattern from cervical spine. Symptoms persistent for 3 months despite stretching and physical therapy exercises along with a litany of supportive measures.
- Discussed possible etiologies, including trigger point or myofascial pain, referred pain from cervical spine, or localized pathology in thoracic spine with radiating symptoms, or some combination therein. Reviewed risks of anti-inflammatories and nerve pain medications. Explained rationale for imaging and medication changes.
- Order cervical and thoracic spine x-rays. Consider thoracic MRI if x-rays are unremarkable and symptoms persist.
- Start meloxicam once daily to replace ibuprofen for ease of dosing. Continue Tylenol as needed. Start gabapentin at bedtime for nerve pain and sleep. Discontinue cyclobenzaprine to take methocarbamol during the day for muscle tension.
Consider tennis or soft-sh ball in supine for gentle myofascial release.
Consider Pepcid or Protonix if taking anti-inflammatories regularly.

History of Present Illness
46-year-old female here today for trigger point injection follow up. Little to no improvement other than less anterior radiation. New symptoms include 2 day history of posterior / mid-axillary lower rib pain without identifiable trigger.

Since 06/12/2026, she developed intense, sudden-onset pain under the left rib upon waking that she compares to a fracture. Pain is localized, non-radiating, worsened by palpation and deep inspiration, and associated with stiffness in the thorax. Stretching has not relieved symptoms. She has not tried steroids in the past. She lifted luggage on 06/11/2026 but denies any pain at the time, reporting the luggage was not heavy. She mentions a healed fracture noted on previous imaging that she had been unaware of, denying prior history of similar symptoms.

For approximately 4 months, she has experienced right-sided symptoms, located medial and inferior to the right shoulder blade that had radiated anteriorly initially, now more focal. The new rib pain began about four days ago and remains unchanged. She denies numbness or tingling. She notes lower back discomfort now as a result of her symptoms, most appreciable when ascending stairs, but no tenderness is found on examination.

ROS: Relevant ROS is negative except as noted in HPI above.

Medications

Current Outpatient Medications:
• gabapentin (NEURONTIN) 300 MG capsule, Nightly for nerve pain Indications: neuropathic pain, Disp: 30 capsule, Rfl: 1

[table#7]:
Assessment and Plan

[table#8]:
1.	**Thoracic radiculitis **	**MRI thoracic spine without contrast**
2.	Costochondral pain	
]
Yvonne K Franklin is a 46 y.o. female with persistent infrascapular pain on the right and new posterior rib pain on the left, unclear etiology. Will obtain thoracic MRI to further evaluate given persistence of symptoms after 4 months. No improvement after trigger point. Prior cervical evaluation unremarkable other than referred pain with head rotation.
Assessment & Plan
1. Right-sided thoracic pain - infrascapular - not responsive to trigger point injection

Order thoracic spine MRI to evaluate soft tissue and structural causes as symptoms have not let up in 4 months.

2. Left-sided rib pain - unclear etiology
Severe, localized left rib pain began 06/13/2026, worsened by pressure, without trauma. X-rays and prior records reviewed.
- Prescribe 7-day Medrol Dosepak.
- Discontinue all NSAIDs including meloxicam while on steroids.
- Allow Tylenol and topical treatments for pain.
- Avoid stretching, deep tissue massage, and aggravating activities.

Reviewed steroid side effects. Stretching or deep tissue massage may worsen symptoms.

Follow-up: Follow up after MRI. No specific interval scheduled.

[table#1]:
| ***PROCEDURE NOTE -***
TRIGGER POINT INJECTION |
| --- |
** **

Procedure: Trigger point injection, right
Date of study: 06/02/26
Machine: Sonosite HFL50 xp
Transducer: 15 mhz & 8mhz

**Patient Name: **Yvonne K Franklin
MRN: H002293035
Referring Provider: Spencer, Sarah Jane, PA-C

Subjective:Yvonne K Franklin is a 46 y.o. female with right **Myofascial pain on right side**

Chronic right-sided thoracic back pain

Upper back pain on right side

Myalgia

Description:
After informed written consent was obtained, the patient was positioned in a prone position.

2 muscles palpated (right rhomboid, latismuss dorsi) and trigger points identified. After cleansing with alcohol, all trigger point(s) instilled with 5 ml of 2% lidocaine using a 25 gauge needle.

No complications identified.

Needle was withdrawn, area cleansed and sterile adhesive placed. Patient monitored for 15 minutes post procedure.

This result has an attachment that is not available.
EXAM:
THORACIC SPINE RADIOGRAPHY

EXAM DATE: 5/11/2026 05:41 PM

CLINICAL HISTORY: Right sided thoracic back pain x 3 months, radiates anterior.

COMPARISON: None.

TECHNIQUE: 2 views.

FINDINGS:
Alignment: Normal. No spondylolisthesis or scoliosis.

Bones: No fractures or bone lesions.

Disks: Normal. Disk heights are maintained.

Soft Tissues: Normal. The visualized lungs and cardiomediastinal silhouette are normal.

Procedure Note

This result has an attachment that is not available.

EXAM:
CERVICAL SPINE RADIOGRAPHY

EXAM DATE: 5/11/2026 05:41 PM

HISTORY: Thoracic back pain - right sided, + cervical maneuvers. Eval for facet disease and stability

COMPARISONS: None.

TECHNIQUE: AP, lateral neutral, flexion, extension, and bilateral oblique views.

FINDINGS:
Alignment: Normal. No spondylolisthesis or scoliosis. No abnormal motion with flexion or extension.

Bones: The cervical vertebral bodies and posterior elements are well visualized from the skull base through C7-T1. No fractures or bone lesions.

Disks: Mild degenerative disk disease is present at C5-C6.

Facets: No degenerative disease. No significant facet arthropathy without osseous neural foraminal narrowing.

Soft Tissues: Normal. No prevertebral soft tissue swelling. The visualized lung apices are clear.

Procedure Note

Cervical Xrays to look at your neck

Thoracic Xrays just to recheck

Consider thoracic MRI

Meds:

Meloxicam will replace your ibuprofen (once a day) - start tomorrow
Cont tylenol if you want
For bedtime - gabapentin - nerve pain medication

NSAIDS

NSAIDS are non-steroidal anti-inflammatory medications.
Become familiar with these medications so that you do not take two of them at the same time.
Taking more than one at a time, or taking NSAIDs regularly for a long time increases your risk of side effects, including stomach irritation, ulcers, gastrointestinal bleeding, injury to the kidneys, and increased blood pressure.

Common over the counter NSAIDs: Ibuprofen (Advil and Motrin), Naproxen, (Naprosyn or Aleve), and Aspirin and Excedrin

Prescription NSAIDs: Naproxen, Diclofenac (Voltaren,) Meloxicam (Mobic,) Celecoxib (Celebrex,) Indomethacin (Indocin,) Etodolac and Ketorolac

NEW PATIENT VISIT

Name: Yvonne K Franklin
MRN: H002293035
Date of Service: 05/12/26
PCP: LEILANI PARAS, MD
Referring Provider: Referred, Self
The following note was created in conjunction with Nuance DAX Copilot Artificial Intelligence. Verbal consent given by patient to allow for recording and processing by DAX software.

[table#1]:
Chief Complaint

[table#2]:
Chief Complaint
Patient presents with
•	Back Pain
		*Patient reports right sided thoracic back pain that started 2/14/26 while on a long drive. Lifting weight, slouching and sneezing exacerbates the pain. Xray 2/26/26 Optum. PT ATI Kirkland 2 sessions, then home exercises. Tylenol and Ibuprofen 3 times daily and helps with the pain. *

History of Present Illness
A 46-year-old female without prior spine history who presents for evaluation of right sided thoracic back pain.

Thoracic Back Pain
Thoracic back pain began 3 months ago, localized to the right side below the inferior border of the scapula, described as a sensation that something is lodged, consistently worse sneezing. Sneezing also causes pain to radiate laterally and wrap around to the abdominal region. Focal pain is aggravated to some extent by by twisting, sneezing, deep inspiration, lifting, and turning in bed. Occasionally radiates - as with sneezing and when the focal pain becomes severe. Symptoms occur daily and have improved minimally if at all. Ibuprofen and Tylenol provide temporary relief. She has tried 2 sessions of physical therapy, (though felt she could do the exercises at home so she has been doing them on her own, without improvement). She has also tried stretching, resistance bands, Epsom salt baths, massage or manual pressure, and topical treatments without significant improvement. Husband tried applying tension and the pain seemed to shift. Pain disrupts sleep when turning in bed. Cyclobenzaprine may be helping with sleep, only taken at bedtime but does not help pain.
- Onset: Began 3 months ago.
- Location: Right side below the inferior border of the scapula, about an inch lateral to the spine.
- Duration: Persistent for 3 months, occurs daily, intensity varies.
- Character: Focal, boring at times, can radiate, especially after sneezing.
- Alleviating/Aggravating Factors: Aggravated by twisting, sneezing, deep inspiration, lifting, and turning in bed; ibuprofen and Tylenol provide temporary relief; cyclobenzaprine improves sleep but not pain; physical therapy, stretching, resistance bands, Epsom salt baths, massage, and topical treatments without significant improvement.
- Radiation: Radiates to mid-axillary region than anteriorly when severe or with sneezing.
- Timing: Disrupts sleep when turning in bed; occurs daily.

Neck Discomfort - not presenting symptom, though noted during exam, supported by hx
Recently developed neck discomfort with limited mobility, possibly related to sleeping position. She uses a neck pillow for support.
- Onset: Recently developed.
- Location: Neck.
- Character: Discomfort with limited mobility.
- Alleviating/Aggravating Factors: Possibly related to sleeping position; uses a neck pillow for support.

ROS: Relevant ROS is negative except as noted in HPI above.

Medications

Current Outpatient Medications:
• levonorgestrel (MIRENA IU), by Intrauterine route, Disp: , Rfl:
• omeprazole (PRILOSEC) 20 MG capsule, Take 40 mg by mouth daily, Disp: , Rfl:
• propranolol (INDERAL) 10 MG tablet, Take 10 mg by mouth as needed, Disp: , Rfl:
• SUMAtriptan (IMITREX) 100 MG tablet, Take 100 mg by mouth every 2 (two) hours as needed for Migraine, Disp: , Rfl:

Physical Exam
- General: Pleasant, alert, interactive female in no acute distress
- Spinal alignment physiologic; no obvious difficulty with transitions or exam
- Neurological: Gait steady and well-coordinated, no functional impairment, patient moves well without guarding
- Neck: No tenderness to palpation of cervical region - midline, facets, or paraspinals; pain elicited in mid cervical spine with flexion motion and thoracic pain reproduced with extension
- Musculoskeletal:
- Thoracic spine (right inferior scapular region T7-T9): Focal tenderness about an inch lateral to thoracic spine on the right; range of motion normal throughout. thoracic pain not triggered with axial rotation, lateral flexion, facet loading, flexion, or extension, nor is it triggered with motion of the shoulder girdle, active or resisted
- Cervical spine: No tenderness to palpation; pain appreciated in mid cervical spine with flexion motion and at presenting thoracic pain reproduced with extension and Spurlings
- Upper extremities (bilateral): Motor strength 5/5 throughout the uppers, including the shoulders; full rotation, normal / symmetrical motion in shoulder girdle; no pain with passive or active range of motion against resistance; sensation intact; reflexes 2+ bilaterally
- Other: Spurling's maneuver to the left reproduces thoracic pain; SI joint tests negative bilaterally

Results

Imaging
- X-ray of the thoracic spine: 03/2026 - by hx, unremarkable, no report or imaging available
- ray of ribs 2/26 also unremarkable

[table#7]:
Assessment and Plan

Yvonne K Franklin is a 46 y.o. female with an approximate 3 month history of right infrascapular pain with minimal if any improvement. When severe or with sneezing, radiates - wrapping out laterally and into the abdominal region on the right. Exam notable for reproducibility with palpation and spurlings / cervicale extension.

History of radiation suggests thoracic nerve inflammation, while cervical exam / Spurlings and extension removers suggest referred pain from the cervical spine. This may also be a trigger point, given the general location, but radicular pain and cervical provocation indicate need to look more closely at the spine.

Cervical and repeat thoracic X-rays
Meloxicam to replace ibuprofen for simpler dosing
Methocarbamol to replace cyclobenzaprine for less sedation / daytime Rx
Gabapentin given radicular component - HS to help with sleep
Topicals okay +/- heat
Try trigger point - gentle - tennis ball - YTL exercises to both shoulders in supine
Avoid triggering actions
Consider trigger point therapy - manual okay for now - d/w pt, in an effort to find pain relief
Okay to continue PT exercises if not painful

Assessment & Plan
1. Thoracic back pain
Pain localized to right lower scapular region with radiation and focal tenderness, possible referred pattern from cervical spine. Symptoms persistent for 3 months despite stretching and physical therapy exercises along with a litany of supportive measures.
- Discussed possible etiologies, including trigger point or myofascial
pain, referred pain from cervical spine, or localized pathology in thoracic spine with radiating symptoms, or some combination therein. Reviewed risks of anti-inflammatories and nerve pain medications. Explained rationale for imaging and medication changes.
- Order cervical and thoracic spine x-rays. Consider thoracic MRI if x-rays are unremarkable and symptoms persist.
- Start meloxicam once daily to replace ibuprofen for ease of dosing. Continue Tylenol as needed. Start gabapentin at bedtime for nerve pain and sleep. Discontinue cyclobenzaprine to take methocarbamol during the day for muscle tension.
Consider tennis or soft-sh ball in supine for gentle myofascial release.
Consider Pepcid or Protonix if taking anti-inflammatories regularly.

Follow-up: Clinician will review x-ray results and contact patient via MyChart. Further follow-up based on imaging and response to medications.

I spent 5 minutes prior to the visit reviewing history, chart notes, imaging and talking to providers where necessary.
I spent 15 minutes examining the patient.
I spent 15 minutes discussing treatment options with the patient including treatments ranging from conservative to aggressive and invasive.
I spent 10 minutes writing orders for therapies addressing their problems and reviewing and writing their after visit summary
I spent 5 minutes updating the patient's record.
Total time 50minutes

Results - documented in this encounter

Appointment for Abdomen Ultrasound (US ABDOMEN COMPLETE) - Final result (09/13/2021 8:12 AM PDT)

Anatomical Region	Laterality	Modality
Abdomen		Ultrasound

Specimen (Source)	Anatomical Location / Laterality	Collection Method / Volume	Collection Time	Received Time
			09/13/2021 8:12 AM PDT	

Impressions

09/13/2021 9:26 AM PDT

1. Normal abdominal ultrasound.
2. Specifically, normal-appearing gallbladder. No gallstones or biliary ductal dilation is seen.
3. No definitive cause for the patient's symptoms appreciated.

This result has an attachment that is not available.

EXAM:
ABDOMEN ULTRASOUND

EXAM DATE: 09/13/2021 08:12 AM.

CLINICAL HISTORY: 42-year-old female with change in bowel habits and dysphagia, please evaluate.

COMPARISON: None.

TECHNIQUE: Real-time scanning was performed with static images obtained.

FINDINGS:
Liver: Normal in size and echotexture measuring 15.8 cm in length. No suspicious liver mass evident. The liver contour is smooth.
Main portal vein flow: Hepatopetal.

Gallbladder: Normal in appearance. No stones, wall thickening, or sonographic Murphy's sign.

Biliary System: Common bile duct measures 3 mm. No intrahepatic or extrahepatic ductal dilatation.

Pancreas: Visualized portion is unremarkable.

Kidneys:
Right: 11.6 cm longitudinally. Normal echotexture. No contour-deforming solid mass, stones, or hydronephrosis.
Left: 12.0 cm longitudinally. Normal echotexture. No contour-deforming solid mass, stones, or hydronephrosis.

Spleen: 8.6 cm. Normal in size and echotexture.

Aorta and Inferior Vena Cava: Unremarkable.

Other: No ascites evident.

Procedure Note

Notes:
++++++++++++++++++++++++++++++++++++++

When you download your health or visit summary documents, several files are compressed into a single ZIP file so they can
be transferred quickly. You need to uncompress (unzip) this file before you can view your documents. Refer to steps below
for uncompressing your download. A PDF file was included with your download and provides the easiest way to view the
contents of this document. Your download also includes files in the IHE_XDM folder with names starting with 'DOC'.
These files let other healthcare software applications understand the data in the documents. If you chose to encrypt your
download, it will only remain encrypted until you unzip it. To continue protecting your data when you are done viewing
it, locate the unzipped folder and delete it.

How to uncompress your library:
++

Windows Instructions
If your download was not encrypted:
These steps assume that you use the features that come with your operating system.
You can also use another program, such as 7-Zip, to manage compressed files.
1. When you downloaded the document library, you selected a location for the library. Open that location with Windows Explorer.
2. Right-click the compressed file to open the shortcut menu.
3. Choose Extract All to open the Extraction Wizard.
4. Click Next.
5. Select a destination directory for the files. For example, you can enter C:\Lucy to create a Lucy folder for the documents.
6. Click Next. The files in your document library are uncompressed and created in the location you entered.

7. Click Finish to close the Extraction Wizard.
If your download was encrypted:
You need to use a program such as 7-Zip to unzip the file.
You can download 7-Zip here: https://www.7-zip.org/download.html

MacOS Instructions
If your download was not encrypted:
These steps assume that you use the features that come with your operating system.
You can also use another program, such as Stuffit Expander, to manage compressed files.
1. When you downloaded the document library, you selected a location for the library. Open that location.
2. Right-click the compressed file on your Desktop to open the shortcut menu.
3. Select Open. The files in your document library are uncompressed and appear in a folder on your Desktop.
If your download was encrypted:
You need to use a program such as Keka to unzip the file.
You can download Keka here: https://www.keka.io/

Linux Instructions
These steps are based on Ubuntu. Other distributions might have different steps.
1. When you downloaded the document library, you selected a location for the library. Open that location with Archive Manager.
2. Right-click the compressed file to open the shortcut menu.
3. Click Extract Here. The files in your document library are uncompressed and appear in the current working directory.
To extract files from a command line, enter unzip <filename>.zip.
If your download was encrypted:
You need to use a program such as p7zip to unzip the file.
You can download p7zip here: https://p7zip.sourceforge.net/
